We are gradually, and I think certainly, getting clear of the burnt quartz, to which I alluded in previous letters, although the fissure is still to be seen in part of the ledge. Having just struck a kind of ore different from any I have sent you, I forward some of it by express. The kind I allude to is that which somewhat resembles black lead in appearance. Some of the other ore in the package is, in slight particulars, different from any I have previously sent. I consider these specimens rich, but, in estimating their value, an assay will be worth much more than my opinion. The ledge shows more silver ore than it has done at any other point in our progress in the incline, which is thirty feet deep. [This incline was commenced twenty-five feet to the south of where the vein was first tapped by the tunnel, at a depth of two hundred and fifty feet from the surface.] The ledge is upwards of three feet in thickness. In the place where the quartz was most burnt, it narrowed down to about eighteen inches; but that was only for a short distance. At that point, the wall rock, as is usual in such cases, was quite hard. Throughout all that portion of the ledge exposed to view, it is admirably defined, uniform in its position and in its course, running north and south, and pitching west. The walls are perfect, and the seams of clay separating them from the ledge are never wanting. The wall rock is porphyry. The shale formations in the vicinity generally pitch to the east; and, so far as it has any stratification, the graywack pitches in the same direction. Of course in the porphyry we find nothing that can properly be called a stratification.

I need not say to the members of the Board that these facts indicate clearly that this is one of those much valued depositories of the precious metals, called "fissure veins"—the non-existence of which in this section profound blockheads (whose arrogance and pretension are equalled only by their misconception and ignorance of the *local* geology of the district) have made such a mystifying display of learning to prove.

In addition to the fact I have stated, there are numerous other evidences in favor of the belief that this is a regular fissure vein, while there is not even a solitary fact that appears to be incompatible with this view. Nor need I call the attention of the gentlemen, whose reading has been recent, to the consideration that the geological formation within and about the Tallulah claim is the same as that of the richest and most *reliable* silver mines in the world.

* * * * * * * * * *

I wish it distinctly understood that I make no pretension to that kind of knowledge which enables some men to express the most positive opinion upon every subject relating to mines and mining; but depending mainly upon that science which lingers closely around the point of a pick, and having just completed a careful review of the claim and of matters connected with it, I feel fully warranted in stating as true the following propositions—some of which, it will be observed, are matters of fact, and some of inference:

1. Neptune Hill has, on every side of it, an immense quantity of quartz boulders of great size, from which valuable specimens of various kinds of silver ore have been, and can be, obtained, although they are not nearly so rich as the quartz recently struck in the tunnel.

2. These boulders can, in many instances, be traced to ledges that project above the surface, while in other cases the debris covers the croppings.

3. The lode we are now working, and from which I have sent you a considerable number of specimens, which will enable you to judge of its character, contains a large quantity of ore, which can be profitably worked; and, as we sink upon it, we will doubtless find it larger and richer, especially after reaching the water line.

4. The lodes we have not yet reached will prove to be both large and rich.

5. The veins we passed through in the tunnel before striking the last, show sufficient mineral, and are of sufficient size, to warrant the opinion that they will prove valuable, when followed to a considerable depth; and the Mattie Wayne ledge, below the mouth of the tunnel, is also a lead of considerable promise, being regular and affording some tolerable specimens. It is worthy of remark that these veins all run and pitch in the same direction.

6. The vein on which we are now working, while undoubtedly valuable in itself, is still more important as being indicative of the character of the other veins in Neptune Hill.

7. The topography of the hill is admirably adapted to the thorough and convenient working of the mine to a great depth.

8. The supply of wood within a range of three miles, is sufficient to render fuel reasonably cheap during the next five years, and the river affords an ample power at a distance not exceeding six miles over a good road.

9. The climate is much superior to that of Virginia, Aurora, Silver Mountain or Reese River, and fresh water springs are very numerous and easy of access; while much of the sickness that prevails here is clearly attributable to excess and to carelessness.

10. The development, thus far, of the Tallulah mine shows it to be exceedingly valuable; and it is highly probable, further developments will prove it to be capable of enriching generations. * * *

When the company determines to erect a mill, there will be no difficulty in procuring a site, at a small cost—merely a nominal one, I think. Water privileges and town sites are too numerous to warrant the spending of much time in considering such propositions as have frequently been presented to me since my arrival here. * * The company can ereect a mill here almost as cheaply as in Virginia City. With a small expenditure, certainly not exceeding one hundred and twenty-five dollars, I can construct a machine that will enable me to use timber found here for nearly everything about a quartz mill, and being practically, as well as theoretically familiar with the constructing and erecting of machinery, including of course, the making of all necessary drawings and calculations, no expensive mechanics will be required. The sending of such mechanics to distant points to "boss" the various departments in the erection of such works, generally involves a heavy expenditure, and their presence is often the means of uselessly spending large sums of money.

* * * * * * * *

The best plan is to more thoroughly develop the the mine, and erect a small mill, say of ten stamps, which will not cost a large sum, and with the proceeds of that, additional works can be constructed without burthening the members of the company.

In a postscript added on January 27th Mr. Banks says:—

"Last night we found in the vein a very fine deposit of silver ore, of which I send you a large sample. This piece is part of a chunk that weighs about seventy-five pounds. * * Either this is the richest kind of silver ore, or the books are most outrageously at fault. It seems to be very abundant, although as yet we have had but one blast in it."

The ore last mentioned by Mr. Banks, and tested here by George W. Bell, gave $2,940.60 to the ton; the ore he compared to black lead, yielded $2,058.40 and the refuse, after the best specimens were selected, $1,131.00. In each instance the vein rock and mineral were crushed together. Two hundred grains of the black metal, unmixed with quartz, yielded twenty-eight grains and a fraction of silver: this is at the rate of $6,005.63 per ton. Tests have been made in Virginia City, with similar results, and mill tests made in Unionville, were almost equally favorable. The mineral is a double sulphuret of copper and silver, containing no gold. Since the letter quoted from was written, the incline has been sunk to a depth of sixty-one ft. below the level of the tunnel, or three hundred and eleven feet from the surface of the ground. The ledge has gradually increased in size until it is now four feet and a half thick, with the black metal so abundantly distributed throughout it,

that often, amidst the stuff thrown out by a blast, scarcely any quartz is visible. In the meantime the tunnel is being pushed steadily ahead towards the other ledges, which crop out on the top of the hill, and by the time these lines are published, Fall's mill at Unionville, and the Auld Lang Syne mill near Dunglen, will probably be employed in producing bars to gladden the eyes of the holders of Tallulah stock.

After perusing the above, our readers will scarcely be surprised to learn that the Tallulah claim has been thus far developed at a cost of about eight dollars per foot, in addition to the original sum paid for a controlling interest in it. Its development is a perfect marvel of successful and economical management, and presents a significant contrast to the waste and extravagance that have distinguished the working of other mines, which, notwithstanding a large production of gold and silver, are now so burthened with debts as to be almost valueless.

The works of the company would not discredit Gold Hill or Virginia, and it owns a very large quantity of standing timber. Such precautions, too, have been taken as to render any conflict of title impossible.

Finally, we imagine the public will agree with us, that it is scarcely possible that Providence has placed only one mine, with all the conveniences for working it, including water, wood, salt, saltpetre and nitre, in Sierra district or in Humboldt county.

Slang of the Stock Exchange.—We publish the following from an exchange for the benefit of the uninformed:

"A Bull" is one who buys stocks on speculation, thinking they will rise, so that he can sell at a profit. It is to his interest to have stocks rise, and he will resort to every means to bring about the desired result.

"A Bear" is one who buys stocks on speculation, thinking they will fall, so that he can buy in for less money to fill his contracts. It is to his interest to break down the market, and he will resort to the most desperate means to accomplish his object.

"A Coroner" is when the bears cannot buy or borrow the stock to deliver in fulfillment of their contracts.

"A Deposit" is earnest money, lodged in the hands of a third party as a guarantee. "5 up," "10 up," etc., is the language expressive of a deposit."

"Overloaded" is when the bulls cannot take and pay for the stocks they have purchased.

"Short" is when a person or party sells stocks when they have none, and expects to buy or borrow them in time to deliver.

"Long" is when a person or party has a plentiful supply of stock.

"A Flyer" is to buy some stock with a view to selling it in a few days, and either make or lose, as luck will have it.

"A Wash" is a pretended sale, by special agreement between the seller and buyer, for the purpose of getting a quotation reported.

The quantity of oil produced annually from the Pennsylvania oil wells, is estimated at from 1,000,000 to 1,800,000 barrels. The wells have been producing at this rate for about three years. The oil wells average from 450 to 500 feet in depth. The capacity of the wells may be judged from the fact that from the Maple Shade well has flowed for some time past 1,000 barrels of oil per day. Nearly half a million dollars' worth of oil has been taken from the wells on one farm alone. The present population of Oil Creek and the contiguous villages is estimated at 10,000 souls. The number of oil refineries in Oil City is 40, and many more are being constructed.—*Oil City Register.*

Downieville Burned.—The principal business portion of this town was destroyed by fire on the evening of the 27th ult. It is the third or fourth time the place has met with a similar fate. The Court House, and that part of the town containing family residences, escaped injury, being situated across the river, upon Durgan and Jersey Flats. The offices of the Sierra *Democrat* and the *Standard* were destroyed. Remembering the kind offer which came from the former office when we were suffering from a similar calamity, we cannot but extend its proprietor our heartiest sympathy.

On the Loss of Gold Attending the Process of Amalgamation.

However theories may differ as to the metallurgy of gold, no one pretends to deny that, for some reason or other, the ordinary process of amalgamation is attended with serious losses. It is a matter of great importance to discover whether these losses can be prevented by greater care in the use of amalgamating apparatus, or whether they are inherent and inevitable in the process itself.

There is no doubt that the rudeness of machinery, and the ignorance and carelessness of workmen are responsible for much of the evil; but the following discussion will show that amalgamation, under most favorable circumstances, fails to extract all the gold from any ore.

It is necessary first to mention what are the most favorable conditions for the action of quicksilver upon gold.

1. The ore should be finely pulverized, in order that no particle of gold may remain inclosed in pyrites, or other mineral, and shielded from the effects of the mercury.

2 The quicksilver should be present in sufficient quantity to leave no gold untouched.

3. The quicksilver should be thoroughly and carefully mixed with the ore, and rubbed into it, *forcing*, as it were, a union of the two.

4. If the gold be abundant, and in visible particles, the operation will be so much the easier and surer.

It is evident that the above conditions can never be so well realized as in the laboratory, and in the treatment of small quantities of rich ore. In accordance with this rule, a specimen of "Josephine" Mariposa ore was selected, in which native gold could be abundantly seen. A small quantity of this ore was pulverized until the diameter of the coarsest particles was less than one sixteenth of an inch, then carefully washed and amalgamated, being strained at last through new wash-leather. The amalgam finally obtained was undoubtedly all that could be produced by such a process, and twice as much as the ordinary results of operations on a large scale. The "tailings" were now subjected to a metallurgical process, and their contents in gold extracted. The gold having been also extracted from the amalgam, the experiment was complete. The results speak for themselves.

	Oz.	Dwt.	
I. Quantity of ore taken.....	7.	7.5	
II. Quantity of amalgam formed	0.	10.5	
III. Quantity of gold in amalgam..	0.	2.28@$17 per oz.,	$1.94
IV. Quantity of gold in tailings...	0.	1.61@$19 per oz.,	1.53
V Quantity of ore.....	0.	3.89	
			$3.47

The gold obtained by amalgamation being less pure than that which comes from metallurgical treatment, is worth $2 less per ounce. Hence it was afterward submitted to a refining process, with the following result:

	Dwt.
III. Gold in amalgam.....	2.28
VI. Gold from amalgam, after refining.....	1.97
Loss of impurities.....	0.31
This being substracted from the gross result V., leaves us	
VII. Amount of refined gold in the ore, 3.58 dwt., of which the	
VII. Proportion from amalgamation was 55 per cent.	
VIII. Proportion lost by amalgamation was 45 per cent.	
	100

The 7⅜ ounce of ore originally taken had been previously concentrated by washing, which accounts for the richness of the result. But the richest ore must offer the best opportunity for amalgamation; therefore, the foregoing discussion demonstrates that amalgamation can not reach more than fifty-five per cent. of the gold *in a rich ore*, while the proportional yield under less favorable circumstances would be greatly diminished.

Experiments of this nature give strong if not conclusive evidence that much of the gold contained in sulphurets is itself a sulphuret, and not, as some chemists assert, merely in mechanical mixture, and native. Without entering into a full discussion of this point, it is sufficient to say that no adequate explanation of the loss by amalgamation, so inevitable and constant, can be given, save this, that the gold is partially in chemical combinations, which quicksilver cannot disturb.

If this be true, no merely mechanical treatment will suffice for the extraction of gold; and gold mining will only attain its best development and highest success, when it falls back upon the resources of scientific metallurgy.—*N. Y. Stockholder.*

Precious Stones for the Sanitary Fair.—Mr. Leland, of the Occidental Hotel, forwarded by the last steamer a choice selection of mineral specimens from this coast, to be exhibited at the Great Sanitary Fund Fair in New York. After exhibition, they are to be sold for the benefit of the sick and wounded soldiers and sailors in our national hospitals.

WIDE WEST MINING COMPANY.

We have received a copy of the "Report of a Committee of Investigation Appointed by the Stockholders of the Wide West Mining Company, January 25, 1854," neatly issued in a pamphlet form of 16 pages from the office of the Mining and Scientific Press. The work is well written, plain and comprehensive. The report is divided into two parts: part 1st comprises a brief history of the mining and milling operations of the company, as collated from the correspondence of the officers from may 1st, 1863, to the 1st of Feb. 1864. Part 2d relates to the executive and financial management of the company, covering the period of time between May 14, and Dec. 31, 1863.

From the letter we learn that during the period referred to, two assessments have been levied from which an aggregate of $184,165.89 has been realized; while the present value of assets over the liabilities of the company, estimating the mill to be worth $100,000, amount to only $111,932.18; thus showing an actual amount of $82,233.71 as sunk or expended during the eight and a half months alluded to in working the mill and developing the mine.

The amount of bullion received from the mine during the time was 12,026.56 ounces, yielding a value of $47,708.02, or an aggregate value per ounce of $3.96⅔. To this is added a balance of $1,275.21 received from the proceeds of ore crushed from the the Western Summit Co. As to the future of the mine the report adds:—

The mill is in a good condition, and with a good supply of ore could be made to pay a handsome profit. As to the prospect of this supply being obtained, we must confess that we see no immediate hope of it, but are confident that all which can be done to secure this, will be done by your Superintendent.

That the mine has disappointed the wishes and expectations of all interested, needs no assurance from your Committee, and we feel reluctant to state what may be our views as to the prospective results to be obtained. That the course already adopted by the Superintendent, of sinking a shaft on the ledge in the tunnel, should be approved of, we have no doubt; but the management of the Company's affairs being already entrusted to a new Board, we deem any further suggestions from us uncalled for.

The term Reese River, says a correspondent of the *Alta*, is applied indiscriminately to a very large scope of country. The river itself is an insignificant stream, rising about fifty miles south of Austin, and running nearly due north for a distance of about ninety miles. It empties into a lake, and sinks, in its course passing about eight miles west of this place. On either side of this river, and running parallel to each other and to it, are two ranges of mountains: the one on the west is said to have been called by the Indians the Shosbone Mountains, and the one on the east the Toiabe. This latter range seems to contain by far the most extensive and richest mineral deposits. In it are located most of the rock districts of the country—such as the Amador, Reese River, Big Creek, Summit, Bunker Hill, Smoky Valley, and others. That this mineral belt is very rich, there is not a particle of doubt; that it is the most extensive and richest yet discovered in Nevada Territory, I positively believe.

The Rush to the "Next Place."—Who is going to remain in Oroville? If all or any considerable portion of those who talk of leaving this place carry their designs into effect, a few months from now will find the population to consist only of county officials. Everybody is going somewhere this spring to make a fortune, and there is no use of talking or trying to reason the case with them—they all know that it only requires an effort to "make a pile," and are all determined to make a rush for some "sage brush region" as soon as spring comes.—*Oroville Record.*

It is so all over the country, and next fall we shall see them coming back poor as rats.—*Marysville Appeal.*

The miners of this State still need a little more tuition in the schools of humbuggery, so we will have to let them slide. Adventurers, like water, naturally find their "level."

MINING GOSSIP.

EDITED BY FRANK WARDDELL.

[In this department of the MINING AND SCIENTIFIC PRESS we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and de-merits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free discussion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

BOUND FOR BOISE.—Thousands, so it is said, are bound for this new mining region, and if we were to credit one half the astonishing and wonderful reports concerning this location, it is richer than any other spot ever yet discovered, and, as for Gould and Curry claims, why they are discovered every day in the week and in one word the only trouble you have to go through with before you become rich, is the disagreeable trip to the place. Now this talk may set some people excited and crazy, upon the subject of becoming wealthy in a day, and thus they are leaving good situations, disposing of their property and doing many other foolish things; but, gentleman, take our advice; don't rush wildly off; think matters over quietly; consider what you are risking for an uncertainty; the hardships you will have to undergo—and then take into serious consideration how many of your friends have heretofore returned home wealthy after going off in one of those wild stampedes.

ROMANCE OF THE WIDE WEST CONTINUED.—During the past week W. R. Garrison has commenced a suit against John W. Tucker, in the Fourth District Court, for the recovery of $48,600, being the amount paid for one hundred and twenty shares of the Wide West stock. Mr. Tucker was arrested upon four charges, in all—that of Messrs. W. R. Garrison and C. F. Smith, H. P. Wakelee, Donahue, Ralston & Co., and A. Gamble. These gentlemen allege that they have been swindled in consequence of different telegraphic dispatches having been sent to them from the mine, purporting to come from intimate friends of theirs, the true character of which they did not find out until after having acted upon them, and losing heavily thereby, that the dispatches were sent through the instructions of John W. Tucker, from parties of similar names, working in the mines, with the idea of deluding and taking advantage of them. The charges preferred against him are very serious, and place Mr. Tucker, we should think, in a very uncomfortable predicament. Time will be the only means of telling how this unpleasant matter will terminate.

ANOTHER PIONEER GONE.—It is with feelings of deep regret that we announce the demise of the well known old San Franciscan, Mr. Joseph R. Rassette, who, according to a dispatch received in this city, was instantly killed by falling in the shaft of the Chollar mine. The deceased was a very enterprising man and much respected. It will be remembered he was the owner of the once famous Rassette House. At that period he was considered one of our wealthiest citizens, but since then, like many others, he has experienced severe hardships and from what we learn died poor.

GREENBACKS.—If our readers at any time desire to purchase or sell Legal Tenders, they will do well by giving our jovial friends, Messrs. Rennie & Morrison, corner Washington and Montgomery streets, a call.

NORTH AMERICAN.—We are not prepared to give public what we know concerning the mysterious fall this stock experienced on Monday morning.

BURNING MOSCOW has improved in prices; nothing to warrant the rise, however.

NEW STOCK EXCHANGE.—We understand that the room in the Montgomery Block building, corner of Montgomery and Merchant streets, will soon be transferred into a Stock Exchange.—*Morning Call, March 3d.*

We are under the impression that there are already quite a sufficient number of stock boards and brokers in this city, without any further incorporations. The very fact of the disorganization of the S. F. Board of Brokers, within the past week, and the small amount of business done in the New Open Board, should be evidence enough that another board could not exist.

AMUSING.—We were quite amused, the other day, while partaking of dinner at one of our principal hotels, in listening to two very pretty young misses, who were seated directly opposite to us, among other subjects conversing upon that of the respective merits and demerits of the different mining claims, but more particularly the Potosi and Chollar mines. One of the ladies, we afterwards learned, was the lucky possessor of many shares in Potosi, and the other was interested in the unfortunate Chollar stock. Taking into consideration the fact that the two companies are now testing their rights in a siege of litigation, our reader can well imagine that the arguments, *pro* and *con*, were of a lively nature. We left the table silently, thinking to ourselves what a treat it was to hear ladies occasionally taking an interest in and discussing business topics.

S. F. BOARD OF BROKERS.—This once prosperous board of brokers have, we are sorry to say, (speaking in the miners' modern parlance) "gone up the flume;" or in plain words they have disorganized and now offer to the public their effects to the highest bidder for cash. It is rumored however that a new body of brokers intend re-organizing it. If such are their ideas, we would recommend to their serious consideration the importance of adhering more closely to parliamentary rules than the old board did.

BEAUTIFUL SPECIMENS.—The specimens collected from the various leading mines upon this coast to be exhibited at the great Metropolitan Fair in New York, were forwarded by Mr. Leland, proprietor of the Occidental hotel, on the steamer Golden City, March 3d. We never remember seeing a finer collection of specimens, and doubt not but they will attract much attention among the Gothamites.

NEVER TRADE ON SUNDAYS.—Parties who do not believe that it is unlucky to trade on Sundays, can gain a little information on that subject by consulting a number of victimized brokers who bought North American stock at $140 to $155 on last Sunday morning, from some of the sharper operators who are always on the "wing" for "points," at all hours of the night and day.

OFF FOR OWEN'S RIVER.—Such is now the cry, and the rush for this prosperous and healthy mining locality has commenced in real good earnest. Hundreds of old and new prospectors have taken their departure during the past week, and the accounts continue very encouraging indeed. Success attend them, say we.

ELECTION.—Mr. G. W. Gibb has been elected President of the Tallulah and Great Basin Mining Companies, in place of Mr. G. W. Johnson, who resigned the position on account of his contemplated departure for Europe. Mr. Thomas Hill has received the appointment of Secretary.

EAST LYNNE G. & S. M. Co.—This stock continues to be quite a favorite upon the market, and large quantities have changed hands lately, at prices ranging from $15 to $20 per share.

NEW SUPERINTENDENT.—Mr. R. H. Evans, formerly Superintendent of the Wide West mine, has been appointed to superintend the Real del Monte. We hope that better success will attend him in his new position than he experienced in his previous one.

REAL DEL MONTE MEETING.—We were in hopes of being able to lay before our readers, in the present issue, a full report of the investigating committee, which was appointed by the stockholders at their informal meeting to thoroughly investigate the affairs of this company. The meeting was advertised to take place on the evening of the 4th inst, but owing, as Secretary Willard says "to the unusual demand for transfers, it has been found impossible to prepare the stock list in time for the meeting," and it was therefore postponed until Saturday evening, March 5th, (for further particulars we refer to their card in another column,) which, unfortunately, makes it just one day too late for us to give the details to our numerous readers. However, it is a consolation to know we will have further time to look into matters and things, thus more carefully examining the said report. We will then use our best endeavors to ascertain "where the screw is loose," granting the committee have not succeeded in so doing. If we do, our readers can rest assured that we shall not tamely submit to underhand games, but come boldly out, as we have heretofore done, and make our suggestions. The daily press will no doubt publish the report; if so, we advise those interested, especially if the report is not so "high colored" as expected, and rather "luke warm" in its bearing, not to recklessly dispose of their stock at once but calmly to think the matter over in their mind for a few days, at all events.

ANOTHER DIVIDEND.—The Jefferson company yesterday, declared another dividend of $20 to the foot. This dividend pays two of our citizens very fair sums—one $4,400, and another, $3,200. The receipts for the crushing during the month of February were $30,599.—*Marysville Appeal*, March 1st.

NEW PETROLEUM COMPANY.—A company to be known as the Point Arenas Petroleum company was organized, in this city, the past week, with a capital stock of $700,000, divided into 7,000 shares of $100 each. The officers elected are as follows:—R. J. Tobin, President; D. S. Cutter, Secretary; S. B. Campbell, David Beebe, T. S. Bennett, R. J. Tobin and A. R. Briggs, Trustees. There are over 1,000 acres in the company's claim, which is situated on the west side of the Coast Range, and directly opposite the Coal Creek coal location, elsewhere noticed. This petroleum deposit is quite similar to that at Santa Cruz, occurring as a mass of saturated sand, but is richer in petroleum.

TECUMSEH MINING COMPANY, COPPEROPOLIS.—The accounts from this copper mine are very encouraging. Their principal shaft is now sunk to a depth of one hundred and fifty feet; the indications are good, and they daily expect to strike the lead. The mine is beginning to attract much attention, and the ore already taken out is of a superior quality. The stock of the company is mostly held by a few persons, and none can be sold outside without first giving them the privilege of purchasing.

BUCKEYE.—This stock has commenced, at last, to move, and is gradually going up in the market. The company, we learn, have made some fine and important improvements, and have now set to work "with a will," and a firm determination of thoroughly developing this mine. (About time, we should say.) They are now out of debt (an important item—also a great blessing), with prospects flattering.

THE MINING AND SCIENTIFIC PRESS.—This excellent journal comes to us greatly enlarged both in size and extended information. It is the most useful, instructive and necessary paper published in San Francisco for the benefit of miners and scientific men. It should be patronized by every man who has an interest in our mines; for there is no paper in San Francisco that takes such an interest in making favorable mention of the mines in this section and so willing to do them justice as this. It is published by Messrs. Dewey & Co., who are men of ability and understand thoroughly the subjects which they write about. It is a paper of more advantage to the Pacific coast, than is the *Scientific American* to the Atlantic States. It gives full and regular statements of the metal market—of Iron, Copper, Steel, Zinc, Lead and Tin—new incorporations and the price of stocks as they are held in the Stock Broker's Market, together with the daily transactions of the different Boards. Besides this it publishes all the new improvements being made in machinery and the methods of reducing, and treatment of ores. In fact it is the greatest necessity of this coast for Miners and Scientific men, for in it they may learn nearly everything they may want to know. It is ever a welcome visitor to our table, and we trust to receive it as regular in the future as we have in the past.—*Esmeralda Star.*

DECIDEDLY ARBITRARY.

The Bill of Mr. Shafter, for a crooked, rigid and narrow law for the publication of assessments and sales of mining stocks, has been amended by striking out *one* of its various foolish and abominable features, viz, the provision for the redemption, within ninety days, of the stock sold, in which condition the bill has passed to engrossment in the Senate. Possibly the means and influence of sharpers and selfish and "gobbling" publishers may carry the bill through; but in the honest intelligence of our legislators, and the exceedingly arbitrary provisions of the bill, we in fancy discern the spontaneous seeds of its certain death.

By this act no assessments of over 5 per cent. of the capital stock can be levied at any one time, and a second assessment cannot be made until all the requisitions of the law have been gone through with exactness to collect the former to the last cent. This is at least a piece of presumptuous guardianship over the assumed ignorance and incapacity of stockholders, who make their own by-laws and the trustees chosen to execute the same. In most instances, 5 per cent. assessments are all sufficient, but in others they are not. The capital stock of many companies in the State has been fixed, by the unassuming holders, at a modest figure, nearer the comparative value of their mine than "wild cats" are apt to place theirs, and it is as injurious as it is unjust to disregard their common sense rights and interests, as this bill certainly does. A large number of companies, whose stockholders' means are limited, are in the habit of making monthly assesments of twenty-five cents per share, but the restrictions of Mr. Shafter precludes this, and if an initial letter of the name of one of the shareholders should be published wrong, the works of the company must stop until the full process of the law has again been through with, and the publisher furnished an extra advertisement or two.

The order levying an assessment must specify the time of advertising the sale of delinquent stock, which shall not be less than thirty nor more than thirty-five days. Will Mr. Shafter, or any other advocate of this "important bill," inform us of any *good* reason why the time of advertising should be limited to between just *thirty and thirty-five* days? What harm would accrue if the trustees should be allowed to give stockholders in San Francisco, Washoe, or New York, thirty-six days' notice, in some instances at least, before obliging them to pay their assessments or be taxed for a notice of sale?

Again, the sale can take place within *ten* days of the time fixed for its first advertisement, but it shall not be made *after* a notice of over *twenty* days. If ten days notice suits Mr. Shafter's arbitrary feelings, why outbar the more liberal notions of equally honest men, in the management of their own affairs, and the privilege of giving twenty-five or a hundred days' notice if they see fit? What harm would come of it.

If the publication is in a daily paper it may be either ten or twenty days; but if in any other, it must be just two weeks—no more or less. Being a little interested in the matter ourselves, and having a few friends among the mining fraternity of the State, we respectfully ask Mr. Shafter to explain to us all (when his bill again comes up) why he did not bestow this, the most liberal feature of the bill, upon those whose wisdom and economy leads them to patronize weekly publications—allowing them also to extend the period of insertion.

The closing section of the bill is in keeping with the illiberality of the balance, and requires that it should take effect immediately after its passage, without allowing time for its imperative provisions to be properly circulated and understood.

We know of but one essential amendment necessary to our present laws for selling delinquent stock, namely, a simple provision requiring secretaries in their notices to state the location of the claims of the company. The present laws have been tried, are well known, and with the above exception are pronounced "very good" by a larger class of honest and intelligent men than will ever be found to sup- Mr. Shafter's "Bill for the Arbitrary Distinction of the Acts and Literature of Mining Associations."

WASHOE STOCK MARKET.

Collated from the Regular Reports of the Virginia Daily Union to Latest Dates.

Stocks during the week covered by our report have not been as active as for the two weeks previous. Sales are still chiefly confined to American Flat. Dealers are more cautious in making investments, and many are waiting for further developments. Our list of "asked" and "bid" contains the latest figure of each company reported, and is confined exclusively to transactions within the week.

LATEST ASKED AND BID.

Gold Hill District.—Arizona, $14 bid, $20 asked. Argo, 6b, 18a. Astor, 17b, 20a. Branch Mint, 19h, 30a. Bullion, 78b, 90a. Baltic, 170h, 190a. Baltimore American, 45b, 50a. Bell Vernon, 3b, 9a. Challenge, 7a. Claremont, 7a. Combined Effort, 12b. Consolidated Company, 29h, 35a. Caledonia Tunnel, 20b, 28a. Crœsus, 50b, 60a. Crœsus Original, 2b, 15a. Crown Point Ravine, 20a. Empress, 5b, 15a. Ten feet Lady Bryan No. 2 sold at 4.50. 25 ft Arizoua at 9. 10 ft Branch Mint at 20; 5 ft Knickerbocker at 32.50; 10 ft ditto at 35; 10 ft ditto at 37; 10 ft dittto at 37.50. 10 ft Napoleon at 6; 10 ditto at 6.50; 10 ft ditto at 7. 10 feet Rock Island at 20 (buyer 30 days.) 5 ft Randolph at 30; 5 ft ditto at 35.50. 5 ft Honduras at 9. 5 ft Shamrock at 3. 10 ft White Dove Consolidated at 3. 25 ft Frnukel at 26.50. 20 ft Mantonomah at 9. 15 ft Dardanelle at 3. 10 ft Northern Light at 5. 3 ft Lady Bryan No. 2 at 4. 25 ft Silver Vale at 5. 10 ft Gentry at 2.75; 5 ft ditto at 2.75. 50 ft Grenada at 1. 20 Northern Light at 6. 10 shares Rock Island at 18. 15 shares Kentucky at 4.50. 25 shares Gentry at 2.25.

Reese River.—The followiug items are from the *Reveille:*

We were lately shown a letter received by gentlemau in Clifton, from the secretary of a mining company whose claims are located here, but who resides at Folsom, Cal. He, with others of the company, object to the working of their claim in which they were gratuitously located by the prospectors, now residing here, and anxious to go on with the development of the mine. This seems to be a case of generosity misbestowed. Men at a distance selfishly accept of "feet" in ledges for the sole purpose of putting the stock in the market, and never a thought or an effort to make it productive. If such do not wish to work, or assist with means the miner in the development of his discovery, it would be more manly and honorable to return the stock to the original locators, and not be the dead weight that would starve one, and retard the general prosperity of the country.

Several gentlemen of this place (Austin) have been granted a franchise to build a toll road from here to the Colorado river. They will send out a party on the first of next month, and they expect to commence operations as soon thereafter as possible. As this road will pass through Summit, Bunker Hill, Smoky Valley, Washington and San Antonio districts, it will do much towards developing the resources of those rich sections and thereby benefit the whole country.

Three tons of ore from the Gen. Sigel ledge were lately crushed at Hildreth's mill, with not extravagant but favorable result, yielding 318.25 ounces, valued at $399.94. It was melted and assayed at the office of Veatch & Co. This yield is at the rate of $133 per ton.

California Raisins.—The *Scientific American* says that California raisins are a great novelty at the East. They are said to be equal to the best imported, and can be sold at a lower figure. Very few have appeared in the Atlantic States, but in the course of time they will drive the foreign fruit from the market.

Mechanical Department.

OUR MECHANICAL INTERESTS.

Never has a greater activity in building been witnessed in San Francisco than at the present moment. Dwelling houses and stores are going up in every part of the city, and still the demand for "more" is constantly felt. Many of the structures in progress are of a very superior order, and for durability, size and architectural beauty, will compare favorably with any city in the Union. Our foundries, though constantly increasing their area and general facilities for work, still find it almost impossible to answer the orders that are constantly crowding in upon them. A larger amount of substantial sewerage and other street improvements, is now in progress than has been witnessed at any former period. According to present appearances, our streets will soon be placed in excellent condition, always excepting the slovenly manner in which the street *cleaning* department is managed. Brick sewers, good pavements and clean streets are important adjuncts to the general prosperity of a city, and indispensable requisites to its health and comfort. In street railroad facilities, we believe there is no city in the Union better supplied than our own. Every branch of mechanical industry in our midst is prosperous beyond all former precedent. Go where we may, the busy hum of industry meets us on every hand, and the very air is resonant with the evidences of our prosperity. There is scarce a branch in all the various departments of industry that is not represented in this city.

It seems but right, in this connection, that we should take a brief retrospect of the past. It is but a few years since our market was constantly glutted with the refuse fabrications of eastern mechanics and manufacturers, in return for which our hard earned gold was shipped in such quantities that but little was left, in the way of capital, with which to build up home manufactures to avert the evil. The few who were then struggling, almost against hope, in this apparently vain effort, met with but poor encouragement, even from those equally interested with themselves in their success.

Our pioneer mechanics and manufacturers, in the meantime, however, kept up a stout heart. That noble institution in our midst, the Mechanics' Institute, proved itself a most useful and important instrument in bringing about the change which was so soon witnessed in this particular. It is to this institution that we are mainly indebted for that combination of effort which has resulted in freeing California from the thraldom of distant dependence. The yoke of eastern monopolists no longer galls our necks. Instead of sending to the Atlantic States for nearly everything which we need in the mechanical line, and drawing on our mineral resources for the necessity, we are now not only meeting our own demands, but actually supplying immense quantities of machinery for our Mexican neighbors and for the far interior of the continent, hundreds of miles beyond the eastern boundary of our State. The gold which once flowed East for this supply now circulates among our own mechanics, and serves to sustain and build up an interest which promises, ere long, to become one of the most important, as it is even now the proudest, of our growing State. It is to this new turn in the tide of our domestic industry, that we are to attribute the wonderful improvements which we briefly passed in review at the outset of this article, and which we now witness in our city's progress. The mechanics of San Francisco may justly look with pride upon what they have accomplished within the past four or five years. They have, in that time, made a record unequaled in the history of any other city in the world. Our people have not only accomplished all this in mechanical advance, but we have even reversed the history of the past with our commerce—we have been shipping "coals to Newcastle" in supplying South America, our early granary, with cereals of our own raising. The products of our soil have even found their way "around the Horn" and across the ocean to seek a market in English ports. Our unequaled energy has, in short, created for itself a repute which is world wide, and as permanent as our very mountains; while our honest industry grows healthier day by day, and more independent. Our field of labor is ample, and with a demand which knows no limit, and talent and enterprise unequaled, we see no obstacle to the early approach of our city to a position which destiny seems to foreshadow, as the leading commercial and mechanical metropolis of the globe.

Expansion of Wrought Iron.—Wrought iron, in being heated from 32 to 250 degrees. expands at the rate of one inch in every 450 of its length. A steam boiler 16 feet long, in the process of getting up steam, expands seven-sixteenths of an inch. This fact has been verified by careful measurement. Railroad tracks, tubular iron bridges, and all similar structures are constructed with open joints, to meet the alternate contraction and expansion which is constantly going on in consequence of the daily variation in the temperature of the atmosphere. It is stated on the authority of Mr. Stephenson, the eminent engineer, that a track of three or four miles of road was once laid near Peterborough, in England, without a proper regard to this simple fact, and the consequence was that on the first warm day the sun caused such an expansion of the iron that the rails and sleepers were raised in one place to a height of three feet in the air, arching over an extent of fully fifty feet of ground.

American and Foreign Patents—The opinion is generally prevalent, we believe, that a larger number of patents are annually issued from the American Patent Office than from any similar foreign office. Such, however, is not the fact, as will be seen by the following comparative statement of the number of patents issued for the ten years prior to 1856, from the Patent offices of the United States, England and France, respectively:

England,	United States,	France,
5,244.	10,695.	22,917.

It will be seen, on comparison, that the patents taken out in the United States exceeded those issued in England by a little over twice the number; while those issued in France exceeded the issues in the United States in almost precisely the same ratio.

Locomotives.—At the breaking out of the present war, the Baltimore and Ohio Railroad owned 235 locomotives, all in running order—the greatest number owned by any single road in the world. The Illinois Central Railroad, at the same date, was furnished with 17 miles of cars, and the road was even then, and still is, entirely inadequate to accommodate all the business that seeks to pass over it. The number of locomotives in Great Britain in 1863 was 6,398. The ordinary wear or life of a locomotive is about 20 years.

An Improved Saw Mill Carriage, has been patented by Mr. Dennis Lance, of Springfield, Vt., which relates first, to a clog so constructed and connected with a lever or handle, that by a very simple adjustment the log may be set to the saw, and the log supports gigged back, when necessary, to receive a fresh log to be sawed. A convenient arrangement is also attached by which the log may be sawed in taper form, when required.

Packing for Journal Boxes.—Jonathan Cork, of Red Banks, N. J., has obtained a patent for an invention whereby he employs grass wrack, sea-eel grass, or other sea grass, dried, cured and saturated with a suitable lubricating substance, as a substitute for cotton waste and other fibrous material, generally used as a packing for the journal boxes of railroad car axles, the shafting of machinery, etc.

The Harmon Gold and Silver Mining Company, of El Dorado county, have declared a second dividend; three dollars a share being the amount coming to the stockholders this time.

A Most Unwise Recommendation.—We observe in our Carson correspondent's letter of yesterday that his Excellency, Governor Nye, has sent a special message to each branch of the Territorial Legislature, recommending these bodies to subscribe for from $500 to $1,000 dollars' worth of a certain book to be published by one Silversmith. As we happen to know something about the book on the "Metallurgical and Mineral Wealth of the Pacific Coast," and of Mr. Silversmith, who professes to be competent to compile such a work so as to make it "interesting to the people of this Territory," and knowing that the Governor's recommendation, should it be adopted, will entail several thousand dollars of expense on the people of the Territory, we feel it incumbent on us to expose the humbug. Mr. Silversmith will never publish such a book; he is altogether incompetent to accomplish such an object; destitute of even a rudimentary knowledge of the sciences he in his prospectus refers to; without either talent or means—save impudence; how will he be able to accomplish a work that requires talents of the highest order and large means to render "interesting to the people of this Territory?" Mr. Silversmith was at one time the reputed editor of the *Scientific Press*, published at San Francisco. Any person desirous of being informed on that gentleman's accomplishments will be posted by inquiring at the office of that paper. We very much regret to say that we fear Governor Nye has permitted himself to be imposed upon. If he wishes to retain his reputation for common sense, we trust he will immediately recind his recommendation to encourage the vilest of humbugs. —*Virginia Bulletin, N. T.*

We are without the least authority for *contradicting* the above. Neither of the present proprietors of the *Press* have ever been associated with the above named individual, and our friends will do us a great favor by refraining from associating his name in connection with our journal.

Coal Creek Coal Mining Company.—This coal mine is located about six miles east of Cloverdale, Sonoma county, Cal., and three miles north of Russian river, on what is known as Coal creek, a tributary of Sulphur creek. The location covers 320 acres. This coal was first discovered by Peter T. Archambou about two years ago, and a company was organized and incorporated for working it, on the 7th of November, 1863, with a capital stock of $120,000, divided into 600 shares of $200 each, with R. B. Marklee, A. P. McCarty and D. S. Cutter as Trustees. The coal, which is a cannel of a very superior quality, has been discovered in eighty different places on the ground, located in beds of from one to five feet in thickness. Subsequent to this location, a party known as "Alley & Co." went upon this mine, and did considerable work. Suit was brought against them in the District Court of Santa Rosa, and on the 19th instant the jumpers were dispossessed by order of the Court, and the Coal Creek Co. again placed in possession. This company is now actively engaged in opening their mine. We are informed that many coal miners of much experience have visited this mine, and pronounce it one of the most promising in the State. Specimens of the coal have been left at this office. This mine is located within three miles of a projected railroad communication with San Francisco Bay.

The Stock of Lumber in this city is being rapidly decreased, owing, in part, to the low water in the streams, and in part to the stoppage of the supply usually derived from the Mendocino mills, recently destroyed by fire. Prices are advancing in face of an unusually active local demand, which promises to consume all our old stocks before the new Mendocino mills can be rebuilt and placed in good running order. Two very fine engines, each 20-inch cylinders, with 4-foot stroke, are now in progress of construction at the Miner's Foundry, in this city, and designed for the mills above alluded to as having been destroyed by fire.

Argentiferous Sulphide of Copper.—A sample of argentiferous sulphide of copper, taken from the tunnel in the Great Central mine, in Weaver District, Arizona, at a distance of fifty feet from the mouth of the tunnel, carefully assayed by Messrs. Wm. P. & Theodore A. Blake, of this city, yielded as follows: Copper, 63.18 per cent.; silver, $186, and of gold a few dollars per ton of 2,000 pounds.

Patent Department.

Steam Condenser.—Mr. Thos. McCauly, of this city, has made application through the Mining and Scientific Press Patent Agency, for letters patent for a steam condenser, in which the condensing agent employed is air instead of water. This invention is designed for application for stationary engines, in localities where there is a scant supply of water, and also for enabling engines to keep up a continuous feed from a single supply, to be increased only by the percentage of leakage which may arise from working. By the employment of this condenser, an engine may keep up a continual supply of pure water, which obviates all possible danger from deposit of mud, or scale. From it, an engine may derive all the material benefit obtainable from a low pressure engine, and will furthermore avoid all possible danger from low water in the boiler.

Our Washoe friends will also find in its use an entire immunity from "scale" in their boilers, which is now a most important difficulty to be overcome by engineers in that region.

The condenser requires no power whatever, for its operation, while the condensers in ordinary use, in marine engines, lose nearly one-fifth of their power from the necessity of their employment The invention of Mr. McCauly is inapplicable to marine engines from the fact that it requires more room than could be ordinarily allowed for such an apparatus on ship board. The inventor will take immediate steps to bring the principles of this invention to the notice of engineers in Washoe.

A New Amaloamator and Separator.—Mr. W. D. Farrard, of this city, has recently produced something of a novelty in the way of an amalgamator, which has been at work during the past week, on Market street, nearly opposite the head of Sansome. This machine differs entirely from any other in use, its operation being more like that of a common clothes washing machine than anything else we have met with. The body of the machine is trough shaped and may be of wood or iron, with dies to fit upon its inner surface. The mullers are attached to a rocking shaft and are moved backwards and forwards. instead of in a circular direction. The dies are parallelogram in shape, with groves or recesses for the quicksilver, in which it is gently agitated with stirrers. We have seen the machine in operation, and it appears to work well. Very important results are claimed for it. It possesses the advantage of compactness and simplicity inferior to no amalgamator in use, and is well worth the attention of miners. Applications for letters patent have been made through the Mining ann Scientific Press Patent Aoency.

Clothes Washing Machine—*A California Invention.*—W. M. Blood, San Francisco, Cal. This invention consists in the employment of a stationary concave of rollers, fitted with a proper suds-box, and used in connection with an oscillating, yielding or elastic rubber, the same being attached to a rock-shaft, the bearings of which are fitted on springs, and the rock-shaft, with a treadle attachment, all so arranged as to enable clothes to be washed in an expeditious and perfect manner, and without injuring the same by excessive or undue friction. A patent has been received for the above.

A New Journal Box.—G. C. Hunt, of Bridgeport, Mass., has secured a patent for a new method of constructing journal boxes. This invention consists in the employment of a box with hollow sinks and bottom, whereby an oil fountain is produced, from whence the oil is taken up to the axle, by means of one or more wicks, the same being so acted upon by weights or springs so as to be always held in close contact with the axle; they thus carrying up the requisite supply of oil, without allowing any waste.

Labor is the parent of all the lasting wonders of the world, whether in verse or stone.

The Mining and Scientific Press Patent Agency,

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and Inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken ont for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief.....	20
On every appeal to the Judges of Circuit Court, D. C.....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed

We have had successful experience in conducting these appeals. and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. D. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Will be Discontinued.—After this date subscriptions not paid for in advance will be discontinued. As soon as possible bills will be presented for all arrearages. Parties who receive a paper from the office of delivery cannot evade the LAW requiring payment for the same. We shall in future keep no continued accounts with subscribers, and the subscriptions of ALL friends and patrons will be treated alike.

San Francisco:
Saturday Morning, March 5, 1864.

A MINING SCHOOL FOR SAN FRANCISCO.

In our last issue we promised a syllabus for a course of lectures such as might be appropriately adapted to a mining class, such as we would desire to see established in this city.

SYLLABUS.

I. Facts connected with the deposits of the useful minerals—such as would be valuable to the prospector — viz :—beds, strata or seams, stream works, lodes or mineral veins, flats, pipe veins, stock works, irregular masses, dislocation, and the rules for searching for the dislocated and best portion of a lead or deposit.

2. Preliminary research, shoading, trenching, costeaning.

3. Boring, as practical with different apparatus, with rods or rope, with various cutting and clearing implements.

4. Tools employed in mining, in hard and soft ground—blasting by various methods.

5. Principles of employment of mining labor.

6. Modes of gaining access to, and lighting subterranean cavities.

7. Levels and shafts, or the main openings to underground works ; driving and sinking.

8. Means of securing excavations, by timbering, masonry, tapping, and construction of dams.

9. Exploitation or the working away of veins and of strata.

10. Carriage, or transport of minerals through the underground roads.

11. Winding or raising in the shafts with the machinery and apparatus required.

12 Pumps and pumping machines.

13. Ventilation, its principles and practice ; natural ventilation, artificial introduction of moving power, distribution of air through workings.

14. Dressing of ores.

From the above syllabus it will be apparent that miners will be able to derive much practical information from the proposed lectures, upon points with regard to which the greater portion of our mining superintendents, we apprehend, are as yet but little informed. How very often do we hear stockholders complaining of the inability of their superintendents. Suppose a Board of Examiners should be formed, before whom all candidates seeking the positions of mining superintendents, might present themselves for examination ; and when found capable, be entitled to a certificate to that effect. Would not many directors be very likely to look for their superintendents and engineers from among those holding such certificates? and would not the consequence be a more skillful working of our mines, and more satisfactory reports with regard to their condition? Most certainly so. Skillful mining operations, except in rare instances, can never be hoped for in this country until our people or the government put their shoulders to the wheel and afford our miners facilities for acquiring that information so indispensable to a proper management of the hazardous and intricate calling in which they are engaged.

Most of our readers doubtless recollect the parallel drawn by the state geologist in his late address before the Mechanics Institute of this city, and published in this paper, with regard to the relative progress which has been made in legitimate mining in California and Australia. Who doubts the correctness of the assumption which was then made? Certainly no one who is conversant with the facts in both localities. Where else are we to look for the cause of difference. We have as rich and richer mines here than can be found in Australia. So long as mining in both countries was confined to the placers, we kept more than even pace with our distant rival ; but as soon as we came down to legitimate mining, where science and skill could be brought to bear, Australia immediately outdistanced , and is now ahead of us, although we have decidedly the advantage both in the average richness, extent and variety of our mines. The experience and knowledge of the English and German schools was early introduced into Australia and no man is placed in charge of a mine there who is not fully competent to fill his position. How is it with our mines ?

We wish to test this question, and will do so by putting the following query, which every capable mining superintendent should be able to answer, and would have to do so, to secure a position in any regular English mine. We state the question :—

"The workings on a copper lode, striking E. N. E., and dipping 80° N. N. W., are stopped by a cross vein, striking N. 15° E., and dipping 50° E. by S. In which direction and on what principle would you drive to find the other position of the lode?"

We should be pleased to receive answers to the above query from mining superintendents, since science can readily determine the question, before a blow is struck or a dollar expended. Of course we expect to find many who can give us a proper answer ; yet we apprehend but few, if any, can do so who have no other mining education than that which they have obtained at the mine, unaided by lectures and schools. We apprehend the most ready answer from a large majority of our miners, and one which may be found deeply graved in many of our mines, where they "have lost the lead," will be about as follows :—

"If the vein is lost, drift in one direction so many feet ; if you do not strike it there, drift the same number of feet in the other direction." "If you do not find it in the second drift, *levy another assessment*, and drift somewhere else !"

This is precisely the manner in which a large proportion of our mining operations have heretofore been carried on, and will continue to be conducted, until we raise a class of men educated to the business of mining. We can easily make a lawyer out of an unread shoemaker, or a first class machinist out of a farmer who has never seen a steam engine, than an officer, capable of taking charge of an important mining enterprise, out of either. Every man in life, who undertakes to direct the efforts of others, should first be educated for the position to which he aspires.

IRREPARABLE LOSS.—As we go to press the city is draped in mourning for the loss of one of the most distinguished and beloved of its citizens STARR KING IS DEAD ! A more unwelcome or melancholly announcement could scarcely be made. He will be followed to the grave to-morrow, by the great body of our citizens, who will present a concourse of as sincere mourners as ever attended one beloved and honored, to his final resting place.

A Formation of Black Oxide of Copper, with a Supposed Decomposition of Nitre.

We have been shown this week, in the laboratory of Mr. J. H. Churchill, of this city, some black oxide of copper, formed in the cold, by contact of that metal with nitre. Mr. Churchill thinks that a similar reaction must be met with in powder factories ; but it does not appear to have been observed. The contact of the materials had been maintained in a dry atmosphere, at a temperature varying from 55° to 65° F., for several weeks. The action of the air was probably effectually excluded. The nitre was mixed with sulphur ; and it will be curious to observe whether this is a case of the decomposition of a nitrate, forming almost the converse of the experiments of M. Millon and other French chemists, in which a nitrite is formed by "*simultaneous oxidation.*" Mr. Churchill proposes to repeat the experiment under conditions which will determine whether there is any formation of sulphuric acid. The oxide instantly colored ammonia a deep blue. The nitrate of potash employed was crushed from crystals and pure.

Since the above was in type the mixture after removal from the copper has been washed with distilled water and the filtered washings, tested with chloride of barium, yielded an immediate insoluble deposit of sulphate of baryta.

THE DROUGHT AND GOLD CROP.—Should the weather continue until past the period of the spring rains, more serious disaster will befall the State than is probably imagined. The loss of cattle and failure of the ordinary crops will not be the only damage which the State will sustain. There is another crop the probable loss of which is already beginning to be seriously considered. Unless we have a large quantity of additional rain, there is every probability that our hydraulic diggings will have to be entirely suspended during the coming summer. When it is considered that the yield of this class of mines reaches fully $25,000,000, per annum, the depreciation which their almost total failure would produce in our monthly shipments of treasure, may be approximately realized. We have no desire to be classed among the chronic croakers, but we hold it to be good policy to look the future squarely in the face, and shape our policy in accordance with what it may reasonably promise.

BREAKAGE OF THE DEL MONTE STEAM ENGINE.—On Friday afternoon of last week, while the Del Monte engine was doing its regular work at an average pressure of steam, the walking beam suddenly broke at the center, a portion of it still holding to the piston rod. As a consequence, the strain was instantly released from the cylinder, the motion of the piston rod suddenly increased, and the entire engine reduced to a complete wreck. The damage will be fully $10,000 and the delay cannot be less than two months. Various theories are asserted as the cause. It may have occurred from a variety of causes induced accidentally, through carelessness or by design. Foul play is more than hinted at. No one was present in the engine room at the time the accident occurred.

REESE RIVER BULLION. — Some idea of the amount of bullion now being taken out in Reese River, may be formed from the fact that 13,918 ounces of bullion passed through three assay offices, in that locality, during the month of January. Since that time the weekly yield of bullion in that region has largely increased, as will be noticed from the fact that 6,600 ounces were received at two of those offices only, during the first three days in February—a very encouraging increase.

THE CALIFORNIA TEACHER, for March, has also come to hand. This is a very valuable publication, and furnishes a most useful and important medium of communication between teachers and school officers, throughout the state. We trust it may become, as it should, a permanent institution.

MINING SHARE MARKET.

Stocks in the Mining Sharn Market still continue, ns a general thing, to decline, nnd transnctious nre confined chiefly to speculative shnres. A noticeable featnre of the present week will he the increase in the nnmber of dividend paying mines. The total amount of transactions for the week foot up at $1,268,389.65.

Ophir shares havn been in some request at nn improvement over last week. We notice sales of 147 shares at from $1,610@1,650 hnyer three days, closing at yesterday's board at $1,640. The receipts of bullion from this mine during the past month have been large.

Gould & Curry hns still further declined, with hut little business. Sellers were firm on Thursday nt $4,650@4,660. Bidders yesterday at 4,725, hut we hear of no transactions at that figure. A dividend of $125 per foot has been declared, paynhle to-dny.

Chollar has been somewhat moro in demand. It tonched $401 on Wednesday, but closed yesterday nt $375, with hut few sellers. It is reported thnt hetter ore has been struck in their third gallery.

Dauey has still further improved in business, nt fluctnating rates. Under the influence of favorahle reports from the mines it went up to $125 on Saturdny lnst, but opened on Monday at $175, reached $220 on Tuesday, from which figure it gradually declined to $180@190 at yesterdny's board. This company have made a shipment of $15,000 in bullion the past week.

North American has formed the chief feature of the week, upwards of 2,000 shares having changed hands since our lnst issne, at largely fluctuating rates. Closing on Saturdny nt ahout $145, it suddenly dropped to $85@90, at the opening of the hoard on Monday, hut suhsequently recovered to $120 and closed at $110, which continued nhout its average figure to the close of husiness, yesterday. The present affairs of this company appenr to he enveloped in much mystery. Various rumors are afloat, with regard to pending negotintions and uncertainties of title. In the absence of anything reliahle we would recommend operators to "go slow."

Lady Bryan. Business in these shares har largely increased the past week, with a quiet market. We notice sales of 2.308 shares nt from $40@50, with a marked improvement toward the close of the week. The work of development is steadily progressing at this mine.

Burning Moscow has materially improved, with an increased demand. Opening on Monday at $90, it rapidly ndvnnced to 112½ Wednesday, and closed yesterday at $108, hnyer 30 days.

Nevada, Justice Ground, still cintinues to attract considerable attention, and has met with another important advance fully equal to that noted last week. Opening on Monday at $175 @ 185 it gradually advanced, improving each day and closed yesterday firm at $225.

Lafayette has been more in demand, remaining firm at ahout last week's figures from $19 @ 22. We note sales of 415 shares.

Uncle Sam has still further advanced, and found hnyers on Wednesday at $825, an advance of $75 over last week. Having been much troubled of late at the mine, with water, the superintendent is now putting in a 10-inch pump; 450 feet of suitahle pipe are now at the mine.

Independent, G. H., has heen inactive the past week. It was offered at $45 without finding buyers.

Overman opened on Saturday last at $430@450, from which figure it gradually decliued to $400 on Wednesday, since which it has heen innctive.

We quote Yellow Jackett at $950@975, seller 60; Potosi has found hnyers at $1,225; Baltic at $160@175; Bullion at $75.

Empire Mill and Mining Co., is held firmly nnd has no sellers. This company has deelared a dividend of $40 per foot, payahle on Monday.

Segregated Crown Point is nlso held firmly. We notice a single transaction of 12 shnres nt $900 pnr foot, buycr 12 days.

Bujazet hns fonnd huyers the past week nt $50. A three day's crnshing from this mine, last week, yicldcd about $400, in bullion. This was from nverage rock. Choice rock has goun up to a high figure.

Harmon, El Dorado county, has not sustained its figures of last week. It closed on Wednesday at $29@32. The directors have declared nnother dividend, payahle on the 12th.

Pride of the West has still further ndvnnced, from $85 to 95, nnd is held firmly at the lntter figure. Five dollars per share will he dishursed to stockholders to-day, nnd regular monthly dividends are promised herenfter. The yield of bullion for February has heen $22,000.

Buckeye has heen much in request, nt nn important advnnce. It has gone up since our last quotations from $16½ to 25, nt which figure it is firmly held. This mine is out of debt and presents much encouragement to the adventurers.

North Potosi has heen in active demand, manifestiug a decided improvement towards the close of yesterday's husiness; 28 shares changed hauds yesterday afternoon at $70.

We quote Sierra Nevada at $85; Charles Cany, nt $15; Burnside nt about $15; Gov. Nye, nt $6½; Knickerbocker $39@40; Desert, $10; Blue Ledge, $16½; Adriatic, $9; Crockett, con. $9; Mt. Davidsou, $2; Sacramento & Meredith, $50; Baltimore American, $41; Michignn, $25; Imperial, $162½; Crocket $18; Garibaldi, $10; Victor Hugo, $20; Grey Eagle $27½; Central America, $5; Meloncs, $42; Eureka, $29; Caledonia Tunnel, $24; Belmont, $11½; San Carlos, $13; Santa Rosa, $8; Kohler Bros, $9¼; Hawkeye, $24.

Real del Monte, still continues an important feature in the market; 1778 shares having changed hands at from $35@47½, buyer 30 days, closing nt the latter figure at lnst evening's board, with a decided upward tendency.

We quote other Esmeralda stocks as follows: Antelope, $205; Corhet, $12; Wide West, $22; Coso, $5½.

We quote Humboldt stocks:—Sheba firm at $115; De Soto, $33; Ben Franklin, $6½; Ethan Allen, $3;

Reese River:—Ruby, $17½; Eclipse $20; Dacotah, $3; Grey Eagle, $22½.

Owens River:—East Lynn, $19; Golden City, $10.

Lady Franklin.—We have received some very fine specimens of ore from the Lndy Franklin Copper Co.'s vein, near the Zinc House, Nevada county. This company has recently heen incorporated. They are uow down 60 feet on their veiu, and still pushing downwards with an improving lode. There is every prospect of their developing a valuable mine. Success to their efforts.

The American Exchange and Review, a magazine miscellany of useful knowledge aud general literature, puhlished hy Whiting & Co., at 521, Chestnut street, Philadelphia. The January numher has just come to hand, and is well filled with iuteresting aud useful miscellany.

The Pacific Monthly for March, has been laid upon our tahle. This number opens with "California Pictures—around San Francisco," containiug illustrated descriptions of noted localities. It is a new and interesting featurc in this magazine. "Shimah" is nlso continued, as well the "California Wife." We understand that Miss Lester, the Editress, leaves this city on Monday, on a tour through Souora, San Andreas, Murphy's, Jackson, Ione City, and neighboring locnlities, where she will give "readings," nnd receive subscribers for the "Pacific Monthly."

Contents for February.

No. 6—Feb. 6.—Lecture on Mining and its Relations to Civilization and Progress—by Professor J. D. Whitney, delivered before the Mechanics' Institute; A Heavy Casting; Coal vs. Anthracite; Mining Gossip—Ophir Dividends, Liberality vs. Litigation, Sharp Transactions and other Items; Miners' Laboratory; Owensville Mines; Esmeralda Correspondence; Patent Department; Ho for the Mines! The Country Business of San Francisco; Mining Share Market; Washoe Stock Market—Sales, and prices bid and asked in Virginia and Gold Hill; Record of New Incorporations; To Prevent Dampness in Brick Buildings; Sales by the San Francisco Stock and Exchange Board, San Francisco Board of Brokers, and the Pacific Board of Brokers; Prices Bid and Asked; Chippings, and Miscellaneous Items.

No. 7—Feb. 13.—Ventilation of Mines—with Illustrations; Correspondence—Murphys, Calaveras county; The Great Desert and its Mines; Esmeralda Correspondence; California Coal, Iron and Copper; Mining Gossip—by Frank Wardell; Summary of Mining News—from various counties; An Extraordinary Winter; Mechanical Department—Saw Mill, Copper Coating, and other articles; Exposure of Fraud upon Science; Patents and New Inventions; State Polytechnic School; Late E. B. Goddard; Mining Share Market; Washoe Stock Market; The Antilla and her Cargo; Is there silver this side of the Mountains; Questions Answered; Chippings; Stock Sales; Incorporations, etc.

No. 8—Feb. 20.—Hints to Prospectors; Ventilation of Mines—continued with illustration; Correspondence—Calaveras Mines; Humboldt county, N. T.; From the Humboldt Mines; Santa Fe District, Reese River; From Austin, Reese River; More About Reese River; Mining Gossip; Real del Monte Meeting; Mining Paragraphs; The American Mechanic; Government Experiments in Using Hydro-Carbon Oils for Generating Steam; Patent Department: A Mining School Within Our Reach; A Significant Mining Advertising Bill; Signs of the Times; Gas Explosion in a California Mine; Stock Reports; etc.

No. 9—Feb. 27.—Ventilation of Mines—Editorial; A Gas Cooking Stove—illustrated; Traveling Correspondence—San Andreas, Calaveras county; A Trip to Surprise Valley; From the Humboldt Mines; Mechanical Department—A New Engine for the Gould & Curry Mill, A New Electro-Magnetic Engine; Insect Power; Professor Whitney's Address Before the Legislature; A Mining School for the Day; Summary of Mining News—From Yuba county, Sierra, Plumas, Tuolumne, Esmeralda, Humboldt, Reese River, Virginia; Mining Gossip—Real del Monte, Such is Life, After Them, Cannot Agree; Virginia City; Machinists' Tools; Ingenious Piece of Mechanism; Patent Department—Improvement in Generating Steam, A New Crushing Battery, Nail Machine, Improved Saddle; "Chippings;" Washoo Stock Boards; Mining Share Market; Washoe Stock Reports; Record of New Incorporations in San Francisco and Nevada Territory; Stock Sales in San Francisco, for the week, by the Stock and Exchange Board, the Pacific Board of Brokers, and the Stock Exchange; Report of Prices Bid and Asked; A Correct Idea; New Use for Alcoholic Drinks.

Copper Ore from San Diego.—We have received a box of copper ore from Louis Rose, San Diego, and taken from the "Enciuetos Copper Mine," near that place. These specimens were taken from a shaft only twelve feet deep. The gaugue rock is a soft micaceous slate, quite freely impregnated with copper sulphurets of a very rich character. It is very possible, nnd indeed probahle, that our correspondent may find the sulphurets better concentrated at a depth of, say 80 or 100 feet. The ore as it is, can be made vnluahle only hy running it through concentrating machinery. The nature of the ore is such as to reuder its concentration very easy. Thn mine will probahly prove a valuahle one when fairly opened. Our correspondent writes that several other veins have heen located in the neighhorhood. Tho country has heen hut very little explored. A gold placer was discovered a few months ago, where some 40 or 50 miners are now at work, nnd doing well. Machinery was expected soon to he put up on a quartz vein, which appears to he very rich.

Scale in Steam Boilers.—We have received a sample of "scale" tnken from a steam hoiler near Virginia City, with a request that we would nnalyze it, and suggest some remedy ns a prevcutive to its formation. But little benefit would he derived from its analyzation; while the cost would range from $25 to $100. With regard to its formntion, the only sure preventive is in the use of pure wnter, which may always be obtained by condensing the steam and using it over. A new condenser, designed to remedy the evil complained of, has recently heen invented in this city, and will be found noticed in our present issue under the "Patent Department" heading. Mr. G. Venard, of this city, also ndvertises in our columns a "Patent Steam Boiler Cleanser," which, it is claimed, operates as an "nntidote for scales and incrustation formed in boilers," which is highly spoken of, and which is extensively used in Europe, hy French and English engineers.

New Map.—Mr. Arthur W. Keddie has in process of prepnration a new map of California and Nevadn Territory, compiled from Government maps of the State and from the various county maps, which latter are prepared hy the severnl county surveyors nnd their assistants. The map will be on a scale of twelve miles to the inch. It will he published by Warren Holt, Montgomery street.

The Mining and Smelting Magazine for Jannary. This is an English publication devoted to mining, quarrying and metallurgy, with their associated arts and sciences. William Gibbs, puhlisher, London.

THE NORTHERN GOLD FIELDS.

Our Northern gold fields are rapidly assuming a position of great importance. These mines are located mainly upon the upper waters of Snake River, one of the branches of the Columbia, and mostly upon a branch of the Snake known as Boise River, equal in volume to the Yuba, and some 200 miles in length. Upon this river are located Fort Boise, Boise City, and Bannock City, each growing mining centers. The Malheur, which is also coming into considerable notice, is another affluent of the Snake emptying into that river nearly opposite the Boise. The Owyhee is also another important mining stream, emptying just south of the Boise and on the opposite side. Just to the east of the Owyhee, and running nearly parallel with it, is Jordan Creek, about the head waters of which is a comparatively new mining region just coming into notice. This creek is erroneously laid down on all the maps of this region, yet published. It is sometimes represented as emptying into the Owyhee and sometimes into the Snake river. Neither is correct. It *sinks* near the margin of a lake, which has not yet been represented on any map, but which has been named by its discoverer Lake Jordan, who was also the discover of Jordan Creek. These mines are spread over a region of country about 250 miles square, which last year sent to this city about $7,000,000 in gold dust. These mines have been worked under great disadvantages, and there is good reason to believe that their yield for the coming year will be nearly or quite doubled.

The mines are located about 250 miles north east of the Humboldt mines. They may be approached by trail from Yreka, or by the Honey Lake and Humboldt road, continuing from the latter by trail. A good wagon road will soon be opened to this region from California, direct, by way of Yreka. The Dalles *Mountaineer*, of Feb. 12, says that W. Lord, Esq., who had just arrived at Cañon City, reports that there is a great excitement there about silver mines, several rich leads having been struck in the immediate neighborhood of the town. Everybody was going in on "feet," and all were thoroughly persuaded that they had a second Washoe at their door. Cañon City is located on a small stream running westward, and about one hundred miles west of Fort Boise.

About 100 miles south of Cañon City is Pueblo Valley, on the western border of which, and covering an area of 15 or 20 square miles, great numbers of gold and silver bearing quartz leads have been discovered, which have already been prospected to an extent sufficient to give them a decided value. They crop out boldly and carry a heavy body of mineral. A few working tests have been made which compare favorably with anything heretofore found in the Territory. The character of these ores is very similar to those of Reese River. They are very easily worked, and selected lots have reached as high as $1,000 to the ton.

All of the mining region above described appears to abound with veins of quartz, as well as placers, which are being rapidly taken up and developed. The machinery for a first-class quartz mill, designed for the Owyhee country, is now on the way from San Francisco. This mill belongs to a company in which Mr. Jordan, the original discover of the Owyhee mines, is the principal stockholder.

According to the Dalles *Messenger*, Mr. William Spurr, a gentleman who has spent several months in prospecting the Malheur country, arrived at the Dalles recently, bringing with him numerous specimens of silver and copper ore, taken from newly discovered leads on the Malheur and John Day Rivers. Quartz rock taken from the Jackson lead, on the Malheur, has assayed at Cañon City, from $1,000 to $2,000 per ton. From the Brunswick lead, also on the Malheur, rock has been taken that proved fabulously rich in gold. From the Humboldt lead, on the John Day, Mr. S. has with him specimens of copper ore, which appear to be rich in that metal. Mr. Taylor, an old Washoe miner, who accompanied Mr. S. in his prospecting tour, pronounces the rock taken from the Jackson lead to be vastly richer than that taken from the famous Ophir, in the Washoe country. A company has already been formed for the purpose of working the Jackson lead, and Mr. S. will bring with him the necessary milling machinery to work the claim to advantage.

MOUNT DIABLO COPPER MINES.—Good results are being received from these mines. We have seen some very good ore taken from the Keokuk at a depth of seventy feet. As the work upon this vein progresses, it seems to be rapidly conecntratiug. We also learn that work upon the Mechanics, and other mines in the neighborhood, is being rapidly pushed, with encouraging results.

RETURN OF A COMET—A supplement to the January number of the *American Journal of Science* gives a letter from Mr. Watson, of the observatory at Ann Arbor, Michigan, in which that gentleman states that he discovered on the 9th of January, a comet which he believes to be a return of the celebrated comet of 1810, which so astonished Europe during the wars of Napoleon.

LATE accounts from Australia state that the Otago gold fields, are still yielding largely. Bushranging in New South Wales was unabated.

Secretaries of Mining Companies, Attention!

SAVE TIME AND LABOR!

Crocker's

STOCK & ASSESSMENT LEDGER

IS THE SIMPLEST, MOST ECONOMICAL AND USEFUL WORK EVER PUBLISHED.

Price, $10. Copyright Secured.

☞ Read the following testimonials to its excellence: ☜

We, the undersigned, hereby certify that we have used CROCKER'S STOCK AND ASSESSMENT LEDGER, and find it one of the most useful books ever published for the purpose designed. It is a great saving of labor, and by it Secretaries can keep the accounts of Mining Corporations in a neat and compact manner, and avoid many errors that inexperienced persons might make in stock and assessment accounts. We cheerfully recommend it to the Secretaries of Mining Corporations as a great improvement on the old system.

D. W. PARKHURST, Secretary of 11 Companies, Aurora.
J. R. McFARLAN, Secretary Pyramid Company, Sierra county.
J. G. LIBBEY, Secretary Companies, Virginia, N. T.
WM. BRAMER, Secretary of three Companies, Virginia, N. T.
C. G. WARNER, Secretary Lassell Company, Virginia, N. T.
JOSEPH PETTIGREW, Secretary six Companies, Aurora.
JAMES SWEENEY, Secretary Rough & Ready Co., Mich. Bluff.
F. A. HORNBLOWER, Secretary Mountain Quartz Company.
GEO. J. NEWMAN, Secretary four Companies, Monitor.
R. F. BARTON, Secretary two Companies, Virginia, N. T.
WM. E. HALE, Secretary eleven Companies, Gold Hill, N. T.
R. C. TERRY, Secretary three Companies Sacramento.
JULIUS JACOBS, Secretary two Companies, San Francisco.
C. M. BOALS, Secretary Bonesteel Company, Woodbridge.
HENRY HOBBER, Secretary two Companies, Woodbridge.
CHAS. GREIVES, Secretary Tule Co., Woodbridge.
DANIEL KELLY, Secretary Hutchens Co., Woodbridge.
E. C. LOTHROP, Secretary two companies, Marysville.
CHAS. M. GORHAM, Secretary Washington Company Marysville.
A. R. MESERVE, Secretary Garden Company, Viola.
AUG. WEIHE, Secretary nine Companies, Stockton.
ORLANDO JENNINGS, Secretary three Companies, Austin, N. T.
T. T. ARROWSMITH, Secretary Hank's Ravine Co., Folsom.
S. M. SEELY, Secretary three Companies, Folsom.
J. R. CLAYES, Sec. Hank's Ravine Company, (No. 2) Folsom.
ED. BURROWS, Secretary German Ridge Company, Murphys.
JAS. STOBIE, Secretary Murphys Company, Murphys.

It is the BOOK OF BOOKS for Mining Companies. In fact I pronounce it without equal.
H. W. ATWILL, Sec'y Wild Rose Co., Spenceville.

Having examined your "Stock and Assessment Ledger," I take pleasure in recommending it to all Secretaries of Mining Corporations.
J. HEACOCK, Sec'y Well Copper Co., Spenceville.

It is one of the most concise, appropriate and desirable books for Mining Corporations ever published.
GEO. G. BURNETT, Sec'y sixteen Co's, Gold Hill, N. T.

The Ledger can be adapted to Companies DECLARING DIVIDENDS, with a very slight change, and such will be got up for those who desire them. Copies of the work sent by mail, postage paid, on receipt of $10.

SEND FOR SPECIMEN SHEETS.

The Book is bound in Three Styles: Half Moroco, muslin sides, $10; Full bound, sheep, $14; Full bound, Russian bands, $17 50.

STOCK EXCHANGE.

The unparalleled development of the Mineral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a

PUBLIC EXCHANGE,

Conducted on the same fair business principles that characterize similar institutions in Europe and America, an urgent necessity in this city.

The public are therefore informed that a suitable building has been erected, at 612 and 614 Montgomery St., in which will be held Daily Sessions for the sale of Stocks, Bonds, Securities, Specie, etc., under the following Board of Directors, and subject to the following Rules and Regulations:

Board of Directors.

GEORGE W. DART, President.

WALTER SPARROW,	E. H. WILSON,
JOSEPH CLOUGH,	R. O. STURTEVANT,
HENRY WILLIAMS,	D. J. CULLAHAN,
E. PAVALLIER,	EDWARD FLANAGAN,
THOMAS WALLACE,	J. DE STA. MARINA,
M. G. ELMORE,	E. W. LINSLEY.

Rules and Regulations.

1. The business of the Exchange shall be managed by a Board of Thirteen Directors, to be elected annually, and to whom application for membership shall be made. Any question or issue raised touching contracts, made at the Board, their validity or meaning, shall be referred to a committee of five, for investigation and final decision.

2. The Sessions of the Board shall be from 12 to 1 P. M., and from 3 to 4 P. M., each day, Sundays excepted.

3. Only members of the Exchange shall offer Stocks, etc., for sale.

4. The public may bid upon and purchase any Stocks, Bonds, Securities, Specie, etc., that may be offered for sale.

5. Buyers of Stock who are not members must either make a deposit of Ten (10) per cent. of the purchase money at the time of sale, or have their contracts endorsed by a member.

6. Should any member or party refuse to fulfill a contract entered into by him at a Session of the Board, he shall thereafter be debarred from all privileges of the Exchange, at least until he shall have specially performed such contract.

Commissions on Sales

Of United States, State, County and City Bonds; Railroad, Steamboat, Telegraph, Gas, and Water Stocks; Certificates, Bills of Exchange, Treasury Notes, Specie, etc., one-half of one per cent.

Commission on Mining Shares:

Sale at $1 up to $10	$0 25 per foot
Sale at $10 up to $25	50 per foot
Sale at $25 up to $50	1 00 per foot
Sale at $50 up to $100	1 50 per foot
Sale at $100 up to $200	2 50 per foot
Sale at $200 up to $400	5 00 per foot
Sale at $400 up to $600	6 00 per foot
Sale at $600 up to $800	7 50 per foot

From $800 to $3,000 per foot, one per cent. Anything above $3,000 per foot, three-quarters of one per cent. 7v8-1f

Office, 511 Sacramento street, San Francisco. 3-1f

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Legal Tender Notes.

San Francisco, Friday March 4th.....64 per cent.

CREDIT IS WHAT WE ASK.—In our last issue we made some remarks respecting the sale of the "Mexican Mine" which were copied "verbatim" by the *Morning Call* and not the least particle of credit given to us for the same. We trust that our contemporary, in future will not forget to do the right thing by us when clipping from our columns.

THE AMERICAN JOURNAL OF SCIENCE AND ARTS, for January, has been received, and contains a varied and interesting table of contents. This is the only purely scientific journal published on the continent, and is one of which every American should be proud. Published every two months for $5 per year, at New Haven, Connecticut.

BULLION FROM WASHOE.—During the fourteen days ending February 29th, 14,560 lbs of Bullion valued at $421,808 were shipped from Virginia City, by Wells, Fargo, & Co.

AN Italian Professor says that hydroeyanic acid produces urea by its decomposition—at all events, some acid, which he had put away for four months, produced chrystals having all the characteristics of urea.

We have received No 1 of the enlarged MINING AND SCIETIFIC PRESS published by Dewey & Co., San Francisco. It is greatly improved, and gives promise of an excellent, able and reliable journal.—*Marysville Daily Appeal.*

Mr. A. T. Dewey, a Journalist of experience, has become associated with Messrs. Ewer and Smith in the proprietorship and conduct of this paper. It inaugurated the new year by doubling its size and other improvements, and is now a first class journal for miners and mechanics, as well as for the general reader.—*Sacramento Daily Bee*

This journal comes to us this week with a new head and enlarged to the full size of the *Scientific American* published in New York—sixteen pages. Those who take an interest in mining, industry and art should not fail to read the prospectus of the PRESS, which may be found in our advertising columns, and those who may destre to see copies, intending to subscribe, will have specimens sent free on application by letter to the office of publication.—*Mountain Messenger, La Porte.*

We have received the first number of the eighth volume of this interesting paper. It is now under the control of friend Dewey, and has been enlarged to sixteen pages. We commend it to miners, stock dealers, and others taking an interest in the development of the mineral lands of this State. It can be had for $5 a year, and if preserved will make two volumes of interesting matter, containing 416 pages each.—*Red Bluff Independent*

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

McDonald G. & S. M. Co.—Gold Hill district; Caleb Burbank, J. W. Titus, T. C. Smith.

King David M. Co.—Blue Sulphur Springs district; H. F. Bowley, H. Beckwith, Geo. W. Durain, A. C. Chapman, C. E. Cloyes.

Schuylkill M. Co.—Gold Hill district; J. C. Saunderling, O. C. McDonald, Robert Apple, D. Schroder, W. H. Bremer.

American Tar M. Co.—H. J. T. Scheel, Bernhard J. Scheel, E. O. Phelps.

Imperial Coal Co.—Sullivan district; C. L. Ross, W. Moser, F. Chappellet, H. Huguet, J. W. Wilson.

Keystone G. & S. M. Co., No. 2.—Gold Hill district; Wm. Justice, A. Fox, A. Thompson, E. M. Cesna.

Centreville Co.—Gold Hill distrtet; J. H. Latham, O. W. Sawyer, S. D. R. Stewart.

Colossus G. & S. M. Co.—Virginia district; A. J. Smith, Wm. B. Marsh, B. F. Beageley.

Middlesex M. Co.—Gold Hill district; Wm. Arrington, H. B. Summers, S. D. Falls, G. H. Chapman, S. W. Carr.

Kate G. & S. M. Co.—Gold Hill district; J. W. Epley, C. McVicar, J. Sutter, J. Glavery, H. Huguet.

Marshal Ney Consolidated Co.—Devil's Gate district; J. McCarty, F. A. Sawyer, M. Burger.

Western G. & S. M. Co.—Desert district; N. A. Guild, B. E. Green C. C. Green, E. E. Rice, Geo. T. Finn.

Professor Whitney's Lecture.—Extra copies of the MINING AND SCIENTIFIC PRESS of February 6th, 1864, containing the lecture of Prof. J. D. Whitney, (State Geologist,) on "MINING AND ITS RELATIONS TO CIVILIZATION AND PROGRESS," can be obtained by calling at this office.

Correspondence from competent writers is respectfully solicited upon all topics of interest to the general readers of the PRESS. Persons possessing a knowledge of new discoveries, curiosities, important improvements or developments, who have not the time or experience to write their observations elaborately, can send us the substance in a few words, and we will care for the rest. The real name of the author must be received, which will be kept confidential.

REAL DEL MONTE
Consolidated G. & S. M. Company.

The Special Meeting

OF THE STOCKHOLDERS OF THE ABOVE COMPANY, HAS BEEN POSTPONED UNTIL SATURDAY EVENING, MARCH 5th.

By order of the Trustees,
1t W. P. WILLARD, Secretary.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of this paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

W. O. ANDREWS,
NOTARY PUBLIC,

"CHIPPINGS."

Prof. Agassiz prophesies that Cape Cod will in time be entirely washed away by the action of the sea. The work is going on very rapidly.

The Pacific Railroad is in course of construction from Leavenworth, Kansas, at the rate of a mile a day.

Some pathologists claim that diptheria has been occasioned by the introduction and use of kerosene oil.

Death comes to a good man to relieve him; it comes to a bad one to relieve society.

The editor of an eastern paper says that many of his patrons would make good wheel-horses—they hold back so well.

The Beautiful.—Though we travel the world over to find the beautiful, we must carry it with us, or we find it not.

What a wouderful thing is starch, and what a pity it is we cannot dip some weak minds in it.

Curran described a politician as "one who, buoyant by putrefaction, rises as he rots."

A contemporary thinks the Empress Eugenie's insuring her life to the extent of £200,000 the best fashion she ever set.

A new cathedral is about to be erected in Havana, built wholly of iron, the estimated cost of which is $100,000.

The Virginia papers say that travel to Reese River is rapidly on the increase.

The waters of the Sacramento river at Sacramento stand at about 3 feet 6 inches above low water mark, having risen none of any consequence since the rainy season commenced.

The ship Governor Landon cleared last week for Liverpool, with a cargo consisting of 35,092 100-lb. sacks wheat, and 7½ tons copper ore, valued at $56,817.61.

Ground has been broken at St. Paul, Minnesota, for a theater building, of polished stone, to cost $50,000, capable of seating 1,300 people.

The Yreka *Journal*, of the 27th, says that the telegraph line will be in complete working order to Portland in about a week.

The Wide West mill, which recently stopped running for a few days, has resumed operations. It is now employed on Garibaldi rock.

The Central Pacific Railroad Company has received another engine called the "Pacific."

Mount Hood Smoking.—The Portland (Oregon) *Union*, of latest dates received, says: "Yesterday there was a considerable volume of smoke issuing from the summit of Mount Hood. It was distinctly seen by persons in this city, who say that there can be no doubt that it was smoke and not clouds."

Those who complain that our navy has accomplished nothing will do well to make a note of the fact that, since the war broke out, 1,328 blockade-runners have been captured, of which number there were 547 schooners, 479 steamers, 131 sloops, 30 brigs, 26 barks, 15 ships, and about 100 smaller craft.

The city of London, in ten years, has increased in population 441,753; New York, 290,104 souls, or 56.37 per cent., and Philadelphia 222,484 inhabitants, or 65.43 per cent. The average number of houses during ten years built in London was 5,349; in New York, 1,568; and in Philadelphia, 2,805. London has been settled 2,000 years, New York 249 years, and Philadelphia 178 years.

Restoration.—The human body, in so advanced a state of decomposition as to be entirely unrecognizable, can now be so restored, by chemical means, as to present an almost completely natural appearance. This process was lately practiced with success in London.

Great Breakwater.—The greatest artificial harbor in the world is that of Cherbourg, in France. It was a roadstead open to the sweep of the ocean swells until 1783, when DeCessart, an engineer, proposed and commenced the construction of its famous breakwater. This consists of a sea-wall 12,700 feet in length, which also stands 15 feet above the highest tides.

Plant Sun Flowers!—One of the most scientific officers of the United States Survey has recorded his testimony, that the common sun flower planted upon the low bottoms of the Mississippi river, absorbs the miasm of those unhealthy localities, and rids the neighborhood of miasmatic fevers. As the seed can be had at any of our seed stores, costs a mere trifle, is easily planted, makes a somewhat ornamental plant, and produces a crop valuable for fowls, we say, let every one plant a row of sun flowers on the lower side of their garden.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,
First street, between Howard and Folsom streets,
SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz mill machinery, Mining Pumps, Amalgamators, Retorts, Etc., Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

A. S. HALLIDIE & CO.,
WIRE ROPE MANUFACTURERS.
Established 1857.
Office, No. 412 Clay street—Works, North Beach,
SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for
HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners, Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to any thing now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

To Druggists and all Prescribing for Neuralgic and Nervous Cases—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

G. VENARD,

No. 627 Front Street, San Francisco,

SOLE AGENT FOR CALIFORNIA AND THE PACIFIC COAST.

This Compound has undergone the examination of the most competent Chemists in France and England, and has been pronounced all over Europe the BEST ARTICLE ever found for removing Scales in Steam Boilers, this great evil of industry.

The main qualities of this Compound are: that it removes the scales of any boiler in a few days, no matter how old, and it does not injure the metal in the least. The raising of steam is made easier. It saves fuel and work, and prevents all dangers of explosion.

The Compound has now been in use for three years, and the great success obtained in the Old World induced the undersigned to introduce it in this State, being confident of the patronage of this enlightened and industrious country. G. VENARD,

No. 627 Front street, San Francisco.

Honigsberger, Copperopolis.

8v8-4t M. G. ELMORE, Sec'y.

To the Stockholders of the Real del Monte Consolidated Gold and Silver Mining Company.

The undersigned, who were appointed a Committee at the meeting of the stockholders on Friday night, have met and determined upon the following measures for the present:

1st. The appointment of a first class book-keeper to examine the books and accounts of the corporation, and report upon its condition.

2d. The appointment of two gentlemen of ability, one a superior mineralogist, and the other a skillful mining engineer, to proceed together and visit the mine, and ascertain and report accurately upon its condition and prospects.

In order to carry out the objects of the stockholders upon the plan adopted by the Committee, a fund will be required of about twenty-five hundred dollars, which will be a tax of about one dollar per share upon the number of shares represented at the meeting of stockholders. Mr. James J. Robbins has consented to act as Treasurer, and the stockholders are requested to pay their contributions of one dollar per share at his office, No. 609 Clay street.

Unless this is promptly attended to, the important inquiry placed in our hands will fall to the ground.

We have also determined to warn the public against buying or dealing in any of the promisory notes or other evidences of indebtedness issued by apparent authority of the Corporation, as we are advised that the debt created is illegal, and the notes will consequently be void in the hands of any person, however innocent of their origin.

JAMES J. ROBBINS,
WM. BUCKLEY,
ALEXR. WARFIELD,
S. HEYDENFELDT.

The Law for Publishing Legal Mining Notices.

An utterly erroneous opinion having been engendered in the minds of some (through misrepresentatious and interested motives of others), that the laws of this State technically require the publication of mining notices to be he made in a daily paper, we take occasion to quote the following positive passage concerning the publication of mining notices, from the latest statutes passed by our Legislature on the subject, March 5th, 1861, which has not since been altered or amended:—

"Notice of each such call, or assessment, shall be given to the respective stockholders personally, or shall be published once a week for at least four weeks in some newspaper published at the point designated as the principal place of business of the corporation, and also in some newspaper published nearest to the point where said mining operations are being carried on. If, after such notice has been given, any stockholder shall make default in the payment of such call, or assessment, as to the shares of stock held by him, so many of such shares may be sold as will be necessary for the payment of the call, or assessment, on the shares held by him. The sale of said shares shall be made as prescribed in the by-laws of the company; *provided*, that no sale shall be made except at public auction to the highest bidder, after a published notice of thirty days, published as above directed; and that at such sale the person who will agree to pay the call, or assessment, so due, together with the expense of advertisement and the other expenses of the sale for the smallest number of whole shares, shall be deemed the highest bidder."—Passed March 5th, 1861—Stat. 1861, p. 14.

The above is indeed plain, and we hold ourselves responsible for the assertion that a weekly issue of a mining notice is as valid as that of a daily. By publication in the Mining and Scientific Press, a wide circulation is given to notices, particularly among miners and shareholders in this city and throughout the State and Nevada Territory. A weekly publication is also secured at a material saving in cost to shareholders.

Give the Name of the District.

We are requested to call the attention of Secretaries of Mining Companies to the importance of inserting in their advertisements of whatever character, the name of the district or locality. Considerable trouble arises from this neglect, as there are Companies bearing the same name, although situated in different localities. Attention to this matter will not only be a benefit to others interested in Mining Companies, but also to the Secretaries themselves.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Bankers Gold and Silver Mining Company, Gold Hill, Virginia District, N. T.—The Annual Meeting of the Stockholders of the Bankers O. & S. M. Co., will be held at their office. No. 620 Washington street, San Francisco, on Tuesday, March 1st, 1864, for the purpose of electing Trustees for the ensuing year and the transaction of such other business as may be necessary.

7v8-3t W. AUG'S. KNAPP, Sec'y.

El Dorado Consolidated Gold & Silver Mining Company, Devil's Gate District, Nevada Territory.—Office 113 California Street.—San Francisco, February 3d, 1864.—At a meeting of the Board of Trustees, of the El Dorado Consolidated Gold & Silver Mining Company, held this day, an assessment of one dollar ($1) per share was levied upon each and every share of the Capital stock of said Company, payable immediately, in United States Gold Coin, at the Office of the Company in San Francisco, or to H. F. Rice, at Carson City, Nevada Territory. By order of the Board of Trustees.

February 4th, 1864. [7v8-4t] JNO. F. POPE, Sec'y.

Emmett Copper Mining Company, Office No. 615 Clay Street, San Francisco, February 6th, 1864.—Notice is hereby given to the Stockholders of the Emmett Copper Mining Company that an assessment, No. 3, of 25 cents per share was this day levied on each and every share of the Capital Stock of said Company, payable immediately in United States Gold Coin, to the Secretary, or to L. Honigsberger, Copperopolis.

7v8-4t M. G. ELMORE, Sec'y.

Cræsus Gold and Silver Mining Company, Turnback District, Tuolumne county, Cal.—At a meeting of the Board of Trustees of the Cræsus Gold and Silver Mining Company, held the 4th day of February, A.D. 1864, an assessment of ten cents per share on each and every share of the capital stock of said Company, was duly levied, payable immediately, in U. S gold coin, to the Secretary, at the office of the Company, south-east corner Howard and Second streets, San Francisco. By order of the Board of Trustees.

San Francisco, Feb. 5, 1864. [6v8-5t] J. F. HARRIS, Sec'y.

Bay State Gold and Silver Mining Company, Turnback District, Tuolumne county, Cal.—Notice is hereby given, that the annual meeting of the stock-holders of the Bay State Gold and Silver Mining Company, for the election of officers for the ensuing year, will be held on the first Monday in March, at the office of the Company, south-east corner Second and Howard streets, San Francisco. By order of the Board of Trustees.

San Francisco, Feb. 5, 1564. [6v8-5t] J. F. HARRIS, Sec'y.

Crockett Copper Mining Company, Copperopolis, Cal.—Notice is hereby given, that at a meeting of the Trustees of the Crockett Copper Mining Company, held January 2d, 1864, an assessment of one ($1) dollar upon each and every share of the capital Stock of the Company was levied, payable immediately, in gold coin, to the undersigned, or to J. M. Pike, at Copperopolis; being assessment No. 2. On the 1st inst. the Trustees also levied another assessment, being No. 3, of one ($1) dollar per share upon each and every share of the capital stock of the Crockett Copper Mining Co., payable the same as assessment No. 2. Persons having interests in the Company are requested to come forward, prove title, and receive their certificates of stock. ISAAC HECHT, Sec'y,

No. 417 and 419 Sacramento street.

San Francisco, February 5th, 1864. 6v8-5t

Office of the Montezuma Gold and Silver Mining Company, No. 62 Government House, corner of Washington and Sansome streets, San Francisco. Feb. 5th, 1864.—Notice is hereby given, that a sufficient number of shares of the capital stock of the Montezuma Gold and Silver Mining Company, standing in the name of the following person, will be sold at public auction, at the sales room of Jerome Rice & Co., No. 327 Montgomery street, on WEDNESDAY, March 9th, 1864, at 11 o'clock A. M., to pay an assessment of 12½ cents per share, levied April 27th, 1863, together with expenses of advertising and sale, unless said assessment is previously paid with accruing charges—viz: Hugh McCormick; 247 shares; amount due, $30.87½. By order of the Board of Trustees.

6v8-5t C. A. CRANE, Secretary.

Editorial.

VENTILATION OF MINES.

From what has already been said upon the subject of mining ventilation, it will be perceived that a continuous current of air through a mine can be effected only by producing two columns of air, one of which shall be lighter than the other; the lightest ascending and its place being supplied by a descending of heavier or denser air. In sinking a shaft, after reaching a depth of fifty or sixty feet, more or less, according to accidental circumstances, ventilation can only be effected by establishing this condition. Under favorable circumstances, and to a limited depth, a current may be established naturally.

This current is established as follows:—In winter the air in the bottom of a shaft, which is being worked, soon becomes heated by contact with the walls of the shaft, which are then warmer than the outside atmosphere, and by the animal heat, and vapor evolved from the workmen. This heated air finds a natural exit upward along the walls of the shaft, while its place is supplied by a down current occupying the center of the shaft. In summer this mode of ventilation is much less reliable, from the fact that the air on the surface is then, especially during calm, sunny days, warmer and consequently lighter than the air which naturally exists at the bottom of the shaft. Natural ventilation, under such circumstances can only be kept up by incidental causes—such as the movements of surface current, (winds,) the liberation of lighter gases, or the percolation of water, which latter cause has a tendency to produce a downward current along the walls of the shaft—the reverse, it will be noticed, of the movement of the columns in winter. The greater the superficial dimensions of the shaft under these circumstances, the more easy is the renewal of the air effected.

To aid and quicken natural ventilation in an isolated shaft, ventilating partition frames are employed. That is, the shaft is divided into two compartments by a thin board partition continuing from the mouth of the shaft downward as the workmen descend. The joints of this partition should be as close as is consistent with the rough work; the interstices between the planks being caulked, or covered with stiff clay, or something equally impervious to the atmosphere. If with this assistance the ventilation is not sufficiently established, a chimney should be erected over the smaller partition, and carried to some considerable hight above the mouth of the main opening to the shaft. By this means the miner will almost invariably secure a difference of density, or weight, in his two columns of air, as illustrated in figure 4, number eight of this volume, and consequently fully establish the current necessary for proper ventilation. When the shaft is on the incline of a hill, the chimney may, if more convenient, be carried upward along the surface of the hill slope to any desired elevation.

If the excavation be a gallery or tunnel, (the latter term is most commonly used in California) with but one opening to the atmosphere, a similar partition may be carried along the tunnel as it progresses, occupying but a small space in one of its upper angles. In this case the better arrangement is to construct a frame, or long box, made like an underground drain, of four boards carefully nailed together, with the sections adjusted into one another like the joints of a stove pipe. The joints should be made as close as possible, and will be all the more serviceable if carefully caulked and pitched. This arrangement will be found more serviceable if the farther or last joint put up is made funnel shaped, presenting as large an opening as is consistent with the space to spare in the tunnel. This latter section may be constantly carried forward and the new ones inserted between it and the main line of pipe, as it may be termed. This pipe or chamber should always be constructed as large as is consistent with economy and the working space required in the tunnel or gallery.

When a shaft or tunnel is thus divided by a partition, it may be considered the same as though the workings were connected with the exterior atmosphere by two separate openings—as by the tunnel mouth and an air shaft, or by two shafts. The application in this instance of the laws of the movements of aeriform fluids as already defined in our previous articles under this head must be perfectly apparent to even the most casual reader. The partition issuing from the tunnel, may be extended by a perpendicular chimney, or upward along the incline of the hill, as already described in case of the isolated shaft.

It will readily be perceived that the arrangement described for use in tunnels will avoid all necessity for air shafts, which are oftentimes opened at great expense. The New Almaden Quicksilver mines have been ventilated upon this principle for several years. It was first introduced there, if we are not mistaken, by the present and long time efficient superintendent, Sherman Day, Esq.

Natural ventilation is always better in temperate or northerly climates, than in hot or equatorial regions. This is caused in part from the fact that the difference between the temperature of the walls of the excavation and the atmospheric air is greater in winter or cold weather, than in summer or warm weather. The same favorable difference is observable between the cooler hours of night and the warmer hours of sunshine. In addition to which the presence of the workmen, the lighted candles, the steam with which the air of mines is constantly saturated, etc., all act as an augmentation of temperature in the mine, and consequently aid in giving intensity to the outflow of air through the upcast shaft or opening, whatever it may be. Of course, for reasons already given, whenever in natural ventilation the atmosphere rises to a greater temperature than that in the mine, the current of ventilation will change its direction. When there is very nearly an equilibrium between the exterior and interior atmosphere, the ventilating current is noticed to oscilate from one direction to the other, disturbed from the slightest agitation of the atmosphere either within the mine or upon the surface.

Hence it will be seen that natural ventilation is subject to frequent irregularities, and is sometimes altogether insufficient without some artificial aid. When such aid is resorted to, the process is styled artificial or physical ventilation. We propose to devote a final chapter to this subject.

COPPER MINES.

The Lake Superior *News and Journal*, in its issue of January 8th, publishes a very able article on mining matters, in which, after showing the results obtained by well-conducted companies in that region, such as the Knowlton, Caledonia, and Bohemian, it says:

Such are the practical results of the proper management in copper mining. It is more than to own good ground, with the stock placed, with an agent working it, but with all this done and its productiveness proved—that sufficient money be furnished by the stockholders to fully and properly open the ground with such machinery as will also make its products to the fullest extent available, this may take $200,000, but what of that, if then—as any good mine will—it will return from $100,000 to $200,000 in dividends, with the value of its stock increased ten-fold. The only reason why we have no more Quincy, Pewabic and Franklin mines, is because so few have pursued the policy they did, or rather, adopted the efficient means they did to develop them. There is plenty of just as good ground, to say no better, as they possess, and with equal improvements, with the same working, would stand in the same rank.

The above remarks from the *News and Journal* apply equally well to mining operations in this State. It is useless to expect that copper mining will prove generally remunerative here until capital is brought to bear, both in developing our mines and in the erection of machinery. In California, as elsewhere, we can only now and then expect to find a mine that will pay its way from the start, as the "Union" has done. We have as yet but three or four copper mines in the entire State which have been opened so as to admit of anything like an extensive and systematic working, and we are fully satisfied that but very few will ever be developed into valuable mines except by means of a large outlay of capital. Fifty, seventy-five or an hundred thousand dollars, intelligently invested in opening up a mine and the erection of machinery, for concentration, may be considered a reasonable figure. No very bright prospects, as a general thing, are to be expected from no assessments at all, or even from 50-cent assessments. It will be found sound policy for our copper miners, even after they become fully satisfied that they have a "good thing," to be liberal with capitalists, and secure a thorough opening of their mines at the start. Organized companies will be wise if they assess largely and sufficiently to place themselves at once upon such a sound basis that failure will be impossible.

Communications.

[Written for the Mining and Scientific Press.]

The Desert and Its Mines--No. 2.

BY J. E. CLAYTON, M. E.

We will commence our investigation of the mines of the Great Desert hy an examination of the mines along the line of the Colorado. The first district of importance liee on the east side of the river, and some thirty or forty miles north of the Gila, called "Castle Dome," from a mountain of that name, where the principal mines are located. Large veins of quartz, with very rich eopper ore, have been discovered, some of whieh may prove valuahle when opened to the proper depth. The prohabilities are, however, that those quartz veins that are pockets on the surface will also prove to he pockets in the depth. I am aware that the popular belief is that veins are richer and larger at a great depth than at the surface; but my observations in the mines of Georgia and Alahama, and through the whole of Califoruia and a large portion of Nevada Territory, lead me to a very different conelusion. As a rule, the mine or vein that is not rich at the surlacc will not be rich in the depth. This is especially tho case with goldbeariug veins. Silver and eopper veins are frequently found to increase in the yield of metal as you approach the water liue, at which depth they generally give their highest yield of metal. There are two eauses for this result; the silver or eopper was first in the form of a sulphide or sulphuret. As the ravines and cañons were worn down, the veins were drained to a line more or less near the level of their ehannels; this, as a matter of eourse, admitted the atmosphere to penetrate the veins as far as the waters receded. The oxygen of the atmosphere commenced a slow hut sure decomposition of all the exposed sulphides or sulphurets, ehanging them iuto sulphates, whieh are soluble in water. The coutinual percolation of water from the surface down to water-line has slowly earried the sulphates to a greater depth, where it has formed chlorides, if any salt was present, or else entered into ehemieal union with other substances in solution at the water line, and for some considerable distauce helow; but after we have reached the level of the *lowest drainage* in the neighborhood of the vein, we need not expect any further increase of its richness, for the reason that there can be no displacement and infiltration below that point.

This rule will not hold good with veins of gold, because gold cannot he ehanged by the action of the elements, and be transferred hy a solvent from a higher to a lower position; bnt in practice the rule works the other way, for gold-bearing veins almost invariably yield more gold, per ton, *above* the water line than they do helow. Here we recognize the same causes that produce the changes in silver and eopper ores—namely, the *decomposition* of the sulphurets of iron which contain a large proportion of the fine gold, which is thus let free hy the oxidation of the sulphurets, and is therefore more easily saved than if the sulphurets remained solid. Thus we see that the same eauses that *increase* the yield of silver and copper veins, as we go down upon them, to the the lowest point of drainage, *decreases* the yield of gold veins in about the same ratio.

I do not make these statemeuts for the purpose of discouraging any one from engaging in the husiness of mining, hut because the truth must be told though the h-avens fall; and because the iuterest of legitimate miniug demands that the facts that have been developed by tho experience of the last three centuries shall he mado known to the inexperieuced.

The reader will pardon this digression, and at some future time I will diseuss the subjeet with "popular belief" at greater length than the limits of this article will permit.

But to return to Castlo Dome District. Late discoveries made there proves it to be rich in deposits of argentiferous galena as well as eopper. The veins of galena are said to be large and well defined, and in many of them silver is found to he the predominating value. The silver lead veins are found on the westerly side of the district, and near enough to the river to mako transportation easy and cheap. In many of these mines are found old work done by the Spauiards long years ago—at least that is the sup-position, as the uative tribes are entirely ignorant of the art of mining. The richest of ore will be shipped without any dressing beyond close eorting, and I think that will be found the most profitable way to work the mines of this district, for the reason that the miners in that ease ueed but little eapital to open and work their mines. They ean take an outfit of tools and provisions sufficient to last them five or six months, and in that time they can get returns from their first shipments with whieh to replenish their supplies. And I may remark here that the above suggestions will also apply to all the eopper districts ou the line of the Colorado river. Reduetiou works will he found very expeusive and unprofitahle affairs in this desert region for many years to eome.

The next district above Castle Dome is ealled the "Weaver District," and its depot for supplies will he at Olive City. The prineipal mines in this district are copper, assoeiated with a hard white quartz gangue. The veins are irregular and lenticular in form, and notwithstanding the great riehness of the ore, I must say that I have hut little faith in the continuance of these mines to any great depth. In addition to the copper veins in this district there has been found a very rare mineral, composed prineipally of silver and mercury, in the form of native amalgam, or a combination of the ores of the two metals. This vein hids fair to prove of great value and is highly prized hy the owners.

The next district above the Weaver, is the "La Paz," whieh extends to the eastward from the river some forty miles, and iueludes the Apaehe Chief and the Sataza and other mines well known to the publie.

The town of La Paz is the largest settlement on the river, and will eventually be the great supply depot for the central portion of Arizona Territory. A good wagou route has been recently explored and loeated by Herman Ehrenhurg & Co., to the new plaeer mines known as Walker's Diggings, and to the Apaehe eounty on the heads of the Gila, and little Colorado rivers.

When the mines of Arizona are opened to safe occupaney, by subduing the wild tribes that now iufest that riehest of all our mining territory, the towns of Fort Yuma, La Paz, and Fort Mojave, will become large cities; for it is a well ascertained faet that those three depots must supply nearly all of Arizona with provisions, tools, maehinery, and in faet everything used by a mining eommuuity.

The next district above La Paz is the Williams Fork District, which is perhaps one of the riehest copper districts on the Colorado, and it appears to he the northern limit of the eopper region on the east side of the river.

On the west side of the river there are three copper districts—The Chimewawa District uearly opposite La Paz; the Freeman District opposite Williams Fork; and the Eretaba some sixty miles above and about twenty-five miles south-west of Fort Mojave. Above this point there has been no copper of any importance diseovered. The reader will observe that there are six miniug districts between Fort Yuma and Fort Mojave—three on each side of the river—and that the preponderat ug metal is copper, and we might safely say that it is the only metal yet found in workable quantities, exeept the lead mines in Castle Dome District. The extent north and south of these copper mines is about two hundred miles, and the width is unknown, as the couutry is not explored to any great distance back from the river, owing to the absence of water and grass.

North of the eopper couutry we fiud gold and silver as the predomiuant metals. First above Fort Mojave on the east side of the river is the San Francisco District, in whieh is located the Great "Moss Ledge" of which you have heard such briliant accounts.

On the east side of the river is the "Rock Spring" District, which is some forty miles this side of the Fort, and on the road to Los Angeles. Next, above Mojave, about sixty miles, is "Eldorado Cañon;" and the next and farthest north of all is Potosi District, forty or fifty miles north-west of Eldorado Cañon. These four districts include all the mines of any importance, north of the copper districts, and cover all of value that is yet known within reach of the river, except the head of navigation. As these districts have been so often deseribed, and are so well known, I have merely pointed out their locality, for the purpose of showing their dependence on the Colorado river as a base of supply, and line of communication north from the Gulf of California.

In my next number I will point out the lines of commuuication overland, across the Desert.

A Hint for the Postal Agent.—A letter from Virginia, N. T., March 3d, says:—"There is no doubt that the post offices are very poorly eonducted. Some of your letters are five and six days getting here. I received a letter from Marysville that was 21 days coming; and I have known letters to be 16 days arriving from San Francisco, and another 17 days going from here to Silver City."

[Written for the Mining and Scientific Press.]

San Louis Obispo Correspondence.

A correspondent writing from San Louis Obispo under date of March 1st, 1864, speaks in somewhat unfavorable terms of the seaworthiuess of the steamer Senator, upon whieh he had just made the trip from this eity. The writer had beeu out to the old Mission of San Louis Ohispo, distant some nine miles, where he found mueh exeitement existing with regard to mines and "feet." Our correspondent adds:—

The mines of San Louis Ohispo are a broken, volcanic region, lying, hetween the Coast Range and the San Margarueta mountains. This range of mountains runs nearly north-west and south-east. The general formation is a talcose, chloritic upheaval, with a large amount of hornblend houlders, forming an amygdaloidal structure, which deserihes the general formation of the cupriferous deposits of this county. On the south-west, bordering this talcose formation, seven peaks rise up from one to three hundred feet high, eomposed of a porphyritic granite. These peaks all stand in a direct line, running from San Louis, due south-west, terminating with the well known Maro Roek whieh stands on the margin of Maro Bay. This rock is about 200 feet high and eovers some two or three aeres of superficial space. I am told that it has a fine fresh water spring on its summit. This Maro Bay, it is thought hy some will eventually heeome the shipping point for the eopper ores of this region, and some enterprising individual has already secured the locality for a town site, and erected thereupon a small house.

The eopper ores of this region are generally of a superior quality, consisting of eopper glance, green carbonates, sulphurets, red and black oxides and native copper, apparently of an eleetro galvanic deposit. The croppings are found traversing the talcose slates, in a south-east and north-west direction. They are numerous; and no less than one hundred to two hundred claims have already been recorded iu the different districts. In addition to copper, several good quicksilver claims have been taken up, from whieh I have been shown as fine cinnabar as nature ever produced. We expect these mines will eventually equal the famous New Almaden mines in value. I have just been out to examine a large deposit of stratified bituminous shale which runs for miles in the prevailing direction of south-east and north-west, dipping to the east at an angle of about 35 degrees. This deposit is strongly impregnated with bitumen. It appears to be inexhaustible and is found only ten miles from shipping. What is most wanted just now, for this region, is some enterprising owner of a sea going steamer or sailing vessel, to open up a trade between the people of this section and San Francisco, and the establishment of a warehouse at San Simon Bay. The man who gets the start in this business, will open the way to a fortune.

SINGULAR PHENOMENON.

I witnessed a singular phenomenon a few days since, on the Santa Rosa Creek, six miles from the ocean. A brisk shower of rain snddenly commenced falling at the locality indicated, at a time when the sky was clear in every direetion, without a cloud in sight. A gentleman who has resided in this loeality four years assures me that this phenomenon is frequently witnessed in the eañous on the the upper waters of this creek. E. H.

An Attempted Mining Swindle.—A Virginia City eorrespondent furnishes us with the following particulars of an attempt to swiudle, which came to his knowledge a few days since: A gentleman went from Virginia to Silver City to examine a claim, into which he thought of buying. He descended the shaft with one of the owners. who took up a few pounds of rock apparently directly from the vein in the bottom of tho shaft. The rock was taken to the surface, reduced in a mortar, and yielded a fine display of both gold and silver. To make the thing still more sure, *this* owner would not sell a foot, but told his friend where he thought he *could* buy a few at $20 per foot. Our friend, however, was not exactly the "greeny" he was taken for, as it appears he took the precaution, after dark, to pay the shaft another visit, when he took some rock from another portion of the vein, submitted it to the same process as the first, with a result of *nix!* The proof was plain that the mine had been "salted," and our friend saved his money. Such practices are swiudles of the worst character, and should be frowned upon hy every honest man. We know no difference, in enormity, between such a crime and downright robbery.

[Written for the Mining and Scientific Press.]

Virginia City--Her Mines, Growth and Future Prospects.

A correspondent at Virginia City writes as follows: I am almost at a loss for language to describe to you the vast and substantial progress that has been made in this City of the Mountains within the past five years. Truly the old and trite Bible-saying that "out of nothing God made all things," may be appropriately applied to Virginia City. When standing on the top of Mt. Davidson, some four years ago, and looking east, there was nothing visible but rocks, sage-brush, scrubby cedars and alkali plains; on turning to the west, at a distance of about twenty miles, your eye rested upon a dense and lofty growth of noble pines, which appeared in strange contrast with the immediate vicinity upon which I was standing. Little did I then suppose that out of those stately monarchs of the forest there would so soon be built the populous and thriving city which now exists at the foot of the mountain.

The scene is again changing, for in the place of the original wooden structures, hundreds of substantial fire-proof edifices are now being or have been erected. Perhaps it may seem fabulous to those that never visited this land of gold and silver, yet it is true that Virginia City is to-day second to but one city on the Pacific slope in population and business.

Since my first visit there, many leads have been discovered and claims opened, yielding results scarcely to be anticipated; and yet mining here is only in its infancy. As evidence of this, we have only to refer to the increasing amount of bullion that is daily being shipped from this place. The mines here are just now exciting a new interest, from the fact that there are numerous lawsuits now pending between parties who claim that there is but one Comstock ledge, and those who claim that there are more than one. In passing, I may state that I have been informed by parties who appear to be posted, and who have no other interest than to tell the truth, that *there are two separate and distinct silver and gold-bearing quartz leads, running parallel with each other, and about sixty feet apart.*

It is very evident that the big fish are trying to eat up the little ones. At this I am somewhat surprised, because there is enough ore in such claims as the Gould & Curry, Mexican, Central, Ophir, Savage, Challar, California and many others too numerous to mention, to last the present owners as long as any of them will live. Should they continue even past the ordinary age of man, they will not be able to work out their claims. To speak within bounds, there are not in the whole world so many rich ledges, in the same scope of territory, as there is within a radius of ten miles in what is properly known as the Washoe mines. To give you even the briefest description of the many scores of mills that have been erected here within the past four years, would require more time than I have to spare. Anything like a full account of the Gould & Curry, alone, would fill up at least four numbers of your valuable paper. This is undoubtedly one of the most costly and extensive mills ever built for the reduction of gold and silver ore. To attempt to tell you what the future of Virginia will be, would be almost futile; but judging the future from the past, we may reasonably arrive at the conclusion that Virginia City, Gold Hill, Silver City, Dayton and American City, will eventually be one and the same place, better known, perhaps, as the Consolidated City of Silverland.

ALPHA.

TRADE MARKS AND THEIR USE.—If the reader possesses a knife of a well known maker and opens it, he will see that, in addition to the name, there is a Maltese cross and a plain cross stamped upon the shoulder of the knife. This is the trade mark, the endorsement of the firm with respect to its excellence. This trade mark is very valuable; possibly the manufacturer would not sell it for $20,000. There are other trade marks almost equally valuable. An adze maker will select as his mark a pipe; another will put on a hatchet, another a lion, a fourth a goat, according to the class of men whom the tool or implement is likely to reach. The reason why trade marks are stamped on this kind of "dry-goods" is that they are often made for a distant market, where the peasantry can understand a simple emblem, when they would not be able to read a makers name. The Canadian backwoods man, for example, has found that his old adze marked with a pipe was excellent; he therefore demands a new adze with a similar mark upon it. The name of the maker he may not be able to read, any more than the savages to whom the goods are sometimes sold.

WORK on the extension of the California Central Railroad, beyond Lincoln, toward Bear river, has been commenced. The line will cross Bear river a short distance below Johnson's Crossing.

FROM JORDAN CREEK.—The Virginia *Enterprise* has seen some specimens of gold bearing quartz from Jordan Creek mines, 150 miles north of the Humboldt mines, which the editor describes as exceedingly rich. The rock is completely covered and filled with native gold in very coarse pieces. The gold contains so great a per cent. of silver in sulphurets, it is of a dark, mottled appearance. As yet there are but few persons mining in the vicinity, but those who are there have been taking out from ten to twenty ounces of gold per day with rockers. The dirt is decomposed vein matter found around and below the numerous leads. The lead from which the specimens shown us were taken, is said to be about five feet wide. If any great portion of the vein is as rich as the rock we saw, it is equal to the famous Ish lead in Oregon. Mr. Jordan, the discoverer of the "Jordan Creek" mines, recently left this city with machinery for a quartz mill to be erected at some point in that vicinity.

Snow fell to the depth of eight inches in these mines last fall, about the middle of November, but afterwards melted off and some good weather followed. There is an abundance of good pine and fir timber in the mines, also any amount of water for all purposes. When Mr. Jordan left last fall there were some seven hundred men working in the mines, but only a few persons wintered there. There had been eighty-four distinct leads discovered last fall, varying in thickness from eight inches to forty feet. These leads, or a great many of them, are situated on the hills from which flow the various tributaries of Jordon Creek, and most of them are quite rich in gold. Men were mining for a distance of fifteen miles along the main creek, also many were mining on the streams and on the hills about where the quartz veins are found. Many of the quartz veins are said to be immensely rich, as is shown by a large number of assays made in San Francisco. The metal is chiefly gold—one quarter, perhaps, silver. Mr. J. thinks the diggings are quite extensive, and says there is a large scope of good looking mineral country that yet remains to be prospected. Twenty-feet is the greatest depth which has yet been attained in any of their claims.

THE ASTOR MINE, GOLD HILL.—A large amount of the stock of this mine, we believe, is held in this city. A correspondent at Virginia City writes us in substance as follows in regard to it:—The mine is located in the well known Crown Point Ravine They have now a tunnel in about 300 feet. A good looking ledge, 14 to 16 feet thick, was struck about 150 feet from the mouth of the tunnel, and the company expect to strike their main ledge during the present month, the croppings of which prospect well in both gold and silver. They also expect to encounter a heavy stream of water, which will be very valuable, as the mills below are paying at the rate of $100 per month per inch for water. The Astor is already selling three inches at the above rates. The company contemplate the erection of a mill when they strike their second ledge. The work on the mine, at present, appears to be conducted with energy and efficiency, under the superintendence of E. A. Hive, Esq.

AMERICAN FLAT CLAIMS.—The Virginia City *Enterprise* says that nine-tenths of the claims in American Flat derive their value only from the probability that there is a rich ledge running through that locality, and that they are upon it. The Uncle Sam ledge is immensely rich, and it is the opinion of some that it makes a bend and runs down the west side of Gold Hill canon, towards Devil's Gate; others declare it must extend through American Flat proper; a number invest their money upon the supposition that it follows the range of hills west of American Flat, and a few wisely determine upon mature deliberation, that it plunges into the mountains still further west, and loses itself in the bowels of the earth. It is amusing to hear these various theories amplified upon by owners of claims in different localities. All scout the idea of ground being worth anything that is situated anywhere but in the immediate vicinity of their respective mines.

STEAM DOOMED.—There can be no doubt but that engines worked by steam, the employment of which is always attended by so great a loss of heat, will eventually be superseded by air or calorie engines, where there is no loss by condensation. Theoretically, air engines are perfect, and the practical difficulties that prevented their adoption are being overcome.—*Intellectual Observer.*

THE CHURCHILL MINES.—The Virginia *Union* gives an interesting account of the work of development now in progress upon these mines. We condense as follows:—It will be remembered that a good deal was said some two or three years ago about certain silver-bearing lodes situated a couple of miles north of Fort Churchill. The locations were mostly made by Germans and officers residing at the Fort Among the former were men of much scientific knowledge and practical experience in mining, and for a time the utmost confidence was felt in the ledges at that point, as was evinced by the heavy outlay of labor expended upon them. Several tunnels were commenced and carried forward with due diligence, but the means of the parties being limited they stopped short of reaching the ledges which it was intended they should strike at a good depth beneath the surface. We are glad to learn that operations have been resumed upon one at least of these early locations. A company of capitalists and thorough going business men, prominent among whom is Captain John Kelley, of San Francisco, have taken hold of the old Governor Nye ledge, German Company, and are sinking a shaft at a new point, the work being pushed day and night, and with a determination to prove its character at an early day. Over eight thousand dollars were expended on this ledge before it came into the hands of the present owners. It is the intention of the Superintendent, Mr. A. H. Lissack, to sink the shaft to the water level, supposed to be about 200 feet down, and then drift into the ledge. This shaft is now down 110 feet. Numerous assays establish for this ledge a high value, these tests running from two and three to thirteen hundred dollars per ton. Some working tests, made at Rigby's mill, American Flat, were also highly satisfactory, yielding $112 to the ton. We have before us an assay made by Theall & Co., which gives $37.67 gold, and $465.13 silver to the ton. Mr. Cherry, a well known expert, tells us that he has examined the ore from this mine, and finds it to contain horn silver, a very rich and rare species of ore, and seldom met with except in Chili. He construes it into a most favorable sign. This ledge is large, being 14 feet wide, and seems to carry metal throughout, so much so that not a particle of the rock can be found but exhibits silver under test. What adds to the value of this company's property is the fact that they own a water power on the Carson river, two miles and a half distant from the mine, the road to their mill site being over hard and descending ground. This mine is situated twenty-six miles from Virginia and about two miles in a northerly direction from Fort Churchill. The company intend commencing the erection of a mill in about sixty days, on Carson river. It will carry thirty stamps and is to be driven by water, securing the ready and economical reduction of their ores.

ABOUT CLOVES.—Cloves are produced by a tree which is a native of the Molucca Islands, and were, like nutmegs, a long time under the exclusive control of the Dutch Government, who for many years would not allow the trees to grow upon any except the island of Amboyna, from whence the highest priced cloves still come. The tree is from fifteen to thirty feet high, with large aromatic leaves and bunches of very fragrant flowers. The spice is the unopened flower buds, which are beaten off by means of rods and then dried. The little ball at the top of the clove is the unexpanded petals; by softening the clove in hot water these can be carefully laid open by means of a pin. The main portion of the clove is what would be the fruit if it was allowed to go on and ripen. Our word "clove" comes from the French *clou*, a nail—that being the name by which the French call them, on account of their resemblance to a little nail. They contain a good deal of volatile oil, upon which their value depends. This oil is sometimes extracted in part and the cloves afterward sold. These can be told by their lighter color, and by having the buttons or rounded portion broken off. Cloves readily absorb a considerable amount of moisture, and it is the custom of large dealers to keep them in a rather damp place, in order to make them weigh heavily and look fresh and plump. It is bad economy to buy cloves or any other spice in the ground state, as, aside from the risk of adulteration, the oil is absorbed by the paper in which they are put up.

THE SILVER EXCITEMENT in the Lake Superior region is still on the increase. The Detroit *Free Press* says speculation has already commenced. Men who have taken lands at $1.25 an acre, are selling out at advances of thousands of dollars upon the original cost of their tracts. One tract has been sold for $6,000; the owner bought it a few weeks ago from the Government for $200. The specimens of ore contain liberal quantities of lead and silver.

MINING GOSSIP.

EDITED BY FRANK WARDNELL.

[In this department of the MINING AND SCIENTIFIC PRESS we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and de-merits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free disension to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

NOT A BAD IDEA.—We overheard the conversation of a well-known broker in this city, the other day, who, among other remarks, said: "It is no use talking; if times don't improve in the stock market, and thus give the bulls and bears an opportunity to get even in their late unlucky operations, I don't know what will become of them all;" and, he added laughingly, that the most advisable plan would be to petition to the Legislature to have established, in this city, a home for destitute brokers, for he had not the least doubt but it would, ere long, have plenty of inmates. We thought to ourselves it was not a bad project, by any means; and, if the edifice should be built we would suggest that the building should have four prominent wings, to be called respectively the Wide West, Santiago, Real del Monte and Burning Moscow. The inner sections or rooms might have such pleasing names as Cbollar, Coso, Josephine, etc., which would bring back to the memories of the brokers fond recollections of the past.

APPOINTMENT.—Mr. Ferrie having declined the appointment of Government Inspector of Coal Mines for the eastern division of Scotland, the Secretary of State has conferred it on Mr. Ralph Moore. This gentleman having *satisfactorily passed his examination*, under Mr. Warrington Smyth, has entered upon the duties of his office.

While reading the above item, which we extract from the *Mining and Smelting Magazine*, published in London, the thought occurred to us, whether if our numerous Superintendents of mines in this country were called upon to undergo such examination, how many would be capable of doing so satisfactorily? We may be mistaken, however we will venture the assertion that not one-half of them could do so; and yet people wonder why it is that our mining operations are conducted in such a careless, extravagant, unbusiness-like manner. It would prove a great blessing to those interested in mineral pursuits if they had a Board of Examination established in this country.

LAGER BEER LEDGE.—A gentleman of this city, a few days since, received a long letter from a friend of his residing in Como, Nevada Territory, in which he stated, among other matters, the following:—"A while ago, I made mention of the beneficial effects which the lager of the Como Brewery was having in promoting an increase in our population, and I now have to tell you that within the last few days the entire brewery is discovered to be posted directly on top of one of the finest kind of ledges, of as rich looking quartz as one might wish to see. The ledge is 'blind,' not appearing on the surface at all, but is now found running directly through the cellar, where the beer is kept. It may not have been the remarkable qualities of the beer which produced this ledge, but there certainly was no such ledge known of before the brewery was placed there. It is called the 'Lager Beer Ledge,' and the Whitman Company are sinking a fine shaft in order to prospect the same fully."

PRESENTATION.—Mr. Warren Rose, First Assistant Foreman of the Mexican mine, was the lucky recipient, on the 6th inst., of a very valuable and handsomely engraved gold watch and chain. It was presented to him by Messrs. Hay, Gorrish and Johnson, a committee acting on behalf of the employees.

THE BULLS AND BEARS IN A SQUABBLE.—This seems to be, indeed, a fighting time generally. Even the stock speculators down in Wall street, and the grain and flour speculators at the Corn Exchange, have had their beautiful "set-to" the past week. The stock brokers tease each other by dropping pennies down each other's backs on 'Change, and the provision men throw bits of dough, in the flour market, at each other's heads. This kind of fun, at last, degenerated into fisticuffs, and they went at it *a la* Heenan and King. The feuds broke out two or three times, but the Board finally interfered, and peace was restored. I only wonder, seeing the wide license for humor allowed at these 'Changes, that more of these disorders do not occur. I know one broker who never leaves the Board without shaking out at least a dozen nickels that have been slyly dropped down the neck of his coat to provoke him. Throwing dough is much worse, I think.—*Satanella's Letter from New York to Morning Call.*

So it seems this is not the only place where pugilistic science is brought to bear in occasionally settling disputes relative to stocks, etc. We were under the impression, until now, that this was the only locality where knock-down arguments were so frequently used; but we must frankly "acknowledge the corn," and say we are far more satisfied with the conduct of our brokers after reading the above disgraceful actions.

TUCKER AND GARRISON DIFFICULTY.—The case of W. R. Garrison *vs.* John W. Tucker, wherein the latter gentleman is charged with forwarding to this city numerous false dispatches, came up in Judge Shepheard's Court on the 10th inst.; but, upon application of the prosecution, it was continued. We noticed Mr. Tucker in Court, as "hold as a lion," and with a determination, as he said, of seeing the matter through. His witnesses were ready for action, and "eager for the fray;" but the continuance was granted in conformity to a rule with the Court, that either party can secure a continuance upon the first calling of any case. This case is looked forward to with much interest by the public.

A GOOD REPLY.—The Trustees of the Real del Monte took the responsibility upon themselves to levy an assessment of $20 per share, without condescending to consult the wishes of the stockholder's committee. Mr. Robbins, learning of the fact, got out an injunction against the assessment. The next day he was sent after, when some of the Trustees asked him to withdraw the injunction and have arbitrators appointed. His reply was, "No! gentlemen, never; my arbitrator is the Supreme Court, and the attorney Mr. McAllister, to whom I most respectfully refer you in behalf of the stockholders."

SANTA ROSA G. & S. M. CO., VIRGINIA.—Another very encouraging letter has been received by the Trustees of this company, from their new Superintendent, Mr. Cummings Cherry. He also forwarded several different grades of the ore which he is now taking out of the mine. The stock has been quite active in the market during the week, and continues to advance gradually. Holders of the stock seem to be very sanguine as to their prospects, and we should not be surprised to see it touch high rates in market value, if the reports we hear concerning it are correct.

DEMAND FOR "FEET."—A suit has been commenced by a Mr. R. West against the Trustees of the Ophir of the Colorado Mining Company. He desired to force them to issue him certificates of their stock, which he avers belongs to him, as he is one of the original locators, and is entitled to two hundred feet of the said claim. They having refused to do so, he thus asks for his rights in the matter.

IMPROVEMENT.—The Pacific Board of Brokers intend at once to enlarge their present beautiful board room to double its size. When completed, this will be one of the finest board-rooms in the city. They have progressed wonderfully lately, and we would advise our friends of the First Board to look well to their laurels, or else they might get beaten on the "home-stretch" yet.

THE REAL DEL MONTE MEETING.—The meeting of this company was held at Blumenburg's hall, Pine street, last Saturday evening, March 5th, and, as nearly as we could estimate, there were two hundred and fifty stockholders present. R. E. Brewster, President of the company, took the chair, called the meeting to order, and stated that the object of the meeting was to inform the stockholders respecting the condition of the mine. A report from Mr. Attwood was then read (this gentleman having been employed by the president to examine the mine) he says that the present working does not show very favorable in one or two of the shafts, but by working the several shafts or ledges in a proper manner, he had *no fears for the final result*. He entertained hopes of the Real del Monte mine proving a good paying investment, as it had now an able superintendent. The secretary then read a letter dated February 20, from the superintendent, which spoke flatteringly of the indications but gave no specific information. It also mentioned the destruction of the engine belonging to the company's mill and recommended the purchase of a new horizontal engine to replace it, which would be better for the purpose, and at a cost of $6,000 could be got to work in from forty to sixty days from the time of purchase in this city.

The financial report was then read from which the following items were gathered: The total assessments paid on the stock of the company was $101,-133.39. The total bullion taken out of the mine up to date was $519,023.95 from which the freight to this city, discount on bars, and cost of crushing being deducted left a balance of $317,000. The whole indebtedness of the company at the time was $270,-748.98. A list of the claims which had been purchased by the company after long litigation was read, by which it seems that the adverse title to ground claimed by the company cost $278,692.65 while the cost of law suits and expenses incurred prior to purchasing footed up to $98,225.42.

The president next read a despatch which he had received from the superintendent of the mine that day, which stated that the ore both in the upper and lower levels worked was improving greatly in value, after which the stockholders called an informal meeting, and elected Judge Heydenfeldt as chairman, to receive the report of the committee appointed at a meeting held about a week ago. The report was read by Mr. J. J. Robbins, showing an abstract from the books of the affairs of the company, substantially the same as the report of the secretary, with the exception of pointing out several amounts of the liabilities which, in the judgment of the committee, were illegally contracted by the trustees. The report of the committee was not very flattering. The committee also recommended that a rigid investigation be had as to the causes of those expenditures, and such steps as will hold their agents to strict accountability. After some questions put to several of the trustees, explanatory of the nature of several transactions, a motion that power be conferred upon the present committee to investigate the affairs of the company fully, as also to consult with the trustees in adjusting conflicting claims outstanding now, and report to the stockholders whether to compromise or litigate the same, was adopted.

The meeting adjourned at ten and a half o'clock to meet again at some future day at the direction of their president. The general impression of the stockholders seemed favorable as to the value of the mine, and the conclusion appeared to be that it would be redeemed from its present unfortunate position. There appeared to be but one opinion as to the scandalous manner in which the affairs of the company have been conducted.

PERSONAL.—Mr. Merriam left here last week for Owen's River, having been sent there by a company of capitalists of this city to locate different mining claims. While away, he intends looking after the interests of several leading mines, among them we learn is the East Lynne, a very promising mine. We wish him a pleasant trip.

GOOD-BYE.—Mr. John S. Henning, Superintendent of the North American mine, who has been in town for some days past, enjoying the good things of this life, intends taking his departure for the mine on the 14th inst. Good-bye, ye lucky youth!

[Written for the Mining and Scientific Press.]

REESE RIVER.

A guide to the Reese River and Humboldt silver mines, by Harrison Wheelock, has just been published by Towne & Bacon. In the map accompanying the work, the Reese River region is shown by districts, the Humboldt region at large, and the Big Creek Cañon in detail. Twenty-six pages out of twenty-nine are devoted to the Reese and Humboldt regions, and dedicated to the former; the appendix containing metallurgical tests, forms for incorporating claims, table of distances, and information of a general character.

The author advises the reader, if he goes at all, to go on horseback—that is purchase himself a plug, for $40@75, at Sacramento, Carson City or Virginia, array himself in homely apparel, hang a bag of lunch, a six-shooter and a canteen on the horn of the saddle, and tie carefully behind the same two pairs of substantial California blankets. You may then establish your headquarters in the saddle, and wheel off. As a recollection of the desert strikes us, we may add that, on the whole, your horse had better be a mare.

The principal towns at the present time are Clifton and Austin, in the Austin Cañon. They are about to be, if they are not already, incorporated into the city of Austin. The villages of Jacobsville and Yankee Blade are also situated in the Reese River district; the former being noted for its mills, and the latter for the mines in its immediate vicinity. It is claimed by some of the owners of ledges here that they unite the two formations, slate and granite, having the latter as a foot-wall and the former as a hanging-wall. This is a very favorable criterion of their durability. Austin Hill, on the contrary, presents a thousand examples of streaks of decomposed quartz, termed ledges, located in granite alone. Do they remain permanent, or do they "run out?" Ask the Post-Hole, Belle Shields, *et id omne genus*. Out of the twenty-five hundred claims located in Reese River District, we boldly venture the assertion that one year hence there will not be fifty worked. If ledges cased in granite are permanent, all science is at fault, and we must begin anew. There are several quartz mills in the towns of Austin and Clifton, which have been running at intervals only.

The Amador District was formed in November last. There are quite a number of claims therein that promise well. The Amador and Wildwood Tunnel Companies are running parallel to each other, and engaged, night and day, working three shifts of hands. Several promising ledges have been found by them. This district is directly north of the Reese River District.

Mount Hope District is next north of Amador, and south of Mount Vernon District. Although but slightly prospected as yet, they promise to contribute to the general richness of the country.

Big Creek District contains Big Creek Cañon, in which are laid out Lander City, Cañon City, Watertown, Middletown and Montrose. These embryo cities must eventually be merged into a large town, occupying the whole cañon. This cañon will not suffer by comparison with Austin Cañon, possessing, as it does, a 250-inch stream of pure water. It is the natural centre of the mines already discovered, and will have a brilliant future. A toll-road is now being made over the divide formed by the Toyabee mountains to Santa Fè and Summit Districts. Big Cañon lies about 12 miles southeast of Austin, and contains six quartz mills, which will all be shortly in operation. The town of Washington, in Washington District, is 22 miles southeast of Big Creek. In the vicinity are a number of claims that promise well, if we may judge by the work from them. Very little work has yet been done in this district.

Simpson's Park District lies between Reese River and Big Creek. We here find the slate and granite formation, and the ledges are consequently larger and much better defined.

Smoky District lies east of a portion of Simpson's Park and Big Creek Districts, the Toyabee range intervening. The ledges in this and Santa Fè District are of mammoth size when compared with the other districts in the Reese River region. The casings are also of the most favorable character. The greatest drawback we know of is the meager supply of timber. Two hundred feet in a ledge here sold a few weeks since for $10,000.

Santa Fè District, which lies south of Smoky District, has claims very similar in size and casings to those of Smoky. In these districts alone there is sufficient silver to build a city of solid silver bricks. The Maryland and Loyal ledge are given by Mr. Wheelock as district locations. They are one and the same. The mistake has probably arisen from the fact that before this favorite claim was incorporated it was known by the latter name. Geneva is the name of the principal settlement in Smoky District. It is likely to become a place of some importance, as two quartz mills are about to be erected there. Guadalajara, sixteen miles south of Geneva, in the Santa Fè District, is laid out for a city, which it is never likely to become, there being a much better location at the mouth of Big Smoky creek, four miles below. The most direct route for teams for this place will be by Big creek, so soon as the toll-road is completed over the divide. At present, they go by Austin and Smoky District.

Summit District is the next district south of Santa Fè. It possesses an abundance of good water and timber, and the mineral wealth contained within its borders must eventually make it favorably known. The want of good roads to mills is its greatest drawback.

Smoky Chimney and La Plata Districts lie south of Summit. At present, we can only say of them that they possess some favorable indications.

Marysville District is south of Washington, and the most southern district of the Toyabee range. But little is yet known of the relative merits of this when compared with other districts.

San Antonio District was discovered and formed last November. It is 130 miles southeast of Austin. The richness of this locality has been greatly exaggerated. Water and timber are wanting, and the ledges will not compare, either in size or richness, with those of Santa Fè or Smoky. Silver-bearing rock exists there, however, and a number of claims have been located.

What has been said of the San Antonio may be said of the Cortez District, which is about 70 miles south of Austin.

Union District, in the Shoshone range, about 60 miles southwest of Austin, contains very favorable indications.

Ravenswood and Augusta Districts, on the west side of Reese Valley, are known to contain a number of good ledges.

Mr. Wheelock's pamphlet contains the names of the most prominent ledges in the different districts, and, so far as we know, he is generally correct. We must, however, differ with him as to the comparative wealth of some of the districts. ***

Mechanics and Engineers will find a large portion of our paper devoted to their especial benefit. All important implements in machinery, and inventions of general interest wherever made, will be found carefully noted in our columns, and whenever the facts are attainable, they will be fully described and often illustrated. Quartz mining and mechanics are so intimately connected, that a paper especially devoted to the former interest cannot well fulfil its office without paying a large share of attention to the latter. We trust therefore that the mechanic as well as the miner, will take an interest in the success of the Mining and Scientific Press. We desire to make our journal a vehicle of intercommunication between mechanics as well as miners; and to that end have devoted so important a space in our columns to mechanical interests. We invite contributions to that department. Let the miner and mechanic go hand in hand, for by so doing both will be materially benefitted.

The Daily American Flag.—Mr. D. O. McCarthy, editor and proprietor, announces the first appearance of the above named journal, in this city, on the first Monday in April next.

Phœnix Insurance Company.—This solid old company have announced their pleasure to comply with the new law, requiring a heavy deposit in bonds in this State.

The Lower Coast Range.—Encouraging reports continue to reach us from the mines along the lower Coast Range. The development of the copper lands in the lower portion of Monterey county, according to the *Gazette*, are "cheering." That paper thinks that Monterey will soon become an important copper-shipping port.

The Red Bluff *Independent* is informed that "the whole country, for twenty-five and thirty miles west of Red Bluff, is alive with people prospecting. Some ledges have been discovered a few miles from Nome Lackee Reservation. In a short time we may expect the farmers to be hauling their rock instead of their grain to the Red Bluff steamboats."

A correspondent of the Stockton *Independent* writes from Murphy's that quite an excitement was created in that place, recently, in consequence of rich developments made in the "Noble Copper Mining" claim, situated on San Domingo creek, about three miles from the town of Murphy's. This development promises to open up a new copper region, and, judging from what is said about claims in that locality, copper stock will be very valuable.

The Nevada *Transcript* says they have commenced operations again on the famous Well Lead, near the Zinc House, and are driving ahead, in taking out ore, very rapidly. The *Transcript* further understands that the Pocahontas Company, located at the lower part of Nevada county, struck some rich copper ore, in their claim, one day last week. A great many companies in the copper regions are making extensive preparations to go to work in earnest.

The Plumas county *Union* says of one of the principal copper mines in that county that some six or seven tons of the ore were sent to Swansea, England, for reduction, and the ore payed 57 per cent. in copper, and silver at the rate of $140 to the ton. This ledge on the outcrop is ten or 12 feet wide, and the ore taken was of course the best of the lot blasted out, but the mass of the rock will pay at least 35 per cent. If Plumas has much of such ore as that, she will do well.

The Sonoma *Democrat* says:—"Reports reach us of the most flattering nature of the mining prospects in the upper end of this county. The Blue Buck company on Dry Creek, the Olive company on Russian River, and the Willow Springs company in the same locality, have all at last found the diligently sought for ledges, and the prospects promise a rich harvest to the shareholders. Several gentlemen from San Francisco have visited the mines this week with a view to making investments."

Send them East.—Do you buy papers to send to your friends at the East? If so, please reflect that no other paper published in the State can be more acceptable to the majority of your friends than the Mining and Scientific Press. It contains a very large amount of valuable reading, nearly all relating to California and her leading interests—just the kind of general information you would give your friends if you should write. It can be had at the office of publication, neatly done up in wrappers, for mailing, at one bit per copy.

Caution.—Parties incorporating mining companies, who desire the choice of advertising in either a daily or weekly newspaper, should be particular to cross out the word "daily" when using the form of blank by-laws printed and sold by the stationers of this city. Many stockholders have been surprised to find an imperative provision in their by-laws for advertising all notices in "some *daily* newspaper," and have consequently amended them.

New Machinery.—The Hale & Norcross Mining Company are having built, at the Pacific Iron Works, of this city, a fine 10-inch 100-horse-power engine, a hoisting engine of 50-horse-power, two boilers, gearing, etc. The work is under the superintendence of Capt. Phillips, the engineer of the mine.

Freight.—Immense quantities of freight has been shipped during the past week for the Idaho mines. Vessels taking freight for that destination have been actually overrun, and there is room enough left to fill several more as soon as they are ready to take freight.

Mechanical Department.

Railroad Switches, Signals, Etc.

In a late issue, we noticed a French invention for switching trains of cars from one track to another, which was automatic in action, being operated by rods attached to the locomotive, or the leading vehicle on the train, whatever it may be. We have now before us an illustrated description of an improved switch, in the *Scientific American*, for which much superiority is claimed. The mechanical arrangement of this switch consists in a stationary lantern, set with different colored glasses, and so attached to the switch that whenever it is moved a cog-wheel attachment brings to the view of the approaching train a color known, by previous understanding, to correspond to a certain track. H. H. Barnes, of Mexico, N. Y., is the patentee of this invention.

SOMETHING BETTER STILL—A CALIFORNIA INVENTION.

So many accidents are continually occurring from misplaced railroad switches, defective signals, and the carelessness and inattention of those who have the safety of hundreds of lives in charge, that any improvement in this direction must be looked upon as a matter of the utmost importance. As intimated above, we apprehend that we have at this office the drawings, etc., of a proposed improvement for switching railroad trains, which is altogether superior to either of the above or to anything else now in use. The invention to which we now allude has been made by Messrs. Griffith and McAuley, of this city, and for which preliminary steps have been taken, through the MINING AND SCIENTIFIC PRESS AGENCY, to secure a patent. The invention here alluded to does away entirely with all necessity for either switch or switch-tender. The moveable section of the track is also dispensed with; so that there is no possibility of accident from displacement of switch or carelessness of switch-tender. The apparatus is to be attached to the car or locomotive. It is very simple, as all our best inventions are, in its construction and operations; and is at all times under perfect and instantaneous control by the engineer or brakeman. It also assists in turning curves in the road. With one of these attachments to a car, we do not see how one of those frightful accidents could have happened such as lately occurred on a Missouri railroad, from the breaking of a rail on a portion of the curved track, in consequence of which the train was precipitated down a steep embankment. With the use of this arrangement it is almost impossible for a train to be thrown off while on a curve, or to press so heavily against the outer rail as to break it, even when full of frost, as in the case above alluded to. The chief object of its application to a curve is to prevent friction; by its aid the passage over such portions of a road is made almost as easily as along a straight line. The apparatus is designed for horse-cars upon street-railroads, as well as for steam cars, and requires nothing more than the application of the driver's foot to turn the car to the right or left, from one track to the other. This invention is well worth the attention of railroad men everywhere. Its cost is less than that of an ordinary switch.

THE WATEREE.—This war vessel is described by the Washington correspondent of the *Daily Journal* as a fast steamer, armed with ten guns—four of them nine inch, two rifled guns of 200 pounds each, and two twenty pound guns, with two howitzers of twenty pounds each. A mate to the Wateree, now building, and which will be ready to sail in six weeks, is also to go to California. In addition to this, the Navy department will contract with the loyal Californians to build in California three or four iron clads of the Monitor class—all the material, so far as possible, to be produced and manufactured in that State. The object of this is to establish on that distant coast the facilities for the creation of such vessels as the National exigencies may require. Mighty as is our struggle to maintain the unity and integrity of the Government on its own soil, those charged with its administration are evidently preparing for the dominion of the seas."

[Written for the Mining and Scientific Press.]

Steam and Electro-Magnetic Power.

EDITOR PRESS:—The article in No. 9 of the PRESS, headed "Improvement in Generating Steam," is an undoubted wild-cat emanation from Washoe. Wonder if an incorporation is intended? The idea that through any possible new contrivance a hundred per cent. more steam can be generated by an equal amount of fuel, is, in the face of the present perfection in boilers, simply absurd. Steam is water, and its impregnating air combined with heat, and thereby expanded; the same equivalent quantities being ever required for the same conditions of expansion. The like amounts of fuel, whether flashing with flame or slowly glowing, can only give forth the same fixed quantities of heat. No alteration of the surface of a given weight of water exposed to the effects of the same fire, can endow it as a whole with a greater amount of heat. The result of increasing the surface of exposure in boilers will be to multiply the energy of action, always provided that there is a proportionate increase in the consumption of fuel. It is merely in relation to the *time* of generating the same quantity of steam of equal pressure that any particular improvement can be made in boilers. No one, clearly understanding the subject, will believe that of the intense heat given off by a furnace fire more than a fractional part escapes combination with the water surrounding the flues of the boiler, and that small waste would seem to be inseparable from the necessities of draft.

Reference to steam and heat very naturally leads to the notice of another article in the same number of the PRESS, entitled, "A New Electro-Magnetic Engine." Scientific enquiries have led to the belief that heat is substantially motion, of which light, electricity and magnetism are the prime exciters in nature. Heat creates motion, and motion creates heat, and the one does not exist without the other. They are, therefore, though mutually convertible, unchanged in their relations to each other, whether discharged from decomposing fuel or chemicals, or excited by mechanical friction or force; and the amount that one body acquires some other must yield. The power or current giving movement to an electro-magnetic machine, when excited beyond a certain limit, becomes converted into an opposite current of magnetic induction, increasing in intensity with the speed, and finally arresting further motions. Demanding, as it does, the consumption of materials nearly similar to those to be put in motion, such as zinc and iron and powerful acids, the electro-magnetic power must ever be from ten to thirty times more expensive than that produced by coal or wood, I am at a loss to understand what is meant in the article by an "increase of surface," which is claimed to extend the power of the electricity at a diminished ratio of expense. I am aware of no electrical law applicable to this clouded statement. The same laws regulating the power and surface relations of heat and steam and that of electricity; and magnetism in itself seems to be but an active law curbing the natural electrical current of bodies, and causing them to move in circles of limited power and extent. Electro-magnetic force is always in exact ratio to the amount of zinc or other materials consumed in the battery; and it is necessary to decompose metals to produce that high energy capable of affecting movement at all. The Washoe and New York inventions seem to be of near kin to each other—both claim to apply the same fallacious principle to different forms of power, and both are equally founded upon ignorance of known physical laws.

Power or motion is one of the stored elements of nature. The question arises, what is the cheapest mode of unshackling the imprisoned power? Certainly, by creating varied relations of matter. The Creator has stored in the coal beds and vegetable forms, carbon, etc.,—the tools whereby heat may be unlocked from the oxygen of the atmosphere in the combustive process of forming carbonic acid. These elements are feeble in their antagonistic relations, and, therefore, more effective in their results. They but set free that tithe of power not needed in the new compound, yet engender great results by their energy of action. We strike but a spark, and a barrier falls, that only a much greater power can restore. There is no such near relationship in common electrical results; with electricity, vigorous powers only can separate and keep up action, and the effects are not commensurate with those powers. There is a straining beyond the mild operations of nature. In steam power, another superior element of gentle action, water, is used to absorb, and by its expansion accumulate pure heat for energetic effects. While the primary setting free of heat is a chemical operation, that of accommodating it with room is a mechanical one, and has no great restraining power in the sudden discharge of that heat, as has the magnetism of a body against its containing charge of electricity. Unless three materials can be found bearing the same analogous relations to electricity that heat does to oxygen, carbon and water, there can be no similar economy, or power, of results. Such a discovery I deem as impossible as perpetual motion.

E. A. M.

SACRAMENTO, Cal.

We give the above communication as received, not to endorse it, but to open a matter for discussion, should any of our correspondents see fit to take it up.

STEEL BOILERS.—Some very practical, thorough and interesting experiments have been made in Prussia with steel boilers, an account of which has been published in *Dingler's Polytechnic Journal*. A steel boiler of the egg end shape, 4 feet in diameter and 30 feet in length, without flues, was tried. It had a steam drum 2 feet in diameter and 2 feet in hight, and the plates were one-fourth of an inch in thickness. Beside it there was placed another boiler, similar in every respect, excepting that the plates were of iron 0.414 of an inch in thickness. The steel boiler was tested by hydraulic pressure up to 195 pounds on the inch, without showing leakage, and both the iron and steel boilers were worked under a pressure of 65 pounds on the inch for about one year and a half. During this period the steel boiler generated 25 per cent. more steam than the iron one, and when they were thoroughly examined after 18 months practical working, there was less scale in the steel than in the iron boiler. The former evaporates 11.66 cubic feet of water per hour; the iron boiler 9.37 cubic feet. The quantity of coal consumed was on an average 2,706 pounds for the steel one in 12 hours, and 2,972 pounds for the iron boiler. The plates of the steel boiler over the fire were found to be uninjured, while those of the iron one were about worn out. In Prussia, several worn-out plates of iron boilers have lately been replaced with steel, which, it is stated, lasts four times as long. As steel is twice as strong as iron, thinner plates of the former may be employed for boilers, and more perfect riveting can be secured. A greater quantity of steam can also be generated in the steel boiler on account of its thin plates, and thus much fuel may be economized. Such steam boilers should engage the attention of all who make and use steam boilers for engineering and manufacturing purposes.

A REMARKABLE instance of the destructive energy of pure steam as an expansive agent is related in the report for September last, of Mr. Fletcher, the chief engineer of the Manchester (England) Association, for the prevention of steam boiler explosions. A large hay-stack boiler, intended for a chemical establishment, was being tested with steam, at fifty lbs. pressure on the inch, not produced from water in the boiler and heated by a furnace underneath, but supplied by a pipe from another boiler. The boiler to be tested was laid upon its side, and six men were engaged upon it caulking its seams, when it exploded, the bottom being blown out entire and thrown upon the roof of an adjacent building at a distance of thirteen yards; and four of the men engaged upon it were thrown to a distance of forty yards, upon the roof of another building, one of them being instantly killed. We have never heard of another such explosion. In this case the pressure of steam was but fifty pounds on the square inch, and no extra heat or pressure could be supplied; yet a great boiler, the plates of which were from seven-sixteenths to half an inch in thickness throughout, was torn in pieces, and some of the parts weighing several hundred pounds, thrown to a considerable distance. The boiler was eleven feet in hight, eight feet nine inches in breadth at the base, and seven feet nine inches at the waist. When it is taken into consideration that at fifty pounds pressure on the inch, this amounts to 7,200 pounds on the square foot, some idea may be formed of the great amount of force that was confined in that boiler.

No especial cause is assigned for this singular explosion. May it not have been produced by the vibration caused by the hammering of the "caulkers" upon the sides of the boiler while under extreme tension? Might there not have been a change commenced in the texture of the iron, from fibrous to crystaline, by the "hammering," thereby weakening it to such a degree as to allow of the sudden disruption as described? Cannot some of our readers give us their ideas upon the above suggestions?

MORE SHELLS were discharged in the single battle of Gettysburg than were employed in all the battles that Napoleon ever fought.

Patent Department.

Improvement on the Arastra.—Mr. G. A. Lloyd has called our attention to an improvement in the process of reducing quartz sands, which he is about to put into practical operation at the European Ore Reduction Works in this city. Mr. L. ignores the "pan," altogether, and goes back to first principles—the *arastra*. He claims that from long practical experience in the use of pans he has become satisfied that stone surfaces are much preferable to iron for grinding quartz sands. He builds a substantial arastra, lines the inner sides with copper plates, as well as the sides of the drags or mullers, employs two circles of drag stones, which are carried around in opposite directions, and by which the pulp is thoroughly mixed, while it is being pulverized. Each muller is also made to revolve on its own axis when desired. The great drawback to the arastra arises from the tardiness with which it has hitherto done its work. This slow motion has heretofore been a necessity from its peculiarity of operation. By the compound motion above described, it may be run as rapidly as an ordinary pan. One great advantage of this machine grows out of its cheapness and simplicity. A small amount of gearing, a double set of arms and one or two pullies, is all that is required from the foundry. The balance of the machine may be readily procured at almost any mining locality. Mr. L. has applied for a patent.

New Amalgamator.—We witnessed the operation of an amalgamator at the Vulcan foundry, a few days since, constructed upon a principle quite novel in its application to grinding quartz sands. The sand is received quite coarse—as coarse as peas, and coarser still if desired—into a hopper from which it passes through a perpendicular shaped grinder, with corrugated grinding surfaces set at an angle so as to produce a gradual reduction of the particles of quartz as they descend. From between these surfaces the sand is passed into the bottom of the pan, where it is triturated between dies and mullers after the ordinary method of the pan process. The inventor of this pan is Mr. Albert Moore of this city. Applications for a patent have been made through the Mining and Scientific Press Patent Agency.

A Faucet Measure and Indicator has been patented by V. Squaza, of this city, which consists of an application to a faucet of a gauge tube provided with a double scale to indicate both the quantity of fluid remaining in the vessel as well as the quantity drawn therefrom.

"J. A. W.," Virginia City.—Your mechanical problem has been received. It is impracticable. Take a rope, say 50 feet in length, attach a weight of ten pounds to the centre; elevate the two ends, upon pulleys, to an angle of say forty-five degrees—the centre, with the weight, resting on the ground. You will readily see the large amount of power required to straighten the rope. Your levers are but another form of the same mechanical principle. This is one of those problems which come under the head of "parallelogram of forces," and is apt to mislead the inexperienced at first sight.

Science and Philosophy.—Science seeks to determine facts, to develop principles, to discover laws. Philosophy strives to obtain generalities from these discovered fragments, and to ascend from matter and its properties to the influences which affect them, and enquires into the superior and unseen powers which are constantly at work around us.

Different Colored Flames are due to the difference in the forms of the particles or atoms undergoing combustion; these atoms, during combustion, will reflect the peculiar colors, due to their forms, like the prism.

Knighthood is the reward Capt. Speke is to have for discovering the source of the Nile.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. D. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months in advance,..... 3 00

☞ For sale by Carriers and Newsdealers. ☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Will be Discontinued.—After this date subscriptions not paid for in advance will be discontinued. As soon as possible bills will be presented for all arrearages. Parties who receive a paper from the office of delivery cannot evade the LAW requiring payment for the same. We shall in future keep no continued accounts with subscribers, and the subscriptions of ALL friends and patrons will be treated alike.

San Francisco:
Saturday Morning, March 12, 1864.

EARTHQUAKES.

Earthquakes are a complex phenomenon, referable to a diversity of causes. Their occurrence in a given region may no doubt be attributed to a special, local cause, entirely differing from the cause which may produce similar effects in another region. Again, various causes may act conjointly, or under various mutual modifications. The phenomena of earthquakes have been made a matter of much investigation, and long continued and close observation. Great numbers of facts have been carefully noted, and well established. No single theory has yet been proposed which will account for all, or even the half of the facts established. When subjected to rigid investigation, all the theories yet enunciated are found to fail, at times; generally in a majority of cases, always in a large proportion. Some idea may be formed of the amount of attention which has been devoted to this class of investigation from the fact that one important theory has been based upon the observation of more than *six thousand* days of earthquakes!

Modern appliances and facilities are opening great opportunities for observation in this direction as, indeed, in almost every other department of scientific research. For instance, the Government Coast Survey has had, and probably now has self-registering tide gauges at this port (San Francisco.) San Diego and at the mouth of the Columbia river, which record the rise and fall and time of tide at those several points upon a continuous sheet of paper, moved forward regularly by clock work. It was by this instrument that we were enabled, to announce upon this coast, the probable occurrence, in a distant quarter, of a great earthquake, weeks, if not months before it was made known, by due course of mail. It will be recollected by most of our readers that in December, 1854, Simoda, in Japan, was visited by a terrible earthquake, which completely emptied that harbor of its water, and left even ships of war upon dry land, which but a moment before had been proudly riding at anchor. Of course such a disturbance created an immense wave, which swept over the greater part of the Pacific ocean. It was felt in this harbor in just twelve hours and sixteen minutes from the time the shock spent its force in the harbor of Simoda. The clock work register, above alluded to, promptly and faithfully recorded its appearance, and told our citizens, one bright calm day, that a series of earthquake waves had visited us, recording their maximum hight as seven-tenths of a foot. That wave had traveled 4,800 miles and occupied half an hour in rising and falling. It was followed by several smaller ones, in quick succession. A similar record was made at San Diego.

The great earthquake at Lisbon sent a wave quite across the Atlantic ocean. It was felt along the coast line of America from South Carolina on the south, to about the middle of the Labrador coast, on the north.

The gradually increasing extent of telegraphic communication, is greatly facilitating observations with regard to the time, extent and velocity of these waves, all of which data are of much importance in investigating the producing causes of these wonderful phenomena of nature.

Earthquake waves are not confined to the water. They are also developed upon land, and what may appear somewhat strange to the uninitiated, they move far more rapidly through that element than through water. An earthquake wave travels through water at the rate of about seven miles a minute; through earth at the rate of from fifteen to fifty or eighty. Its rate in water is nearly uniform from the fact that that element is quite homogeneous; while in passing through land or earth the advancing wave is oftentimes retarded by having to traverse various descriptions and strata of ground, often encountering caverns, fisures and seams which greatly retard its velocity. The more dense and homogeneous the body the more uniform the transmission of the wave.

Numerous and well attested observations prove beyond a doubt, that the undulating motion felt during an earthquake is *a "wave,"* and quite similar in character to an ocean wave. We will instance several observations which are well authenticated, and which have been employed, in the way of illustration by Sir John Hershel. We quote:—

"The way, then, that we may conceive an earthquake to travel, is this:—I shall take the case which is most common, when the motion of the ground to and fro is horizontal. *How far* each particular spot on the surface of the ground is actually pushed from its place there is no way of ascertaining, since all the surrounding objects receive the same impulse almost at the same instant of time, but there are many indications that it is often *several yards.* In the earthquake of Cutch, trees were seen to flog the ground with their branches, which proves that their stems must have been jerked suddenly away for some considerable distance and suddenly pushed back; and the same conclusion follows from the sudden rise of the water of lakes on the side where the shock reaches them, and its fall on the opposite side; the bed of the lake has been jerked away for a certain distance from under the water and pulled back. Now suppose a row of sixty persons, standing a mile apart from each other, in a straight line, in the direction in which the shock travels, at a rate we will suppose, of sixty miles per minute, and let the ground below the first get a sudden and violent shove, carrying it a yard in the direction of the next. Since this shock will not reach the next till after the lapse of one second of time, it is clear that the space between the two will be shortened by a yard, and the ground—that is to say, not the mere loose soil on the surface. but the whole mass of solid rock below down to an unknown depth—compressed, or driven into a smaller space. It is this compression that carries the shock forward. The elastic force of the rocky matter, like a coiled spring, acts both ways; it drives back the first man to his old place, and shoves the second a yard nearer to the third, and so on. Instead of men place a row of small buildings, or columns, and they will tumble down in succession, the base flying forwards, and leaving the tops behind to drop on the soil on the side from which the shock came. This is just what was seen to happen in Messina in the great Calabrian earthquake. As the shock ran along, the houses on the Faro were seen to topple down in succession, beginning at one end and running on to the other, as if a succession of mines had been sprung. In the earthquake of Cutch, a sentinel standing at one end of a long straight line of wall, saw the wall bow forward and recover itself, not all at once, but with a swell like a wave running all along it with rapidity. In this case it is evident that the earthquake wave must have had its front oblique to the direction of the wall."

The earthquakes to which we have more particularly alluded were doubtless produced by deep seated disturbances, most likely originating in the high temperature of the far interior of the earth. We so judge mainly from their great severity and wide spread effects, the shocks traversing through and beneath extensive mountain ranges and across wide oceans. A large majority of the earthquakes recorded are of a milder type, some of which may doubtless be attributed to the same causes as above noted, but variously and more geutly developed; while many, most likely, have their seat of disturbance nearer the surface, and are caused by sudden chemical changes, occurring within the solid crust of the globe, without any connection with internal fires. This leads us to speak more particularly, but briefly, of

CALIFORNIA EARTHQUAKES.

There are many reasons for believing that the earthquakes which are of such frequent occurrence throughout the valleys and Coast Range of California are produced by the minor agencies alluded to. A noticeable fact connected with California earthquakes is, that those felt on the coast and in the valleys seldom if ever extend to the Sierra Nevada Range. Among all the shocks which have been experienced in San Francisco since the advent of the gold seekers, we have no recollection that any one of them has been seriously felt beyond the lower foot hills; and *vice versa.* The earthquake which was so sensibly and extensively felt throughout the Sierra Nevada, and upon both its flanks, in the summer of 1860 (we believe we are correct in the date) was but barely perceived, if at all, in Sacramento, and not at all west of that city. These circumstances go far towards establishing the theory, we have suggested, with regard to the seat of earthquake disturbances in the valley portions of the State, and to disprove the idea that they are consequent upon the internal fires which are supposed to have a permanent existence but a few miles below the earth's surface.

We do not recollect having seen any recorded observations, or speculations even, upon the fact, but we have been led to conclude, from the general directions which California earthquake waves appear to take, (from N. W. to S. E.) and from the limited spread of the waves in an east and west direction, that the strata connected with the Sierra Nevada range of mountains entirely underlies, not only the Sacramento and San Joaquin valleys, but probably the Coast Range also. If such be the fact it would follow as a matter of course, that any disturbance of the strata *above* this underlie would have very little tendency to effect the Sierra Nevada mountains. It is a well known fact that a certain class of earthquakes throw out their waves, in concentric circles, without any reference to the direction of opposing mountain chains, passing freely across and through them, while others move longitudinally along extensive valleys, or along the direction of mountain ranges. The seat of disturbance in the latter class is evidently near the surface, and it is to that class that our California earthquakes undoubtedly belong.

We apprehend there can be very little doubt but that the dip of the Sierra Nevada completely underlies the seat of earthquake disturbance in the Sacramento valley and Coast Range region; hence we have but little reason to fear any very serious disturbance, such as would endanger the stability of buildings, etc., which have been erected with due regard for ordinary contingences. If this hypothesis can be sustained it will afford a vast amount of relief to the more sensitive portion of our population, both in the city and at the mines.

Notwithstanding the apprehensions that have been felt in many quarters that we may yet be visited with a destructive earthquake, we believe there is

no tradition whatever, among the Indians, that such an occurrence ever took place. And we have the evidence of the existence of "rocking stones" in various parts of the Sierra Nevada mountains, which must have required the slow wearing of the elements for thousands of years, to have brought them to their present condition. Many of these stones would topple over under the shock of an earthquake wave which would scarcely effect any ordinary structure of human hands.

MINING SHARE MARKET.

The Mining Share Market has been very much depressed during the past week. With a few important exceptions, stocks have generally declined. The total transactions of the week foot up at $951,491 75.

Ophir found purchasers early in the week at $1,650, and sold on Friday at $1,618 exclusive of dividend of $48 per foot, which was declared on the 7th inst.

Gould & Curry still remains inactive; it found a seller on Friday at $4 630, at which figure it was again offered yesterday without buyers.

Chollar is inactive at a small decline. We note sales of 24 shares from $390@400, buyer 30 days. Nothing further is said of the reported improvement of the ore in the 3d gallery.

Daney has met with an important decline. On Saturday last it touched $225; opened on Monday at $195, reached $205 on Tuesday and suddenly dropped to $160 at last evening's board; 205 feet have changed hands during the week.

North American has not been so much enquired after. It has found purchasers during the week at from $100@109, closing at $105 firm.

Lady Bryan still continues in large demand, ranging from $45@56 at and between which figures 2,107 shares have changed hands since our last issue. It closed at last evening's board at $49.

Burning Moscow has maintained about its last week's figures, meeting with quite a large business. Sales of 154 shares were made yesterday at from $98 to 112—closing at 100.

Nevada (Justice Ground) still continues to improve. Being held firmly during the first days of the week at last quotations; bidders suddenly advanced their figures yesterday from $225 to 235 and 240; the closing sales were made at the latter figure.

Lafayette has been less enquired for, and has found sellers at an important decline, closing at from $14 to 16.

Uncle Sam has been in more demand but at a reduced figure. Its highest figure the past week has been $805; it may be quoted firm at 800.

Yellow Jacket is more in favor at a material advance. It has found buyers at $1,050, closing firm at 1,010. New and important improvements are being made at this mine which, when completed, will greatly facilitate the labor of raising the ore.

Crown Point is again enquired for. This stock has found sellers at from $850@950, closing at the latter figure.

Savage has greatly declined and fails to find buyers at $2,800—a decline of $600 from recent quotations. The closing bids are $2,650. This important decline is attributable to the unfavorable complexion which its suit with the North Potosi has suddenly assumed.

North Potosi, for the above reason, still continues to improve. Closing last week at $71, it has advanced gradually to $94, at which figure it found buyers at last evening's board. Its tendency is still upward.

Empire Mill and Mining Company has found buyers the past week at $1,050@1,025. We last week inadvertently gave additional circulation to the error which found its way into the city papers, that the dividend declared on Monday week was "$40 per foot." It should have read $40 per share. As there are 16 shares to the foot in this claim, the dividend was nearly $640 per foot, instead of $40—a very material difference. There are only 75 feet in this claim.

We quote Imperial at $157½, a slight decline from last week; Pride of the West at $87; Melones has touched $55—may be quoted firm at $50; Norton at $4; Baltimore American at $41; Baltic has found buyers at from $150@160; Blue Ledge at $20; Bullion, (G. H.) $80; Buckeye $21.

Caledonia Tunnel has been largely enquired for, and closed at $25 cash, $27 buyer 30; 345 shares have changed hands.

Santa Rosa is meeting with considerable favor at improved rates, closing at $10, buyer 30.

We quote Crocket at $20; Adriatic at $9; Burnside at $13; Crocket consolidated $14½; Michigan $20; Moss, (Va.) $30; El Dorado $30@42½; Gov. Nye $5@5½.

Justice has found buyers at $230; South America at 21; Baltimore American at 41; Whitman at 65 to 70; Bajazette at 65; Harmon may be quoted at 37½@40; Lucerne at 21; Kniekerbocker firm at 40; Michigan at 25.

Real del Monte has been the chief feature of the week; 2,340 shares having changed hands. Opening at $42 it dropped to the low figure of $34 on Wednesday; closing firm at 50 at yesterday's board, with an upward tendency.

Antelope still keeps up, notwithstanding the unfavorable excitement with regard to Esmeralda stocks. Wide West may be quoted at $20; Esmeralda $8; Silver Hill at $10; Coso at $5½.

Napoleon (copper) may be quoted at $60@69 buyer 30; Josephine at $7½.

Esmeralda.—We quote Sheba $125; De Soto $45; Magna Charta $10; Ben Franklin at $6; S. F. City $7½.

Reese River.—We quote Cicero at $35; East Lynn at $20.

WASHOE STOCK MARKET.

Collated from the Regular Reports of the Virginia Daily Union to Latest Dates.

Considerable business is still being done in mining stock in Virginia City and Gold Hill. Two stock boards are in successful operation at the former place, and a second will soon be established at Gold Hill. Claims in American Flat still continue to form the chief attraction. According to the report of the *Union*, ground in this locality is not altogether arbitrary, as some persons suppose, and the increased firmness with which stocks in that district are held is an evidence of the confidence which holders have of their intrinsic worth. Some outside stocks have also attracted the attention of dealers, but transactions in them were very limited.

THREE STOCK BOARDS IN VIRGINIA CITY.—According to the Virginia papers, mining stock business must be pretty brisk in that city. It appears that the old original "Washoe Stock and Exchange Board" was found quite too contracted. some weeks since, to hold the brokers that sought to avail themselves of its facilities for doing business. Accordingly the surplus material organized themselves into a second board, known as the "People's Board." This board has now in its turn become over-crowded, and another swarm has gone forth and organized the "Territorial Stock and Exchange Board," according to the *Enterprise*, while the *Union* gives us "The Virginia Stock Market" as the title appropriated by the new organization. The meetings of this third board are to be held in the large hall in George F. Jones' building, on B street. Some thirty-five or forty members were present at the organization. Seats in the second board are held at $200.

PROSPECTING FOR COAL.—The Virginia *Union* notices the organization of a coal mining company in that city, for the purpose of prospecting a coal indication, located within about three miles of that city, in a south-eastern direction. The company is now sinking, under the direction of an experienced collier, formerly from England, and more latterly from the Pennyslvania coal mines. The indications, thus far, are pronounced remarkably good. A good mine of coal at so short a distance from Virginia would be a fine thing for the people, and the owners would have no cause to envy even the rich silver vein of the Gould & Curry. The sandstone rock through which they are now working is similar in appearance to that which is found in the coal mines in Pennsylvania.

A SOMEWHAT SINGULAR FACT connected with the waters of Humboldt lake and slough is that the waters of both are much more saline and impure after a high wind than at other times. This is explained in the Virginia City *Union* by the fact that the salt water, being the heaviest, sinks to the bottom, and is stirred up and mixed with the fresher stratum on top when agitated by the wind; the alkaline substances deposited on the shores being at the same time washed off and diffused through the main body of the lake.

LITIGATION IN WASHOE.—The Virginia City *Union*, of March 6th, publishes the District Court Calendar for the term commencing March 7th, from which it appears that the criminal calendar contains 181 cases, the law calendar 256, and the equity calendar 48 cases—in all 485 cases. Of the 304 civil cases, 217 are mining disputes. When we reflect upon this immense mass of litigation, it is little to be wondered at that we have so few dividend-paying mines in Washoe.

THE WEEK'S BULLION.—The weight and value of bullion shipped from Virginia City, during the week ending March 5, amounted to 7,694 pounds, valued at $245,786.77, being a slight increase on the shipment of any week during 1864.

CROCKER'S ASSESSMENT LEDGER.—We hear experienced secretaries speaking favorably of this labor-saving book. The testimony of others will be found in the publisher's advertisement, in our paper.

PLUMBAGO.—A vein of plumbago, or black lead, (*graphite*) according to the Reese River *Reveille*, has recently been discovered in Summit district. The vein is said to be two and a-half feet thick.

NEVADA DAILY GAZETTE.—Judge Stidger has removed the North San Juan *Press* office to Nevada City, and now issues a lively daily at the county seat of Nevada county.

MR. A. F. BLOOD, of Taylorsville, sends us the cash for a list of subscribers living in Indian Valley, Plumas county, one of the pleasantest little vales in California, rich in both agriculture and minerals.

Papers Wanted.—Twenty-five cents per copy will be paid for No. 3 of Vol. 8, (dated Jan. 16, 1864) of the MINING AND SCIENTIFIC PRESS." Send them to this Office.

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

STOCK EXCHANGE.

The unparalleled development of the Mineral Resources of the Pacific Slope, and the daily increasing commerce of the city of San Francisco, have rendered a

PUBLIC EXCHANGE,

Conducted on the same fair business principles that characterize similar institutions in Europe and America, an urgent necessity in this city.

The public are therefore informed that a suitable building has been erected, at 612 and 614 Montgomery St., in which will be held Daily Sessions for the sale of Stocks, Bonds, Securities, Specie, etc., under the following Board of Directors, and subject to the following Rules and Regulations:

Board of Directors.

GEORGE W. DART, President.

WALTER SPARROW,	E. H. WILSON,
JOSEPH CLOUGH,	K. O. STURTEVANT,
HENRY WILLIAMS,	D. J. SULLAHAN,
E. PAVALLIER,	EDWARD FLANAGAN,
THOMAS WALLACE,	J. DE STA. MARINA,
M. G. ELMORE,	E. W. LINSLEY.

Rules and Regulations.

1. The business of the Exchange shall be managed by a Board of thirteen Directors, to be elected annually, and to whom application for membership shall be made. Any question or issue raised touching contracts, made at the Board, their validity or meaning, shall be referred to a committee of five, for investigation and final decision.

2. The Sessions of the Board shall be from 12 to 1 P. M., and from 3 to 4 P. M., each day, Sundays excepted.

3. Only members of the Exchange shall offer Stocks, etc., for sale.

4. The public may bid upon and purchase any Stocks, Bonds, Securities, Specie, etc., that may be offered for sale.

5. Buyers of Stock who are not members must either make a deposit of Ten (10) per cent. of the purchase money at the time of sale, or have their contracts endorsed by a member.

6. Should any member or party refuse to fulfill a contract entered into by him at a Session of the Board, he shall thereafter be debarred from all privileges of the Exchange, at least until he shall have specially performed such contract.

Commissions on Sales

Of United States, State, County and City Bonds; Railroad, Steamboat, Telegraph, Gas, and Water Stocks; Certificates, Bills of Exchange, Treasury Notes, Specie, etc., one-half of one per cent.

Commission on Mining Shares:

Sale at $1 up to $10	$0 25 per foot
Sale at $10 up to $25	50 per foot
Sale at $25 up to $50	1 00 per foot
Sale at $50 up to $100	1 50 per foot
Sale at $100 up to $200	2 50 per foot
Sale at $200 up to $400	5 00 per foot
Sale at $400 up to $600	6 00 per foot
Sale at $600 up to $800	7 50 per foot

From $800 to $3,000 per foot, one per cent. Anything above $3,000 per foot, three-quarters of one per cent. 7v8-tf

North Beach, San Francisco.

THE COMPANY HAVING BEEN TO A LARGE EXPENSE IN enlarging their Works, are now prepared to contract to work any quantity of Gold and Silver Rock, nearer the true assay than any other Company in this Country, or Europe.

G. T. FOUQUE, Superintendent.

S. C. BRADSHAW, JR., Secretary.

Office, 511 Sacramento street, San Francisco. 3-tf

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

Stock Reports.

SAN FRANCISCO STOCK BOARDS.

Crescent City Tunnel & M. Co., Lander county, N. T.; R. H. Bennett, J. N. Plumb, W. H. Knight, Ed. Cohen, Thomas Cahill.

Equal Chance M. Co., Arizona Territory; David Burbank, Thos. Wallace, D. M. Hosmer.

Newby G. & S. M. Co., Lander county, N. T.; S. E. Holcombe, F. S. Carter, Matthew Butler.

Mission Ledge S. M. Co., Lander county, N. T.; R. H. Bennett, J. N. Plumb, W. H. Knight, E. Dunphy, Ed. Cohen, Thomas Cahill.

Rock Rose G. & S. M. Co., Storey county, N. T.; J. S. Yeates, Jr., S. A. Beaudt, G. E. Davis, P. G. St. John, Noble Lovejoy.

Barrington S. & C. M. Co., San Diego county, Cal.; C. S. Hobbs, John S. Samuels, H. H. Gray.

Cosmopolitan G. & S. M. Co., Storey county, N. T.; C. G. Emery, W. C. Fassett, L. G. Clement.

Corral Hill Consolidated M. Co., Lander county, N. T.; James Bryson, J. D. Griffin, A. J. Gove, John Irwin, James Marks.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Harold and Argo G. & S. M. Co.; John K. Harold, M. Broyhill, M. Byrne, Jr., R. C. Chappel, C. H. Knox.

Leopold G. & S. M. Co.; James Sutter, N. J. Gillet, L. W. Cass, J. G. Libbey, John Dohle.

Western G. & S. M. Co.; C. H. Leightner, N. H. Sheldon, Wm. B. Hickok.

Eastern G. & S. M. Co.; same as above.

Judge Advocate G. & S. M. Co.; J. L. Moore, J. F. W. Black, G. R. Scott, H. Fox, J. McGinn.

Erminie G. & S. M. Co.; J. A. Benham, H. Hugnet, H. Herzog, C. B. Kimball.

Silver Age G. & S. M. Co.; Peter Bohn, H. Von Appen, J. Meyer, C. Baker, A. Levy.

Herkimer G. & S. M. Co.; W. B. Caldwell, W. B. Vosburgh, R. J. Mitchell, F. N. Barroughs, G. W. Lamreux.

Noble G. & S. M. Co.; Baron W. Von Stech, B. Franz, J. Ramirez. Gervinus G. & S. M. Co.; same as above.

Before Cutting the Leaves of this journal, stitch each No. hrough the back, or fasten with a large pin, and you will have a taper in the most convenient form possible for reading or reference.

To Printers.—One-half of the MOUNTAIN MESSENGER OFFICE, La Porte, Sierra County, is offered for sale upon moderate and favorable terms. The Office is new, and one of the best in the interior of the State. Its location is a favorable one, in a mining district unsurpassed for richness and permanency in California. Enquire of A. T. DEWEY, Office of the MINING AND SCIENTIFIC PRESS.

"Our Title Clear."—Some Correspondents address this office as the "Mining Journal." As the word journal does not occur in our heading, subscribers should be particular to write the name in full, "MINING AND SCIENTIFIC PRESS." There are other papers published in this city bearing the names of "Journal" and "Press."

J. M. Wolf is our Agent for Virginia City, Gold Hill and neighboring districts.

Correspondence from competent writers is respectfully solicited upon all topics of interest to the general readers of the PRESS Persons possessing a knowledge of new discoveries, curiosities, important improvements or developments, who have not the time or experience to write their observations elaborately, can send us the substance in a few words, and we will care for the rest. The real name of the author must be received, which will be kept confidential.

We have received No 1 of the enlarged MINING AND SCIETIFIC PRESS published by Dewey & Co., San Francisco. It is greatly improved, and gives promise of an excellent, able and reliable journal.—*Marysville Daily Appeal.*

It has been enlarged from eight to sixteen pages, and promises to be a valuable publication.—*Sierra Democrat.*

Is is full of the most valuable reading matter. Those at all interested in mining affairs should subscribe for it at once.—*Alameda Gazette.*

It is devoted to news, art, science and progress, and should receive a liberal support.—*Solano Press.*

The MINING AND SCIENTIFIC PRESS comes to us enlarged to double its old dimensions, and otherwise improved. The PRESS is the only journal on this coast devoted exclusively to mining and scientific matters, and should be read by miners everywhere. It is published weekly, at $5 per year.—*Oroville Union.*

OWEN'S RIVER.—We have been allowed the inspection of several letters recently received from this place. The writers of the same speak in the highest terms of their prospects, richness of the country, its healthy and beautiful climate, etc. The rush thither continues to be as great as ever.

Ore Bags.

10,000 HAND SEWED GOLD AND SILVER ORE BAGS, 100 lbs each. 15,000 Chicken Gunny Pocket Bags, suitable for Copper Ore, 125 lbs each. For sale in lots, by

REYNOLDS, HOWARD & FORD,

11v8-m 313 and 315 Davis Street, San Francisco.

Tenement Wanted—In a pleasant and healthful location, in this city, for a small family, without children. Address P. O. box 17, or call at this office.

Apprentice Wanted.—An intelligent and reliable youth, about 14 years of age, can find employment at this office.

CONTENTS FOR FEBRUARY.

No. 6—FEB. 6.—Lecture on Mining and its Relations to Civilization and Progress—by Professor J. D. Whitney, delivered before the Mechanics' Institute; A Heavy Casting; Coal vs. Anthracite; Mining Gossip—Ophir Dividends, Liberality vs. Litigation, Sharp Transactions and other items; Miners' Laboratory; Owensville Mines; Esmeralda Correspondence; Patent Department; Ho for the Mines! The Foundry Business of San Francisco; Mining Share Market; Washoe Stock Market—Sales, and prices bid and asked in Virginia and Gold Hill; Record of New Incorporations; To Prevent Dampness in Brick Buildings; Sales by the San Francisco Stock and Exchange Board, San Francisco Board of Brokers, and the Pacific Board of Brokers; Prices Bid and Asked; Chippings, and Miscellaneous Items.

No. 7—FEB. 13.—Ventilation of Mines—with Illustrations; Correspondence—Murphys, Calaveras county; The Great Desert and its Mines; Esmeralda Correspondence; California Coal, Iron and Copper; Mining Gossip—by Frank Wardell; Summary of Mining News—from various counties; An Extraordinary Winter; Mechanical Department—Saw Mill, Copper Coating, and other articles; Exposure of Fraud upon Science; Patents and New Inventions; State Polytechnic School; Late E. B. Goddard; Mining Share Market; Washoe Stock Market; The Aquilla and her Cargo; Is there silver this side of the Mountains; Questions Answered; Chippings; Stock Sales; Incorporations, etc.

No. 8—FEB. 20.—Hints to Prospectors; Ventilation of Mines—continued with illustration; Correspondence—Calaveras Mines; Humboldt county, N. T.; From the Humboldt Mines; Santa Fe District, Reese River; From Austin, Reese River; More About Reese River; Mining Gossip; Real del Monte Meeting; Mining Paragraphs; The American Mechanic; Government Experiments in Using Hydro-Carbon Oils for Generating Steam; Patent Department; A Mining School Within Our Reach; A Significant Mining Advertising Bill; Signs of the Times; Gas Explosion in a California Mine; Stock Reports; etc.

No. 9—FEB. 27.—Ventilation of Mines—Editorial; A Gas Cooking Stove—illustrated; Traveling Correspondence—San Andreas, Calaveras county; A Trip to Surprise Valley; From the Humboldt Mines; Mechanical Department—A New Engine for the Gould & Curry Mill, A New Electro-Magnetic Engine; Insect Power; Professor Whitney's Address Before the Legislature; A Mining School for the Day; Summary of Mining News—from Napa county, Sierra, Plumas, Tuolumne, Esmeralda, Humboldt, Reese River, Virginia; Mining Gossip—Real del Monte, Such is Life, After Them, Cannot Agree; Virginia City; Machinists' Tools; Ingenious Piece of Mechanism; Patent Department—Improvement in Generating Steam, A New Crushing Battery, Nail Machine, Improved Saddle; "Chippings;" Washoe Stock Boards; Mining Share Market; Washoe Stock Reports; Record of New Incorporations in San Francisco and Nevada Territory; Stock Sales in San Francisco, for the week, by the Stock and Exchange Board, the Pacific Board of Brokers, and the Stock Exchange; Report of Prices Bid and Asked; A Correct Idea; New Use for Alcoholic Drinks.

CONTENTS FOR MARCH.

No. 10—MARCH 5.—Communication—"Pocket Veins;" Hints to Prospectors; Sierra District, Humboldt county—Description of a Representative Mine; Slang of the Stock Exchange; On the Loss of Gold Attending the Process of Amalgamation; Fraud of Petroleum; Wide West Mining Company; The Term Reese River; Mining Gossip; Washoe Stock Market; Mining News and Items; Our Mechanical Interests; Unwise Recommendation; Coal Creek Coal Company; Patent Department—McCauley's Steam Condenser, M. D. Garrard's Amalgamator, A California Invention, Etc.; A Mining School for San Francisco; A Formation of Black Oxide with a Supposed Decomposition of Nitre; The Drought and Gold Crop; San Diego Copper; Decidedly Arbitrary; Mining Share Market; New Incorporations; The Northern Gold Fields; Stock Market Reports; "Chippings;" Etc.

THE MINING AND SCIENTIFIC PRESS contains 16 pages in each No., and 417 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal commisions allowed all who act as agents.

DEWEY & CO., Publishers.

Cor. Washington and Sansome streets, San Francisco.

THE MINING AND SCIENTIFIC PRESS.—This excellent journal come to us greatly enlarged both in size and extended information. It I the most useful, instructive and necessary paper published in San Francisco for the benefit of miners and scientific men. It should be patronized by every man who has an interest in our mines; for there is no paper in San Francisco that takes such an interest in making favorable mention of the mines in this section and so willing to do them justice as this. It is published by Messrs. Dewey & Co., who are men of ability and understand thoroughly the subjects which they write about. It is a paper of more advantage to the Pacific coast, than is the *Scientific American* to the Atlantic States. It gives full and regular statements of the metal market—of Iron, Copper, Steel, Zinc, Lead and Tin—new incorporations and the price of stocks as they are held in the Stock Broker's Market, together with the daily transactions of the different Boards. Besides this it publishes all the new improvements being made in machinery and the methods of reducing and treatment of ores. In fact it is the greatest necessity of this coast for Miners and Scientific men, for in it they may learn nearly everything they may want to know. It is ever a welcome visitor to our table, and we trust to receive it as regular in the future as we have in the past.—*Esmeralda Star.*

"CHIPPINGS."

KNOWLEDGE and timber should not be much used till they are seasoned.

NEVER quarrel with a lady. If you are troubled with her, retreat.

THEATRES and balls are often the mere embroidery on the tattered clothes of civilized life.

THE present Mayor of Manchester, England, was formerly a vendor of newspapers. Encouraging to newsboys.

MR. SPURGEON, the great English sensation preacher, had to remonstrate with the young ladies of his chapel for fainting away so often.

THE "false hair merchants" of London import annually, at present, no less than five tons of maiden locks. So says an exchange.

NEW GREEN COLORS.—At the recent annual meeting of the Academy of Science, in France, a prize of $500 was awarded to M. Guignet for the preparation of a non-injurious green for printing on tissues, and another of $300 ($1,500 francs,) to M. Bouffe, for having discovered a substitute for a non-arsenical green in the manufacture of artificial green.

WATER-PROOF BOOTS AND SHOES.—Take three ounces of spermacetti and melt in an earthern vessel over a slow fire; add thereto six drachms of India rubber, cut in slices, and these will presently dissolve; then add of tallow eight ounces; bog's lard, two ounces; amber varnish, founces; mix, and it will be fit for use immediately. The boots or other matcrials to be treated are to receive two or three coats with a common blacking brusb, and a fine polish is the result.

WONDERFUL.—An exchange says it is horrible to think what discoveries science is constantly making. It is not sufficient that some eminent astronomer at Cambridge should discover a comet per month, but Professor Tyndall must state that the weight of this earth is such, and the velocity with which it moves so great, that if it should suddenly stop, the heat it would create would be sufficient to reduce it to a thin vapor. Prof. Tyndall adds that, "if after the stoppage of its motion the earth should fall into the sun, as it assuredly would, the amount of heat generated by the blow would be equal to that developed by the combustion of 5,600 worlds of solid carbon."

THE DESERT MINING DISTRICT.—This district appears to be constantly growing in favor and intcrest. The Virginia *Union* of February 27th says:—Tbe minerals in the Desert District consist mostly of gold, and although the ledges are, as a general thing, narrow on top—being only from one to two feet wide, they expand as descended upon, holding their richness at the same time. At a depth of fifty or sixty feet, the lowest depth yet reached on any of them, several have a width of five feet, and are extremely rich in gold—much of it free, and some of the specimens surpassing anything ever found in Gold Hill. The Mark Anthony and Cleopatra ledges, composing the ground of the Golconda Company, amongst the best in the District, are opened by means of a shaft fifty feet deep, and being large and full of metal, are considered very valuable. In the Sebastopol and New Virginia Districts the metal is almost exclusively silver, the rock bearing a close resemblance to that found about Austin, and so far as assays go, it would seem to be nearly equal to the Recse River ores. The Smith & Warfield ledge in Sebastopol is said to be one of great promise. One of the chief drawbacks to the progress of this mining district—the lack of a good road—will soon be obviated. The problem for a supply of water, however, appears to be more difficult of solution. The ditch plans appear to have all resulted in failures, being impracticable. Drinking water is now being packed to the mines from the slough of the Humboldt and sold at two bits a gallon.

Professor Whitney's Lecture.—Extra copies of the MINING AND SCIENTIFIC PRESS of February 6th, 1864, containing the lecture of Prof. J. D. Whitney, (State Geologist,) on "MINING AND ITS RELATIONS TO CIVILIZATION AND PROGRESS," can be obtained by calling at this office.

Pacific Mail Steamship Company.

THE FOLLOWING STEAMSHIPS WILL BE DESPATCHED FROM SAN FRANCISCO IN THE MONTH OF MARCH, 1864.

March, 3—COLDEN CITY.....R. H. Pearson, Commander.
March, 12—ORIZABA.....E. S. Fransworth, Commander.
March, 23—CONSTITUTION,.....J. T. Watkins, Commander.

From Folsom street Wharf, at nine o'clock A. M., punctually,

FOR PANAMA.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York by the Atlantic and Pacific Steamship Company.

Miscellaneous Advertisements.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,
First street, between Howard and Folsom streets,
SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz mill machinery, Mining Pumps, Amalgamators, Retorts, Etc., Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.
San Francisco, February 23, 1863. tf.

PALMER, HANSCOM & CO.,
GOLDEN STATE IRON WORKS,
No. 19, First Street, San Francisco,
Furnish Castings and Machinery of all kinds,
Also Genuine White Iron Shoes and Dies.
PALMER, HANSCOM & CO.

To Quartz Miners.

KNOX'S IMPROVED AMALGAMATING PAN
WITH PALMER'S PATENT STEAM CHEST.

THE ABOVE COMBINATION SECURES THE MOST COMPLETE amalgamation of the precious metals of any process now known. By it steam is introduced in the most effective and economical manner, while it is peculiarly adapted to the catching of floating gold and silver, known to be otherwise lost. Made exclusively by
PALMER, HANSCOM & CO.,
GOLDEN STATE IRON WORKS,
Nos. 19 and 21 First Street, San Francisco.

The public are informed that Letters Patent have been granted the undersigned upon Steam Chest False Bottoms for the inside of Amalgamating Pans or Tubs, and are cautioned against making, buying, using or selling the same without his consent.

STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

Must be seen to be Appreciated!

THE FLORENCE!

A GREAT IMPROVEMENT!

THIS CELEBRATED
NEW SEWING MACHINE
IS ACKNOWLEDGED TO BE
THE BEST IN THE WORLD!

IT MAKES FOUR DISTINCT STITCHES!
IT FEEDS THE WORK EITHER WAY!
WILL SEW OVER THE HEAVIEST SEAMS,
WITHOUT CHANCE OF TENSION!
IT SELDOM, IF EVER, DROPS A STITCH!
IT SEWS WITH SILK OR COTTON THREAD EQUALLY WELL!
IT RUNS LIGHTLY, SEWS RAPIDLY AND IS ALMOST NOISELESS!
IT DOES THE HEAVIEST OR FINEST WORK WITH EQUAL FACILITY!
IT MAKES A STICH ALIKE ON BOTH SIDES OF THE FABRIC, USING ONLY HALF THE QUANTITY OF THREAD NECESSARY FOR THE OLD FASHIONED CHAIN-STICH MACHINES!

WHILE IT POSSESSES ALL THE GOOD QUALITIES OF others, and has many advantages over any and all of them, the FLORENCE is sold at corresponding prices with other first-class Machines. We
WARRANT EVERY MACHINE
To be all that we claim for it, and will give a WRITTEN WARRANTY if required.

AGENTS WANTED in all the principal cities and towns on the Pacific coast.

Send for Circulars and samples of sewing.

DON'T BUY A SEWING MACHINE UNTIL
YOU HAVE
SEEN "THE FLORENCE!"

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners, Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

Secretaries of Mining Companies, Attention!

SAVE TIME AND LABOR!

Crocker's

STOCK & ASSESSMENT LEDGER

IS THE SIMPLEST, MOST ECONOMICAL AND USEFUL WORK EVER PUBLISHED.

Price, $10. Copyright Secured.

☞ Read the following testimonials to its excellence: ☜

We, the undersigned, hereby certify that we have used CROCKER'S STOCK AND ASSESSMENT LEDGER, and find it one of the most useful books ever published for the purpose designed. It is a great saving of labor, and by it Secretaries can keep the accounts of Mining Corporations in a neat and compact manner, and avoid many errors that inexperienced persons might make in stock and assessment accounts. We cheerfully recommend it to the Secretaries of Mining Corporations as a great improvement on the old system.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

For sale, Wholesale and Retail, by SAMUEL ADAMS, U. S. Drug Store, corner of Pine and Kearny Streets, San Francisco. 6v8-2m

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Redneer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

S. Gold Coin, to the Secretary, or to A. E. Shannon, Superintendent.

1I-4t H. B. CONGDON, Sec'y.

Billet Gold & Silver Mining Company, Gen. Scott Ledge, Augusta Mining District, Lander County, N. T.—Notice is hereby given that at a meeting of the Board of Trustees of this Company, held this 5th day of March, A. D. 1864, an assessment of Twelve and one half (12½) cents per share was levied upon each and every share of the Capital Stock of the Company, payable immediately to the Secretary, in U. S. Gold Coin, at his Office, No. 509 Clay Street, San Francisco, or to S. F. Ambler, at Austin, N. T. By order of the Board of Trustees. D. B. FRANCIS, Sec'y.

11v8-4t

Santa Maria Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305, Montgomery street, San Francisco, Feb. 23, 1864.—Notice is hereby given that at a meeting of the Board of Trustees, held this day, an assessment (No. 2) of fifty cents per share was levied on each and every share of the capital stock of the above company, payable immediately, in gold coin, to the Secretary, at his office. By order of the Board of Trustees. (9v8-4t.) J. S. LUTY, Sec'y.

Emmett Copper Mining Company, Office No. 645 Clay Street, San Francisco, February 19th, 1864.—Notice is hereby given to the Stockholders of the Emmett Copper Mining Company, that an assessment, No. 4, of 37½ cents per share was this day levied on each and every share of the Capital Stock of said Company, payable immediately in United States Gold Coin, to the Secretary, or to L. Honigsberger, Copperopolis.

8v8-4t M. G. ELMORE, Sec'y.

Give the Name of the District.

We are requested to call the attention of Secretaries of Mining Companies to the importance of inserting in their advertisements, of whatever character, the name of the district or locality. Considerable trouble arises from this neglect, as there are Companies bearing the same name, although situated in different localities. Attention to this matter will not only be a benefit to others interested in Mining Companies, but also to the Secretaries themselves.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

Prof. J. D. Whitney, Dr. T. M. Logan, Dr. J. A. Veatch, Rev. O. C. Wheeler, M. Atwood, Prof. W. H. Brewer, J. H. Churchill, A. M., A. B. Paul, H. S. Brooks, W. Wadsworth, T. Price, J. E. Clayton.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralogical questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the Press will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

Office in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

C. W. M. SMITH.....W. D. EWER.....A. T. DEWEY.

Information Furnished.—Miners, Mechanics and others desiring information upon any subject relating to inventions and discoveries, or the principles of mining, mechanism, chemistry or natural sciences, by addressing us will receive answers to their enquiries, either through the columns of the Press—or by private letter, in accordance with the best judgment and information we can obtain.

The Law for Publishing Legal Mining Notices.

An utterly erroneous opinion having been engendered in the minds of some (through misrepresentations and interested motives of others), that the laws of this State technically require the publication of mining notices to be be made in a daily paper, we take occasion to quote the following positive passage concerning the publication of mining notices, from the latest statutes passed by our Legislature on the subject, March 5th, 1861, which has not since been altered or amended:—

"Notice of each such call, or assessment, shall be given to the respective stockholders personally, or shall be published once a week for at least four weeks in some newspaper published at the point designated as the principal place of business of the corporation, and also in some newspaper published nearest to the point where said mining operations are being carried on. If, after such notice has been given, any stockholder shall make default in the payment of such call, or assessment, as to the shares of stock held by him, so many of such shares may be sold as will be necessary for the payment of the call, or assessment, on the shares held by him. The sale of said shares shall be made as prescribed in the by-laws of the company; *provided*, that no sale shall be made except at public auction to the highest bidder, after a published notice of thirty days, published as above mentioned; and that at such sale the person who will agree to pay the call, or assessment, so due, together with the expense of advertisement and the other expenses of the sale for the smallest number of whole shares, shall be deemed the highest bidder."—[Passed March 5th, 1861—Stat. 1861, p. 14.

The above is indeed plain, and we hold ourselves responsible for the assertion that a weekly issue of a mining notice is as valid as that of a daily. By publication in the Mining and Scientific Press, a wide circulation is given to notices, particularly among miners and shareholders in this city and throughout the State and Nevada Territory. A weekly publication is also secured at a material saving in cost to shareholders.

Poindexter Silver Mining Company, Reese River Mining district, N. T.—Notice is hereby given, that at a meeting of the Trustees of the above named Company, held the 20th of October, 1863, an assessment of Fifty cents per share was duly levied on each and every share of the Capital Stock of the Company; and at a meeting of the Trustees held Feb. 27th, 1864, an assessment, No. 2 of fifty cents per share was duly levied on each and every share of the Capital Stock of said Company, payable immediately to the Secretary, in U. S. Gold Coin, at his office, No. 35 Government House, or to the Agent, Wm. Alpheus Smith, at Austin, N. T.

San Francisco, March 1st. (10v8-1m) JAS. C. NORRIS, Sec'y.

Office of the Belle Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. San Francisco Feb. 23, 1864.—Notice is hereby given that at a meeting of the Board of Trustees of the above Company, held this day, an assessment (No. 2) of fifty cents per share has been levied on each and every share of the capital stock, payable immediately, in gold coin, to the Secretary at his office. J. S. LUTY, Sec'y, 305 Montgomery.

9v8-4t.

Maryland Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305 Montgomery street, San Francisco, Feb. 25, 1864.—Notice is hereby given that at a meeting of the Board of Trustees of the above named company, held this day, an assessment of fifty cents per share has been levied on each and every share of the capital stock, payable immediately to the Secretary, at his office. By order of the Board of Trustees.

9v8-4t. J. S. LUTY, Sec'y.

Picayune Gold, Silver and Copper Mining Company, Bear Gulch, Calaveras Co.—At a meeting of the Board of Trustees of the above Company, on the 17th day of February, 1864, an assessment of six cents per share on each and every share of the Capital stock of the said Company was levied, payable on or before the 22d, day of March, 1864. And Notice is also hereby given that the first annual meeting of the Stockholders of the said Company will be held on Tuesday the 22d day of March 1864, at the office of the Company at Copperopolis, for the purpose of electing officers for the ensuing year, for the adoption of By-laws, and for the transaction of such other business as may come to its notice. All Stockholders are respectfully requested to attend.

By order of the Board of Trustees,

L. HONIGSBERGER, Sec'y.

Copperopolis, Feb. 17th, '64. 9v8-4t

Imperatrice Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305 Montgomery street, San Francisco, Feb. 24, 1864.—Notice is hereby given that at a meeting of the Board of Trustees, held this day, an assessment (No 2) of fifty cents per share was levied on each and every share of the Imperatrice Silver Mining Company, payable immediately, in gold coin, to the Secretary, at the Company's office. By order of the Board of Trustees. (9v8-4t.) J. S. LUTY, Sec'y.

Enterprise Copper Mining Company.—Office 645 Clay Street, San Francisco, Feb. 13th, 1864.—Notice is hereby given, that there will be sold at the Office of the Enterprise Copper Mining Company, on Saturday March 19th, 1864, at 10 o'clock A. M. so many shares of the Capital Stock of said Company as will be necessary to pay all assessments due and delinquent, standing in the names of the following parties:

VOLUME VIII. SAN FRANCISCO, SATURDAY, MARCH 19, 1864. NUMBER 12.

Contents:

No. 12—March 19.—Farrand's Amalgamator—Illustrated; Important Developments; Copper as an Investment; What Science Saves in Mining; Treatment of Gold Ores and Sulphurets; Treatment of Silver Ores; Washoe Mining Items; Mechanical Department; Mining Gossip; Patent Department; A Remarkable Indian Tradition; Mining Share Market; San Francisco and Washoe Stock Reports; "Chippings;" Etc.

Editorial.

Importance to a California Miner of a Knowledge of Mineralogy.

NUMBER II.

The practical miner seldom holds mineralogy or geology in much estimation, and smiles at the nice discriminations of the mineralogist. If any enquiry into the interesting phenomena of metalliferous veins he made of him, he generally prefers the theory of his forefathers to that which has arisen from the results of more recent scientific investigations.

It must not be inferred from the foregoing remarks that I undervalue practical knowledge, so far from this I am convinced that scientific, apart from practical knowledge, would lead to erroneous and occasionally ruinous results.

It is surely clear to all that the miner ought to be thoroughly acquainted with the nature of those substances which it is his daily task to seek in the recesses of the earth, as well as with those which exert a favorable or a pernicious influence either on the abundance or quality of the objects of his search. For instance, the presence of galena (sulphuret of lead) and blende (sulphuret of zinc) in the auriferous veins of his district, are perhaps as good an indication of the richness of the vein as any we can have, where the gold itself is not visible. When it is necessary to assort the veinstone, so as to reject the poorer parts before stamping it, as practised in most of the Brazilian gold mines, a knowledge of mineralogy is of great assistance. The separation by the hammer (a most important process) is but little used in this State. Some of the mining districts of Great Britain are utterly destitute of the means of mineralogical education, and it is common to find some of the most intelligent miners only acquainted with one or two substances, which are brought prominently before them in the routine of their employment.

It is a fact, that for some years lime was exported to New South Wales, where it existed in abundance in its natural state, and it is notorious that the discovery of gold in Australia was not made till after it was found in this country.

Cornwall, although it has been celebrated for its tin mines from the earliest periods of history, yet, until the last century, the ores of copper were used to repair the roads, and whenever copper appeared in a vein, it was a common expression that "the ore came in and spoilt the vein." Even when the yellow ore or copper pyrites had been long appreciated, the sulphide of copper was thrown away, and the rich, black ore, or oxide of copper, was washed into the rivers.

In Derbyshire and Cumberland, although it is indisputable that lead has been smelted from the common blue ore (sulphuret of lead) ever since the government of the Romans, yet the other ores of the same metal (white carbonates of lead, etc.,) were never thought of, but left in heaps as rubbish—the public roads which had in some instances been repaired with these rejected ores, have been taken up and smelted to good account. The ores of zinc, both sulphurets and carbonate, were likewise thrown away in many of the mining districts of England, until within the last few years. I have known blende mistaken for lead ore, and a blast hearth erected to reduce it. and in another case, from its resemblance to a certain iron ore, a considerable quantity was bought and conveyed to one of the largest iron works in South Wales.

I did not suppose when assisting to collect the series of iron ores for the Great Exhibition of 1851, that the few stones I took from the oolitic formation, would have been attended with such important results. It soon after led to the discovery that the road into Northampton had been cut through rich iron ore, which in some places had a thickness of twelve feet. Then they were ignorant of its value, but now it is being sent in immense quantities to supply the Staffordshire iron works.

So much having been overlooked in a country densely populated like Great Britain, whose mines now yield on an average about $150,000,000 per annum, it is reasonable to conclude that still further and more important discoveries will yet be made in this State.

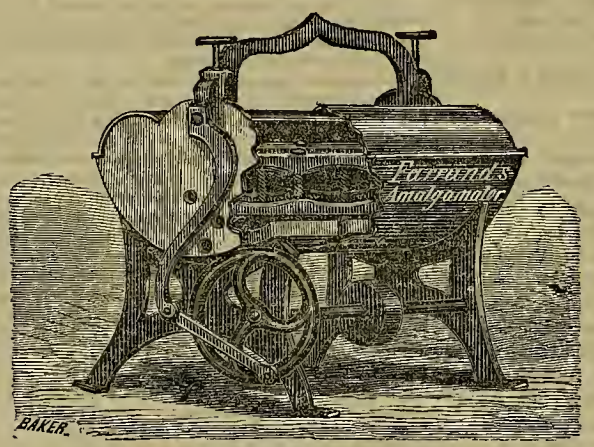
It is true that the most valuable productions of the mineral kingdom are met with in such a state of impurity from mechanical aggregation and admixtures, that the particular minerals of which they are composed are not separable by physical means; others occur only in an amorphous or irregularly shaped condition, and that scientific mineralogy describes only the most perfect individuals, or crystals of each species; bodies which are rarely met with—hence the necessity and advantage of a good collection of minerals, and the great importance to a State like California to have a museum of practical mineralogy and geology. *

Meteorological Observations.—Downieville, Sierra county; altitude, 2,931 feet. Reported by Dr. T. R. Kibbe, for the month of February :—

Amount of rain during the month of February, .55.
Lowest range of thermometer 27° (above zero).
Mean temperature for the month, from observations taken o'clock P. M., in the shade, 62.04.
Clear days, 27.

FARRAND'S AMALGAMATOR.

The accompanying illustration presents a perspective view of Farrand's new patent amalgamator, with a portion removed so as to admit of a partial inside view of the same. This machine consists of a semi-cylindrical, trough-shaped vessel, the interior of which is furnished with moveable concave dies, to be replaced when worn out, as in ordinary pans. The mullers are convex and attached to a substantial rock-shaft, by which they are moved back and forward by crank or eccentric motion. The mullers are held to their places by springs of moderate strength the pressure of which may be easily regulated. The oscillating motion of the mullers serves to keep the pulp in a constant state of agitation, thoroughly mixing it, and passing it under the mullers without resort to any of the various expedients employed in pans where a circular motion is maintained. In working this amalgamator no quicksilver is placed in the pulp until the trituration is completed. That done the mullers are raised, so as to completely break contact with the dies, the quicksilver sprinkled into the mass and the machine set in motion again, the mullers simply acting as stirrers; which they do most effectually. The peculiar construction of this machine admits of its being worked with a much smaller charge of quicksilver, to any given amount of pulp, than the flat bottomed pans. It is moreover claimed that these springs greatly assist in the work of reduction, by allowing the free admission of the pulp between the mullers and dies, so that the pulp is made to actually work upon itself—as the dust of the diamond is made to reduce the gem itself. The advantage derived of thus avoiding all trituration in the presence of the quicksilver, must be apparent to every one, at all acquainted with gold or silver amalgamation. Trials made with this machine in the presence of *experts*, have been pronounced highly satisfactory. It is said not only to do its work most excellently well, but to accomplish more in a given time, than can be done by the ordinary pan process. It is claimed that the peculiar action of this machine results in a great saving of power over the ordinary process. Of this parties will have ample opportunity to satisfy themselves, by personal inspection of the machine, now in operation on Market street nearly opposite Sansome, but which will soon be removed to Commercial street between Davis and Front. This amalgamator also possesses important advantages in the way of simplicity and economy of work and construction. We should judge it could be manufactured for a comparatively low price; and being lighter in its construction and general details, can be transported to places of difficult access at light comparative cost. It is peculiarly well adapted to employment by small mining operators in distant localities, as it can be readily taken to pieces and packed upon mules. The machine will be constructed of various capacities to work from 300 to 600 lbs. in three hours.



A NEW AMALGAMATOR.

TREATMENT OF SILVER ORES.

The amalgamation of silver ores is usually performed by two distinct processes. In Europe the process generally known as the "Freyberg Process," is almost universally employed. The second is known as the "Mexican Process," and differs from the European chiefly in being conducted without any previous roasting of the ores.

The processes generally employed in Washoe are of a complex character, consisting of various modifications of the European and Mexican processes. It is not until quite recently that the Washoe ores have, to any great extent, been submitted to previous roasting. The simpler character of these ores, when found near the surface, has hitherto been such that they have yielded to mere mechanical processes. As the mines have progressed in depth, however, the ore has has materially changed to a more stubborn character, presenting the usual characteristics of silver ore as found in European and South American mines. Roasting will soon, in all probability, have to be generally resorted to.

The following are some of the principal processes employed in Washoe, where previous roasting is not resorted to. The ingredients are usually placed in a cask with water and dissolved by heating with steam; a portion of the liquor thus formed is drawn off and placed in the pan with each charge of sand:—

To 12 tuns rock: 10 lbs. copperas, 20 lbs. sulphate iron, 10 lbs. catachu, 3 lbs. sal ammoniac, 150 lbs. salt.

To 5 lbs. rock: 4 ozs. oxalic acid, 4 ozs. nitrate potash. 3 ozs. alum, 1 oz. sal ammoniac, 12 ozs. salt.

To 60 gallons water, add 4½ lbs. sulphate iron, 2 lbs. sulphate copper, 1½ lbs. sal ammoniac, 2 to 10 lbs. gum catachu. To 100 lbs. sand put 2 quarts of this; before flowing off, add salt.

To 10 tuns rock: 30 lbs. sal sodium, 6 lbs. sul. copper, 3 lbs, sal ammoniac.

To 100 lbs. rock: 18 ozs. nitrate potash, 1 oz. sulphate sodium, 18 ozs. salt.

The relative proportions of the several ingredients must of course be varied to suit the different characters of ore. It requires skill and experience to accomplish this successfully; but a competent amalgamator will soon discover, by experiment, the modifications necessary. The above are merely the basis of the processes. The operator must so apportion his forces as to make the attack successful.

The second, or "Mexican Process," known also as the Pateo Process, was described at length in our columns, some fifteen months since; but, in accordance with the request of numerous readers, who have since become subscribers, we propose to reproduce those articles, or give a digest of them, at some future time.

The first, or European process, is probably more systematically and economically conducted at Halsbrucke, in the immediate vicinity of Freyberg, Saxony, than at any other locality. The usual constituents of the ores there treated, in addition to the silver they contain, are sulphur, arsenic, antimony, copper, lead, iron and zinc, which are more or less mixed with various earthy minerals, besides sometimes containing small quantities of bismuth, nickle and cobalt. It will be noticed by those acquainted with the silver ores found on the Pacific coast, that those treated at Halsbrucke are similar to the most refractory portion of the ores found at and beyond Virginia City, and especially in the Humboldt region, with the exception of the "nickle and cobalt." Zinc is sometimes found in the silver ores of this coast. The important distinction between the European and the Mexican and the complex process employed at Washoe, consists in the previous "roasting." This process is correctly described as follows in "Pique's Practical Treatise" on the chemistry of gold, silver, etc. We copy:—

In the selection of these ores, they are so assorted as not to contain above four per cent. of lead, or one per cent. of copper, as from combining with the mercury added, these metals give to the amalgam a pasty consistency, and thereby render the treatment extremely difficult and expensive. The different ores selected for amalgamation vary in richness from fifteen to two hundred ounces per ton. Formerly the mixture of these ores was so arranged that the charges of the furnaces should always contain from seventy to eighty ounces per ton. It is, however, now usual to work the poor and rich ores separately, since it is found that the total loss of silver in the residues is thereby considerably diminished.

The mixtures of the poorer ores afford, on an average, from thirty to forty ounces per ton, whilst the amount of silver in those of the richer ores varies from ninety to one hundred and thirty ounces per ton. It is essential that both mixtures should contain a certain proportion of sulphide of iron, which is necessary to the success of the roasting process. The quantity of sulphide of iron should not be less than about twenty-five per cent. If the amount of pyrites, naturally occurring in the ores, is not equal to this proportion, addition is made either of that mineral or of ready formed sulphate of iron. Frequently, however, the ores at Freyberg contain much more pyrites than is required, and in such cases it is advantageous to subject a few of the most sulphurous *to a previous roasting without salt*, in order to reduce the average amount in the whole to the right proportion.

The ore when prepared is laid on a large floor, 40 feet in length and 12 in width, and on the top of it is thrown about ten per cent. of common salt, which is let drop from an upper room, through spouts placed in the floor for that purpose. The heap, when it has thus been made up of alternate strata of ore and common salt, is well mixed by being carefully turned over with a shovel, and then passed through a coarse sieve. It is subsequently divided into small parcels, called *roast-posts*, each weighing from four and one-half to five cwts. Some idea may be obtained of the annual amount of ore thus treated from the fact that the salt annually employed for this purpose at the Halsbrucke works amounts to five hundred tons.

The mixture of ore and salt is now roasted in reverberatory furnaces, provided with fume flues, for the reception of the pulverulent matters, mechanically taken over by the draught.

The prepared charge is spread on the bottom of the hearth, where it is at first gently heated, for the purpose of expelling the moisture, which to a greater or less extent it invariably contains. During the process of drying, which usually occupies from twenty to thirty minutes, the charge is kept constantly stirred by a long iron rake. The lumps, which are formed in this operation, are then broken down by means of an iron beater, provided with a long iron handle. The heat is afterwards raised, white fumes are given off, and in about two hours from the commencement the whole mass has become red hot. The charge is occasionally turned so that every particle of ore may be equally exposed to the fire; and during the whole time, the mass must be diligently stirred with the rake. The fire is now left to burn down and the combustion of the sulphur aided by constant stirring. This must go on without intermission until the mass has become quite dark, and a sample taken from the furnace no longer evolves any odor of sulphurous acid. During this period the ore increases in volume, and the particles hang so loosely together that the movement of the cake is scarcely at all impeded. The heat is again raised for about three-quarters of an hour; formed in the combustion of the pyrites, reacts on the common salt, and causes the evolution of chlorine and hydrochloric acid gases, which, coming in contact with the sulphide of silver, quickly convert it into chloride. The chlorides of the other metals present are at the same time formed, together with sulphate of soda. When the roasting is terminated, the charge is raked from the furnace into an iron barrow, and thence removed to an adjoining floor. The ore is afterwards raised to an upper story for the purpose of being passed through a set of sieves, by which the finer powder is separated from the agglutinated lumps. These are broken down to a proper size, and a part re-roasted by adding a small quantity to each of the ordinary charges. The remainder is mixed with two or three per cent. of salt, and calcined in the usual way. The finer particles, which pass through the sieves, are, on the contrary, taken to a pair of heavy mill stones, where they are reduced to the state of an impalpable powder.

After the roasting, the ore, besides various earthy salts, consists chiefly of oxyd of iron, basic sulphate of iron, the protochloride and perchlorides of iron and copper, and portions of oxyd and sulphate of copper, sulphate of lead, oxyd of antimony and zinc, and a small quantity of metallic sulphides, in addition to sulphate of soda, and the excess of common salt employed. The compounds of silver, originally present in the mineral, are found to be converted into chloride, with the exception of a trace of metallic silver, and perhaps also of a minute quantity of sulphide and oxyd of silver, which remain in the residues. The charge in roasting suffers a considerable diminution in weight, amounting in general to about ten per cent. This loss is due to the escape of sulphur, chlorine, particles of salt, zinc, antimony, arsenic and chloride of iron.

The *roasting* being thus completed, the amalgamating is next performed by the "barrel process," now in general use in Washoe, and with which our silver miners are generally so familiar that an extended description is scarcely needed.

TREATMENT OF GOLD ORES.

A series of important and highly interesting experiments for the thorough and economical working of gold ores, was undertaken some five or six years ago, under the authority of a Commission appointed by the Russian government, and especially directed by some of the most eminent chemists and best practical miners in Europe. The results of these experiments were published in Europe at the time, and excited no little degree of interest among those engaged in gold quartz mining.

These researches and experiments were principally confined to two leading objects: — 1st, the utility, or economy of roasting the ores in bulk, before crushing; and 2nd, to an enquiry into the nature of the auriferous pyrites, and the best mode of treating them with reference to the extraction of the gold which they contain. It is our present purpose to lay before our readers some account of these and other experiments, with incidental remarks and the conclusions. We propose to consider first the

ROASTING OF GOLD ORES.

The economy of this process is a matter which has attracted the attention of both the scientific and practical miner for upwards of two centuries. As long ago as 1629 Lazarus Erckern, the Assayer General of Germany, published a work on gold ores and metallurgy, in which he took ground against the practice of "roasting" gold or silver ores, for the reason that careful experiments had satisfied him that a large percentage of the metal was lost by the operation. Since that time much has been written upon the subject, and, until recently, a very great diversity of opinion has existed among miners and scientific men in England and on the continent. Modern discoveries in chemistry have very greatly facilitated researches of this description, and such experiments are now conducted in a manner which dispels all doubt as to the accuracy of the results and conclusions arrived at. It is under such favorable circumstances that the experiments above alluded to have been made and the conclusions drawn therefrom are very decidedly *against the roasting process.*

The official report of the Russian experiments, which were conducted among the mines at Ecatharineburg, states that the ore when roasted in hermetically sealed crucibles lost 20 per cent. of gold, and 4¾ per cent. of silver. Ore roasted on an uncovered hearth resulted in a loss of *forty per cent.* of gold, and *twenty-one per cent.* of silver! The same experiments were repeated at many different mining localities, and everywhere with similar results. They have also since been repeated in England, though in a less elaborate manner, but still with sufficient exactness to satisfy the experimentors of the general correctness of the result given in the Russian official report.

The following are the published opinions of several practical miners and metallurgists in different parts of Europe, who have devoted much attention to this subject:

"Trehern, at Marmato, roasted the ore in a reverheratory furnace, and though the show of gold was great, it only yielded about one fifth of what was obtained from an equal portion of the unroasted pyrites.

Leary, at Marmato, roasted his ore and found he got less gold than he would have obtained by the most ordinary method of the Batea. He roasted his ore to that degree, 'that the color of the slime, which

escaped in abundance from the stamp pits, was deep red brown, or hematite red.'

Again, he found one-third of the gold remained after roasting, in some manner nssocinted with the sulphuret of silver, and other products formed by the process of roasting.

Degenhardt has an opinion that the gold forms a sulphuret and is perhaps carried off through the chimney, on account of the silver, which formerly was alloyed by the gold having entirely disappeared during the process of roasting.

Philips in his 'Metallurgy,' says: 'Gold is not directly attacked by sulphur at any temperature; but when fused with the alkaline sulphurets, is rapidly acted on with the formation of a double sulphuret, in which the sulphuret of gold acts the part of an acid.'

'I am fully impressed with the belief that the ore if ever roasted will cause you a loss of that gold, which could have been much easier ascertained by simply stamping it, and causing it to pass over mercury or skins.'" — *MS. Correspondence.*

Whether the loss from roasting, results mainly from the carrying away of the extremely fine particles of gold by the upward current of air from the burning mass, as a light breath of wind carries off the leaf gold in a guilder's room; or whether some chemical change in the gold occurs by which it is oxydized; or whether the loss results from sublimation are matters with regard to which there is yet much diversity of opinion. All are agreed, however, that serious loss arises from both the first and third suppositions; but with regard to the "oxydization" much doubt exists — although there is great probability that such a chemical change may take place to a limited extent.

Whatever difference of opinion may exist with regard to the causes of loss, the practical question of the economy of roasting is now very definitely settled among European operators in gold ores, and it should be considered a conceded fact among our own miners, that gold or silver ores roasted, either in open heaps or reverberatory furnaces, or in any other manner, will not yield as much ore as a similar portion of the same ore taken from the same heap, and equally rich, will do without being roasted.

SULPHURETS—THEIR NATURE AND TREATMENT.

It is a mistaken idea, and one which has too generally obtained, that practical gold mining needs but little or no study beyond that necessary for the mere mechanical extraction of the ore from its veins, and the most economical method of reducing the same, preparatory to its passage over the blankets or through some approved apparatus for amalgamation. In no part of the world is this idea more general than in California. This fact arises, no doubt, in the circumstance that here are found great numbers of veins exceedingly rich in the precious metal, where but very little attention is needed to realize almost fabulous returns. Here, men in their anxious haste to get rich, cannot stop to study or closely examine, but pass on from one locality to another, in the eager search for a "great strike," where they may take out their "pile" in a few months, or years at most, and then go elsewhere to enjoy their gains. While a scanty few are successful in such practice, the great mass, thus go on from one location to another for months and years, until they become perhaps discouraged and disgusted with the very idea of mining. It was owing to this latter characteristic of our miners that quartz mining was so well nigh abandoned a few years since in this State; it is to the wiser policy of patient and intelligent application—of study and close examination, that we now behold this interest taking a leading position in our industrial pursuits. It is to be hoped that the period is not far distant when a full and thorough investigation of the properties and condition of our mineral veins shall be made by men of energy, and of acquirements and experience, which shall fully qualify them for such a task.

Each class of mineral veins is a study of itself. The study of iron alone will occupy a life time; so also of lead, copper, silver or gold. The *masses* of operators, as we have elsewhere said, cannot go into the intricacies of such studies, but with a very little attention they may be enabled to make an application of general principles to particular localities. It is a proper exposition of these principles and their application to some of our most important veins that we now need. This is a work, the *onus* of which should fall upon the government. Of this matter we may speak more at length at another time. We set out to give an account of the nature and treatment of sulphurets, and will now return again to our subject.

The sulphuret of iron, or iron pyrites, although one of the most common and widely diffused minerals on the globe, is nevertheless one of the least understood. Many of the phenomena connected with this mineral are very curious and interesting, notwithstanding the little that is generately known of them. The very combination, even of this mineral, is a matter of doubt. Although it is well known that it consists of sulphur and iron, still the peculiar state in which they are combined, and the condition of their separate ingredients during the period of combination, are matters which have never yet been explained. It has not yet been shown whether these pyrites consist of an aggregate of sulphur and iron, or a chemical compound of the two.

Some veins abound with bright glistening pyrites of a cubical form; some with those of a dull black color; and others still with cellular cavities partially filled with soft and almost impalpable powder, varying from a light to a dark brown, which is the resultant of a natural decomposition of the pyrites, and is called the sulphate of iron. Some of the cavities of the cellular or "honey comb" quartz contain the pure flour of sulphur unmixed with anything save, perhaps a trace of gold. The iron has entirely disappeared, through the unbroken and compact mass of quartz, without leaving even a *stain* to mark its former habitation, or its exit. How it has thus disappeared none have yet told us. That these cavities once contained chrystals of sulphuret of iron there can be no doubt. What mystic power has formed them, filled them with hard and perfect chrystals, and subsequently changed their condition and removed a large portion of their component parts without in the least disturbing the nicely formed and delicate angles, or any portion of the surrounding and refractory silica, has never yet been satisfactorily ascertained. There can be little doubt, however, that galvanism, the great supposed agency of Nature in her wondrous and invisible laboratory, has acted an important part in conducting this curious process.

It has long been known that in many great gold bearing veins, these sulphurets, although occupying but a very small portion of the mass of the ore, (say from three to eight per cent. only) nevertheless contain a large proportion, and in many cases a large majority, of the gold contained in the entire mass. It is furthermore well known that the gold is more readily collected from the quartz itself, than from the sulphurets, and the great discrepency between the assay and the practical yield, is mainly owing to the refractory nature of the sulphurets in yielding up their portion of the gold in the working process. Hence it becomes absolutely necessary that the *sulphurets* should become a subject of careful and continuous study.

Experiments have fully shown that a process suitable to one class of sulphurets will not answer so well for another. This fact was sufficiently proved by the Russian experiments already alluded to, in the following manner, and with the annexed results.

1st. A given quantity of argentiferous pyrites, not containing gold, and in which the actual quantity of silver was determined by assay, was taken and to them were added a given quantity of powder of gold chemically prepared. The mixture was then roasted upon a tile, in a muffle. This experiment was repeated several times, with the following results, viz: 14, 16, 20, 22, 26, 37 and 40 per cent. less gold was obtained than was originally put into the mass!

2d. To demonstrate that the presence of *sulphur* was not the cause of the loss of gold, a given quantity of powder of gold was mixed with an ore of iron, containing the oxide of iron and water and carbonic acid, but in which was neither gold or sulphur. The mixture was roasted as above, and the results showed a loss of from seven to twenty-three per cent. of gold dust.

3d. Experiments with different lots of pyrites mixed with the same sort of iron ore as above, into which given quantities of gold were thrown, showed losses varying from four to twenty-four per cent.

4th. Gold mixed with ordinary volcanic sulphur, and treated precisely as above, lost only *four per cent.*, probably because the powder of gold was so suddenly melted into an agglomerated mass that there was no opportunity for it to pass off in its original form with the vapors of the sulphur.

The unavoidable conclusion from these experiments is, that gold, when mixed with substances susceptible of volatization by the action of heat, volatizes with them, *in proportions commensurate with the peculiar condition of the bases with which it is mixed.* The officer in his Report to the government also states that the more heat employed in the process of roasting, the greater was the loss of gold. It appears from the report to be a very marked fact that the loss varied very materially with the different qualities and conditions of the ore.

There is one circumstance noted by M. Bassingault, who, among others, has repeated these experiments, which, if correct, is of considerable importance. He found that by *the addition of common salt* to the mass during the roasting process, the result showed much less loss than *without that addition!*

IMPORTANT DEVELOPMENTS.

The Ophir company, during the past week, has struck some valuable ore about sixty feet north of the Central Co's line, in a new winze which they are sinking from their lower gallery. The point where this ore has been struck is nearly one hundred feet below the lowest place at which the mine has yet been regularly worked. It is at about the level where their seventh gallery will be commenced. A small quantity of ore only has been taken out, but it is very rich; computed to be worth from $800 to $1,000 per ton. The extent of the deposit of course cannot be known until they commence drifting upon it. We understand it to be the purpose of the Superintendent to run a gallery from this point, along the direction of the lead and through the Mexican mine, to intersect the main shaft which is now being put down at a point about one hundred feet north of the Mexican north line. This drift or gallery will thus be about 340 feet in length.

This strike may be regarded as one of the most important developments recently made in the Comstock lode; as all the developments hitherto made, at any considerable depth on this lead have been anything but promising, considering the extraordinary richness of the ore found near the surface. This strike is highly encouraging to the adjoining "Mexican" and "Central" companies, who are sinking toward the same level.

Something new and important is also reported from the Gould & Curry, the past week. This company is now said to be getting out ore quite different in appearance from anything hitherto found in the Comstock lode. This ore is the color of raw umber and contains streaks of a bright blue mineral, similar to blue carbonate of copper, and is filled with bright scales of native silver. We do not know whether a large amount of this character of ore is likely to be found.

The above developments, added to the generally encouraging appearance of the mines in that region at this time, appear to be creating a renewed confidence in the permanance and ultimate profit of the mining interest generally.

OVER THE MOUNTAINS—The Virginia *Union* says a great many ladies are coming over from California this spring. The *Union* is glad to see them coming —the society of the Territory needs the ameliorating influence of woman.

MINING GOSSIP.

EDITED BY FRANK WARDDELL.

[In this department of the Mining and Scientific Press we propose to give various and brief accounts of mining companies, and shall, under all circumstances, write *plainly* respecting their merits and de-merits; furthermore, we shall bring to light such transactions as may come within our knowledge regarding the "Bulling and Bearing" system and the "underground" actions of both Trustees and Brokers. We are vain enough to suppose, at all events, that we have the "inside track," and shall, without *hesitancy or fear*, give to the public, from time to time, a peep behind the scenes whenever the occasion justifies. If, in doing so, at any time we have fallen in error as to our report, and it can be so proven, nothing will afford us more pleasure than to make the "*amende honorable*" by correcting the same. We shall feel under obligations to those who are interested in stock if they will communicate to us such items as may come under their observations, and which will prove interesting to our readers. This department is open for free discussion to "one and all." Our object is to render justice to every one. Communications, in all cases, must contain the author's name and address to insure publication, which will be kept *strictly confidential*—otherwise no notice will be taken of them.]

A Few Minutes on Montgomery Street.—On Tuesday morning we concluded that a little social stroll and friendly chat among the brokers would prove advantageous to us, in the way of procuring a few items; off we started for Montgomery street, and were not there long before we ascertained there was quite a lively time, and consequently much "hacking and filling" by the brokers, in a stock called the North Potosi. At this moment, in casting our eyes across the street, we discovered a group of some six stock operators, and among them two or three well-known "sharpers" in that branch of business. So over we went, and quietly listened to what was going on. One of the party made the assertion that North Potosi had lost its suit, and the stock would "tumble" in the Board to almost nothing. Another said he "couldn't see it," and, what was more, he was ready to back his opinion by a few twenties, if agreeable. No sooner said than done; up went the money, and the bet closed. Another remarked that it was all a "dodge" to lower the stock, and that no telegraphic despatch had been received; and so the conversation went on, until after the morning session of the Board, when most brokers seemed to be of the opinion that North Potosi was "very sick." We saw many a hard-earned dollar invested in this stock on that eventful morning—yes, we may well use the expression eventful, for it no doubt proved so to many. We know of two parties who were almost ruined, having bought in at high outside rates. We thought to ourselves, when inspecting the market quotations after the Board was out, what must now be the feelings of those unlucky purchasers at high figures? Such are indeed the risks that operators are subject to. Why, then, should we wonder if their countenances do occasionally look care-worn, and their minds seem troubled? It is not at all surprising, and it is only a wonder to us that some of them do not go crazy with so much business and care on their minds.

The Cry is Still They Come.—Still another new Stock Board has come to life, bearing for its name the "City Stock and Exchange Board." Well, well! we were under the impression that this city was rather well supplied with such institutions, but, somehow or other the brokers' opinions (so it seems by their actions,) differ from ours. Very good, gentlemen; "hold your own" if you can. We would like to see this city able to support a dozen Exchanges, and give all of our worthy brokers a chance to get rich.

Quite Laughable.—It is really good sport to witness the actions of some of the "old corner" stock sharpers when trying to effect a sale. Notice how cool and unpretending they play their little game of "clean out" upon those unsophisticated gentlemen from the interior, and, very often on those who live in the city, and deem they are "posted." How one quarter of these "corner ornaments" manage to subsist is a mystery to us.

Judgment.—In the case of R. Meachan *vs.* Virginia Rogres Mining Company, judgment in the sum of two thousand dollars was rendered in favor of plaintiff—the same being made on the consent and approval of the attorney for the defendant.

Real Del Monte.

No very important movements have taken place in this company, during the past week. The Wide West mill has been engaged to do their crushing, while their own mill is under repair. Another shipment of $11,000 has been received here lately. This amount, no doubt, would have been much larger if it had not been for the many difficulties they have had to contend against during the past month. Mr. Brewster, the President, informs us that the mine is in a fine condition, with plenty of good rock, and all they require is time and to be let alone, so they can bring the mine back to its proper position. He further remarked that the stock is the cheapest to invest in, upon the market, at the present ridiculous rates. We have conversed with many heavy holders, who seem very sanguine regarding, the ultimate worth of the stock. We hope for the sake of all interested that their most sanguine hopes may be realized.

New Mining Map.—Mr. R. M. Evans has succeeded in completing a very handsome, accurate and valuable map, on quite an extensive scale, of Gold Hill, American Flat, and the Divide of Virginia. We have examined the map carefully and notice among other advantages it contains, that you can see (owing to the peculiar style of drawing) at a glance, the exact location of each claim. Its correctness is also vouched for by the best authority. There has evidently been much labor and care taken in the drawing of this map, and reflects much credit on Mr. Evans. H. H. Bancroft & Co., are the publishers.

Rather Severe.—At the late meeting of the Real del Monte stockholders, Mr. Gamble furiously and indignantly arose, and with much sarcasm remarked: "Yes, gentlemen, there is no doubt in your minds that I was very wrong in disposing of *my stock* at a profit; but I suppose you do not consider me wrong when *I loan you money* on it, and take the risk on the stock for its payment!" It seems to us that Mr. Gamble's head was rather sound and clear on that little financial point.

Stock Exchange Election.—At the election held by the Board of Brokers during the week, the following were the successful candidates:—Messrs. W. H. Culver, M. G. Elmore, J. C. McCreery, A. H. Murdock, Daniel Norcross, W. E. Moody, A. W. Snyder, G. W. Dent, R. O. Sturdivant, G. Johnson, Joseph Clough, L. A. Hinman. These gentlemen are to act in the capacity of Directors. Mr. G. W. Dent was afterwards chosen President and Mr. M. G. Elmore, Secretary. The fee of membership is now raised to $100, and $7.50 monthly dues.

Rush Continues.—The excitement for the Boise Mines continues as great as ever, and the cry of "Ho! for Boise," seems to be the order of the day. We wish these adventurers every possible luck; but do think that many of them will e'er long change their cry to "Ho! for Home." You need not laugh at our predictions, ye honest miners. It would not be the first case, in just such wild excitements, with the same glowing accounts and flattering prospects, you have cried "there is no place like home."

Uncle Sam G. and S. M. Co.—They are taking out still richer rock from this mine, and the latest accounts are of the most encouraging character; that is, as far as the wealth and condition of the mine is concerned; what their prospects are in matters of legality (for the company have many suits on hand) we are not able to say.

Not Correct.—The statement which has been published that Mr. Evans, late of the Wide West mine, has been appointed Superintendent of the Del Monte, according to the Aurora *Times*, is not altogether correct. Mr. Evans' position is to look after the mine, and superintend the work therein. Dr. Mitchell is the Superintendent of the affairs of the company.

North American.—We stated some time since that this stock was rating entirely too high in the market as there was nothing to warrant the prices it was then commanding. A great many brokers laughed at us, saying it was all "hosh." We then predicted that it was impossible for it to hold much longer at such preposterous rates. Our ideas (so it seems) have become true. The stock has "weakened" and lowered considerably and, what is more, will go much lower than even our present closing market quotations, *if they would allow* it to sell on its legitimate merit and intrinsic worth. Of course we would not be surprised to see it "bolstered" up again. A movement of that character is very probable, when you consider who are the high figure purchasers. We hear that another delightful assessment of only $25 per share has been levied, no doubt much to the pleasure of the stockholders who have, poor souls, hardly breathed free from their previous assessment. Rumor says that the company want this assessment to fight the "Uncle Sam" folks with. That's a consolation, surely.

Coal Creek Coal Mining Company.—This company held its regular annual meeting at its office in this city, on the 15th instant, and the following officers were elected for the ensuing year:—A. P. McCarty, President; P. T. Archambou, Vice President; D. S. Cutter, Secretary and Treasurer; J. D. Binns, Geo. H. Baker, and P. T. Archambou, Trustees. An assesment of 12½ cents was levied upon the shares of capital stock, payable to the secretary at his office. The secretary was authorized to enter into a contract with Geo. H. Baker, lithographer, to issue the stock immediately and all necessary arrangements were made for the immediate development of the mine. A drift has been run into the mountain on this claim some thirty feet which has developed one of the most promising beds of coal ever discovered upon the Pacific Coast. It consists of a very superior quality of cannel coal, equal to the best imported article.

Santa Catalina Island.—By the "Lizzie Adams," which arrived here on the 15th inst., from Santa Catalina Island, the consignees received about 50 tons of ore, averaging in value from $80 to $150 per ton. This ore is from the Munster lead. One hundred tons more of the same are now awaiting means of shipment to this port. The Catalina Consolidated Company have also 50 tons in transitu and other companies are also actively engaged in preparing for shipment in large quantities.

In our next issue we shall be enabled to give a detailed account of the extraordinary resources of this Island from most reliable sources.

Suit of the Grosch Co.—This important case between the Grosch Company and Ophir, was called up on the 14th inst., in the Twelfth District Court, when Mr. Comstock, one of the principal defendants in the suit, was held in default for his non-appearance. We have since been informed that Mr. Comstock is not in the city, having left here some time ago for the Boise Mines. The general impression is that he has failed to receive a notice stating the time set for the suit, and thus the cause for his not appearing.

California Patent Brick Making Co.—This company filed their articles of incorporation on the 17th inst., with the County Clerk. The object is to conduct the business of brick making in different sections of California. The capital is one hundred thousand dollars, divided into one hundred shares of one thousand dollars each. The trustees are Thos. W. Milford, P. Hudson, T. P. Church, C. B. Denio, G. B. Hudson.

In Luck.—It is stated that a certain broker in this city, who is a member of the First Stock and Exchange Board, made over ten thousand dollars in clear cash in one morning's transaction, on North Potosi stock. This is what we consider doing the thing handsomely.

WASHOE MINING ITEMS.

According to current reports in the Washoe papers, mining operations appear to be exceedingly active there at the present time; and with more encouraging prospects of abundant success than have ever been met with since the first discovery of silver in that region.

The important and extensive improvements now in progress upon the Ophir are elsewhere in our columns more particularly spoken of, as well as late and important developments in both this mine and the Gould & Curry. The Mexican Company are progressing finely with their shaft, which is to prospect the lead below their deepest level. They have already met with a large quantity of water.

The Latrobe Tunnel, which is the longest in the Territory, has recently struck water at a distance of 2,800 feet from its mouth. The consequence is that the Ophir and several other mines in the city are being effectually drained. The advantages of this system of drainage are almost incalculable to the mines affected by it. Heretofore the Ophir Company have found it almost impossible to drift west below their fifth level, on account of the great influx of water from that direction; now, however, the water appears to be fast sinking, and in a short time that part of the hill will no doubt be drained to a level with the tunnel.

The Savage and Potosi mining case is still before Judge North, in Chambers. Considerable interest is felt in the result of this important suit.

The Crown Point Company have now got their shaft down 250 feet, which is as deep as they intend to sink it at present. They will soon commence to run a drift from the shaft to the ledge. In a few weeks this will be added to the list of productive mines in Gold Hill District.

The Midas Consolidated Company is located a short distance southeast of the Midas works. They have a shaft down 185 feet, from which a drift has been run 100 feet to their ledge, which they found to be some 25 feet thick. After piercing the ledge they drifted upon it about 80 feet, and are still continuing the work.

The Irving Company, located in Six-mile Cañon, have recently had a large amount of rock crushed at Bassett's mill. According to the *Enterprise*, they obtained from average rock a yield of $33.44 per ton. From a place a little south of the main shaft, and at a depth greater than that from which the principal part of the rock was taken, ore was extracted which assayed $150 per ton. This is doing very well. The company are working night and day. The managers of the mine are sanguine that it will be a dividend-paying one by next July. This will be a pleasing fact, especially to one of the chief owners therein, who assures us that he has expended $19,000 for its development.

The Peerless Gold and Silver Mining Company have their shaft down to a depth of about 190 feet. At this distance the claim shows a well-defined ledge, about six feet in width. A recent mill test has been obtained, of some of the rock taken from the ledge, and the result is very flattering to the locators. The ledge was reached by means of an incline tunnel, and the rock is hoisted out by a horse power "whim." Arrangements have been perfected by the company with a San Francisco capitalist for the erection of a mill.

The Potosi mine continues to send to the mills a large amount of excellent ores.

The Gilmore tunnel, on American Flat, is now in to the distance of 307 feet.

The Mariposa mill, located in Cedar Ravine, and which has been idle for nearly a year, because the water by which it has been running was leased by the Water Company, has again resumed operations. It has twelve stamps and a rotary battery.

Work on the Bullion is progressing satisfactorily, as also on the Crœsus and most of the other claims in that vicinity.

Considerable activity is being displayed by the miners of Flowery District in the development of the various leads in that section. More work is at present being done than at any time since the spring of '60. A good many new locations are also being made.

AMERICAN FLAT.

American Flat still continues to attract a large share of attention. The Andes is a claim located on the hills west of American Flat, joining the Baltimore American on the north and the Victor Hugo on the south. The Johnson Company, who made the original location, to avoid litigation with the Andes, entered into a consolidation with the latter company, under the present name. It contains 800 feet, and like most of the mines in that vicinity, its development was commenced but a short time ago. The controlling interest is in the hands of men of capital, who seem determined to push forward the work with vigor. A shaft has been sunk to a depth of 30 feet, and some good indications discovered. The incessant labor spent upon the claims in this vicinity, and the money expended, shows the confidence owners entertain, that rich ledges will soon be struck, and their strong hope, that they may be the fortunate discoverers.

Our correspondent "Alpha," under date of March 12, writes us that "Prospecting is being carried on to a great extent on the American Flat, and new discoveries are being made daily. To name the many claims on which shafts are now being sunk, or into which tunnels are being run, would be almost an impossibility. I visited the Baltimore American tunnel a few days since. This company are at present in some 400 feet, and are driving west through a very hard porphyritic rock. The Superintendent, Mr. McElroy, informed me that they have been working three shifts, of eight hours each, and only advanced some twenty feet in a month! The very best of steel drills are often broken off, as though they were made of brittle wood. At a distance of 1,000 feet from the mouth of the tunnel, they passed through a sort of a bastard vein formation, bounded on the east and west by a well-defined wall, but the quartz does not carry the slightest indication of any mineral. They have not yet reached what is claimed the main ledge, and it yet remains to be seen whether this claim will prove good or not.

"Perhaps it would not be out of the way here to state that if the ledge that the Uncle Sam Company are on runs anywhere near the Baltimore American claim, it makes an angle of at least forty-five degrees; but it is claimed that there are three different and distinct ledges. The town of American City has already some 125 houses, and if it makes the rapid strides the next six months that it has during the previous two, it will be a formidable rival to the surrounding towns. As fast as I have a chance to visit the claims in this locality, I will keep you posted in their progress."

The Wind River Mines—More Discoveries.—Accounts are constantly reaching us of new mineral discoveries on the outskirts of those last previously announced. Having connected our discoveries on the south with the ancient workings of Mexico, and having pushed out eastward until we have reached the eastern base of the Rocky Mountains, where the mineral-bearing strata dips beneath the great Mississippi basin, our mines have nowhere else to go but northward along the great chain, which forms the backbone of the continent. It is along that track that we are now pushing on to form a connecting link with the gold fields of British Columbia. The discoveries in Idaho Territory and along the southern waters of the Snake river, in the Boise region, are now well known. Our hardy pioneers are still pushing on, and the last heard from them they were prospecting, and successfully too, the far-off Wind River mountains, upon the north waters of Snake river. A late number of the Portland (Oregon) *Times* states that Mr. F. J. Lawren had recently arrived in that city, and "reports that a valuable mineral district has been discovered about 300 miles above Boise, on the head-waters of Snake river. They are termed the Wind River mines, and they are most likely located in the spurs of the mountains bearing that name. A great many have gone from Boise and that vicinity, and have written back that the diggings are far richer than those of Boise ever were." The Walla Walla *Statesman* speaks of a considerable excitement about these new mines. Hundreds were leaving Boise for them.

Progress of Chemical Discovery.—Some seven or eight years since Dr. Hoffman exhibited before the British Royal Institution a bright glistening mass, which he stated was a new metal, and which he named "ammonium"—the metalic base of ammonia. This discovery was received at the time as a highly interesting fact, insomuch as it strengthened the views then and still entertained, respecting the constituents of all created things—the very atmosphere we breath not even excepted—viz, that all are metalic, and that the discoveries in chemical science will yet enable man to resolve all things to their metalic bases.

Mining Organizations.—The Colorado *Mining Journal* throws out the following very pertinent and suggestive ideas to its readers, which are most particularly applicable to this latitude also:—"A company with a working capital of $50,000, would soon be declaring good dividends, and the stock would inevitably advance far above par, and be eagerly sought. But when, with only the same basis on which to work, the capital stock is swelled to a million, or millions, no management in the world can prevent it from depreciating and finally becoming worthless. Of course, by the sale of the stock in the market, the getters-up of these schemes line their pockets, and that is the intention. Opening the mines of the country is entirely a secondary interest with them. Selling stock is their business. And the fleeced public, sooner or later, finds this to be as worthless as the paper on which they are printed. These operators know perfectly well that the mines cannot be made to pay dividends on such an enormous and chiefly fictitious capital, and they cease to look to them for it. They use the real merit of the country for their own purposes and their operations."

A Valuable Invention.—A gentleman named John Nester, according to the Virginia *Union*, is at present engaged by the Gould & Curry company in lining portions of their mill and mining works with metallic India-rubber weather strips. These strips vary from three-eighths to one-and-a-half inches in width, and are intended to render sliding doors and shutters air-tight, open or shut. The tops, bottoms, sides and centres of doors, windows and sky-lights of any description, when lined with these strips, are made impermeable to wind, rain, snow or dust. In many houses in this climate it is almost impossible to keep out the wind in winter, or the dust in summer, and if this invention has the virtues claimed for it, it will become invaluable. The manufactory is in New York City, from which an immense quantity of the article is shipped annually.

The Aurora *Times*, of March 7th, says:—"The Antelope's new mill is now running, reducing excellent ore. The Durand will soon commence, and we notice several companies are engaging the custom mills, and will keep them underway, all of which will add to our shipments of bullion. We are also pleased to learn that notwithstanding the dull times, a great amount of work is being done. The idlers go away, but the working men keep to their task, and it is evident they will never surrender."

Wealth of the United States.—A statistician computes the augmentation of the value of our real and personal property from 1791 to 1860, to be the almost fabulous sum of sixteen billions of dollars. Were wealth the only indication of national greatness and progress, the United States, in this respect, would scarcely have a rival; but the moral and intellectual status of a people is the only true criterion in judging of their condition, and in this respect we certainly compare favorably with any other nation.

Ulcerating Teeth.—The ulcerating process seldom commences unless the nerves have been destroyed. A tooth, being thus deprived of its vitality, becomes a foreign body, and frequently causes severe suffering. People are often prone to retain their loosened teeth for a long time, which is a great mistake. They should be extracted without delay. Those loosened teeth, upon being removed from the mouth, often emit a disgusting odor, showing the impropriety of retaining them a single day. Being loose, they cause but little pain in the extraction.

Washing Woolens.—If you do not wish to have white woolens shrink when washed, make a good suds of hard soap, and wash the flannels in it. Do not rub woolens like cotton cloth, but squeeze them between the hands or slightly pound them with a clothes pounder. The suds used should be strong, and the woolens should be rinsed in warm water. By rubbing flannels on a board and rinsing them in cold water, they soon become very thick.

Mineral salt is now brought in ballast from Russia; it sells for $20 a ton. It is mined in blocks that to the eye appear to be quartz. A thirty-pound block of it, placed in a box in a field, will supply a herd of cows for some weeks. It is as hard as stone. Ordinary salt would dissolve in one-fourth the time. No other country yet known yeilds this peculiar product. It is quarried precisely as we quarry marble.

Differences in Value of Bullion.—According to the Aurora *Times*, the bullion produced in Esmeralda is worth from four to six dollars to the ounce, while that from Virginia City assays but two dollars.

Mechanical Department.

IMPORTANT RAILWAY EXPERIMENTS.

Mr. Fell, an English mechanic, has recently invented and constructed a railroad locomotive, especially designed for ascending steep gradients. The principle adopted in the construction of this engine is that of obtaining increased adhesion without a corresponding increase of weight. This is effected by means of a central rail, and two horizontal wheels beneath the engine, so placed that in ascending a steep gradient the two horizontal wheels are made to press or closely hug this central rail, thereby producing the necessary friction required for making the ascent and descent with facility and safety. On level sections of the road, the ordinary wheels of the engine, only, are employed. A short section of road was constructed near Whately Bridge, London, having a gradient of 1 foot in 12, with a curve of 132 feet radius. The engine easily ascended the grade, dragging after it four heavily laden carriages, weighing about 26 tons, or about the average weight of 100 passengers. The speed attained was from 7½ to 12 miles an hour. So secure was the grip of the horizontal wheels, with the addition of the brakes attached to the several carriages, that they were stopped midway on the incline. The traction power of the engine, weighing 16 tons, was said, in consequence of its additional adhesive power, to be equal to any ordinary engine of 32 tons.

The experiments were made in December last. It is proposed to put this invention to a practical test, by connecting immediately, with a surface track, the French and Italian railway system now separated by Mont Cenis, where the great Mont Cenis tunnel is being cut, with the view of making the connection with an ordinary grade through the tunnel. The maximum grade for a surface road over Mont Cenis has been found not to exceed 1 foot in 12. Mr. Fell has proven that he can overcome this ascent, and a company of capitalists has been formed to make the connection. So we may expect to see France and Italy connected by rail, within two or three years, instead of waiting twelve or fifteen, as has heretofore been supposed necessary, for the completion of the great railway tunnel now in progress. Will the wonders of mechanical triumph never cease?

It is proposed to cover the more exposed portions of this road with a roof, to protect it from the heavy snows of these mountain regions, which rise 7,000 feet above the sea level. Portions of the present carriage road over these mountains are even now thus covered. It will be recollected by many of our readers that Mr. Joseph Mosheimer, formerly of this city, but now a resident of London, proposed, some years ago, to protect the proposed railroad over the Sierra Nevada in the same manner; but his proposition was received with considerable ridicule. The plan appears, however, to work, and, no doubt, to pay well, in the Alps; why not in the Sierra?

THE USE OF CAST STEEL.

The employment of cast steel seems to be rapidly on the increase, and the assertion is ventured that but a few years will elapse ere the principal forgings of our mercantile and war steamers will be formed of it. Its economy for employment in railroad use has been thoroughly demonstrated; and for steam boilers, the experiments noticed in our last issue appear to be most conclusive and complete. Cast steel is perfectly homogeneous, and when it is partially decarbonized, so as to admit of its being bent cold, it can be readily shaped into the most difficult forgings. In that condition its tensile strength is more than double that of the best iron usually employed for such purposes. Moreover, there is not only an increase of strength gained, but a decrease of weight is also secured. Experiments go to show that the saving in the use of cast steel for rails is very large. The best iron rails laminate and split after a very short wear, especially if subjected to heavy loads. Their tendency to this description of wear is fully illustrated by the rails on the Market street railroad, in this city, say especially between Kearny and Battery streets. In many cases, on sections of roads where they are subjected to a heavy and constant service, the rails have been worn out in two years' service.

Cast steel does not laminate or split, and the experience on the English roads, where it has been used for several years, is, that it will out-wear iron in the ratio of six or seven to one, when it is rightly adapted to the purpose, while its first cost is but double that of the best iron. The English roads are very generally adopting cast steel for both rail and tyre.

Communication.

Mr. Editor:—As I am one of that unfortunate class of individuals who don't know everything, and yet have a great desire to know something, I feel quite elated at the prospect of adding somewhat to my scanty store by enquiring of your Sacramento correspondent, "E. A. M." There are doubtless many who could answer my question if they would; but people, generally, are either quite too much occupied with their own business to find time to look after the affairs of others, or they are too modest to push themselves forward as public instructors. Hence my joy at finding one who will doubtless take pleasure in imparting valuable information for the benefit of others.

In order to save your correspondent unnecessary trouble, I will endeavor to confine my enquiries to matters strictly practical, and avoid pushing them into scientific theories. The latter class of information I can always obtain by virtue of being a subscriber to the Mechanics' Institute of this city. Although the library of this Association comprises some 3,000 volumes, still it does not contain *all* the knowledge in the world, hence it is that I shall take the liberty to place myself under obligation to "E. A. M.," aforesaid, by soliciting information of him upon subjects as follows:—

Take one of the engines and boilers, with the necessary adjuncts, now in common use in Washoe, and beginning at the furnace—allow me here to remark, that for the sake of clearness and to avoid intricate calculations, I shall make no use of fractions, or even exact quantities, as found by careful experiments; using figures and quantities merely to illustrate principles,—the burning of one pound of coal requires 200 cubic feet of air, the temperature of which before entering the furnace is, say zero; on leaving the chimney it is 1,000°, or in other words it contains as much caloric as is contained in an equal weight of water, when heated to the boiling point. Now I would ask—Is it beyond the ingenuity of man to contrive means by which a portion of that heat may be utilized, instead of allowing its free escape, as at present?

Again, as chemically considered, but little over one-half that amount of air is required for the combustion of the given amount of coal, is it beyond the ingenuity of man to improve on the best furnaces now in use, so as to reduce the amount of surplus air now required to pass through them, with no other effect than that of carrying off and wasting heat at the rate above indicated. If such improvement is possible, would it have the effect of saving fuel?

If the temperature of the feed water of a boiler could, by any contrivance, be raised to the boiling point before entering the boiler over the furnace, by heat derived from the hot air escaping from the smoke stack or from waste steam, would not such heating effect the saving of so much heat from the furnace, which, in turn, would effect a saving of coal?

And again, as there appears to be a vast difference in the conducting power of different materials, in the readiness with which they absorb heat from one body, conduct it through themselves and transmit it to another; and as the conducting power of most substances is found to depend greatly on their formation or shape of body, their color and their structure of fiber, is it not just barely possible that something may be found more suitable for boilers and flues than rolled iron? Perhaps I ought not to have asked this question, as in the same number of the Press in which the communication of "E. A. M." appears, he will find the record of an elaborate series of experiments on the economy of steel over soft rolled iron as a material for boilers. From these experiments, derived from high mechanical authority, your correspondent will find a gain, in the generating, equal to *twenty-five* per cent.

Your correspondent informs us that motion is heat, and that heat is motion; or in other words, as I understand him, the two are naturally convertible, the one into the other, being in fact only different manifestations of the same thing; and that it is unlimited in extent and quantity, pervading and being contained in all things, and that it is excited to activity in one or the other shape by light or electricity and magnetism.

Now the manner or way to convert motion into power and power into motion, as circumstances may require, is pretty well understood by machinists; does it not follow, by the same course of reasoning, that power is only another manifestation of the same thing, and is convertible into either heat or motion, and therefore *is* heat or motion? This being acknowledged, and light and electricity being the most abundant elements in nature, what is to prevent an ingenious inventor, by following out the ideas of "E. A. M.," to produce an engine which shall be driven by sunshine, or even—moonshine! That last word has given me an idea, but as I have strong prejudices against moonshine, or anything else that may reflect on a benighted neighbor, I will drop the subject, hoping that it may be fully illuminated by the strong sunshine rays of your Sacramento correspondent. Yours, An Enquirer.

Extensive Iron Works.—One of the most extensive iron work establishment in the world is that of Cammell & Co., of the Cyclops Works, Sheffield, England. In 1844 their works covered a little over an acre of ground; now more than 32 acres are covered by their various works, employing from 2,000 to 3,000 workmen. No less than 345,000 pounds (about 167 tons) of railway springs have been produced in one week at this establishment; whilst ordnance of cast steel of the largest caliber, cast steel shot and shell, cast steel rails, bars and forgings, of every description, and cast steel files, all fall within the scope of their everyday employment. They have eight large rolling mills, by which they are enabled to produce armor-plates of the most approved quality, *up to forty feet in length and twelve inches in thickness;* and whilst they formerly considered an ingot of cast steel weighing 600 or 700 weight a heavy job, they are now daily sending out ingots of as many tons, and are even preparing to make ingots of forty tons weight. This firm has succeeded in producing armor-plates superior to any other establishment, and which upon recent trial have successfully withstood the severest tests demanded by the Admiralty. English armor-plates are arranged into eight orders of merit, of which those from the Cyclops Works are marked "A 1;" the lowest being "B 4." This establishment is more particularly known in the United States, among railroad men, for their manufacture of springs of a superior quality.

Immense Casting.—The largest casting ever made in Baltimore was poured at the Vulcan Works of Halzehurst & Co., on Saturday, February 6th. It is a condenser for one of the large steam frigates now in process of construction. It weighs 26 tuns or 52,000 pounds. A large pit was required, into which all the moulds were made, requiring a preparation of nearly three months. The whole was most successfully done, and was witnessed by a considerable number of persons. Several days will be required to cool it off sufficiently for removal.

Glass bushes or steps are being used for bearings for shafts, to some extent, in England; the glass being protected at the ends by metal flanges attached to the pedestals with papier maché or India-rubber interposed.

The incline of the Bohore Ghant range, recently completed, is one of the most remarkable achievements of railway engineering in East India. The incline is nearly 16 miles long, with a total rise of 1831 feet, the two steepest gradients being 1 in 37 feet, and 1 in 40. It includes 25 tunnels and 8 viaducts, and has occupied seven years in construction.

Patent Department.

ANOTHER IMPORTANT CALIFORNIA INVENTION.—Mr. George F. Russell, of this city, a practical printer, and who has long made machine presses a speciality, has invented, and constructed the model, of a printing press, which bids fair to entirely supercede the "Hoe press," or any other similar invention which has been introduced on either side of the Atlantic. The preliminary papers for securing a patent for the same, both in this country and in Europe, have been prepared at the MINING AND SCIENTIFIC PRESS PATENT AGENCY, and have been taken East, with the model, by Mr. Russell himself, who left on Monday last in the America. The invention has been submitted to quite a number of practical printers in this city, and to one practical machine press builder, all of whom unite in the opinion that the "Automatic Printing Press," as it is to be called, must be a complete success. It is perfectly simple in its operation, and in feeding from a continuous sheet, upon a horizontal cylinder, the inventor has been able to do away with all irregular motions, nippers, etc., which greatly retard the speed and complicate the movements of all other machine presses in use. Every motion connected with this press is circular and continuous. It cuts, folds and delivers the sheets as fast as printed, all by continuous motions. So simple is its construction that an experienced machinist and press builder has expressed the opinion that it can be built for about one-third the cost of a Hoe press of the same size, while it will be able to turn off twice or three times the amount of work, and with much less danger of breakage or wear and tear. Its simplicity is at once apparent, and forms its most striking feature; and it appears almost self-evident that it cannot fail to accomplish in full the truly wonderful results claimed for it. Should the hopes and confident anticipations of its inventor and his friends be realized, our Golden State will have just reason to take pride in claiming it as a California invention.

PRUNING HOOK—*A California Invention.*—Mr. Thos. W. Paine, of Grass Valley, Nevada county, has made application through the MINING AND SCIENTIFIC PRESS Patent Agency, for a patent for an improved pruning hook, which will be found, on examination to be a great improvement over anything of the kind heretofore used. This improvement consists in drawing a hooked knife down and across the blade of a stationary chisel. The chisel is placed on the end of a pole of any desired length, from three or four to ten or 15 feet. The hooked knife is placed directly over it, and after taking hold of the limb is drawn down upon the chisel blade by a rod attached to the pole and easily worked with a convenient lever. A limb half an inch or more in diameter may thus be cut off ten or fifteen feet above the ground, quite as smoothly as it can be done by any of the ordinary pruning knives when used under the most convenient circumstances. This invention must prove of great convenience to nurserymen, and cannot fail to come into general use.

A NEW GOLD SEPARATOR.—Some weeks since we made an extended notice of Hunter's Grain Separator, a very superior machine for that purpose. Since that time Mr. Hunter has been experimenting to produce a machine for separating gold from the dry sand, in localities where water is not attainable. By certain additions and modifications to his grain separator, he has succeeded in producing a machine which accomplishes the desired work to apparent perfection. Such a machine must be of much value in many localities. To all appearances it is capable of doing quite as much work as an ordinary "long tom," and for aught that we can see, it may do it quite as effectually.

A FRENCHMAN has invented a way of pulverizing slate, and then mixing it with some substance by which it is converted into a very hard and durable material for building purposes.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a nature. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law;

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every caveat.....	10
On every application for a patent.....	15
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief.....	20
On every appeal to the Judges of Circuit Court, D. C.....	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appellant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. H. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. H. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers. ☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Will be Discontinued.—After this date subscriptions not paid for in advance will be discontinued. As soon as possible bills will be presented for all arrearages. Parties who receive a paper from the office of delivery cannot evade the LAW requiring payment for the same. We shall in future keep no continued accounts with subscribers, and the subscriptions of ALL friends and patrons will be treated alike.

San Francisco:

Saturday Morning, March 19, 1864.

THE KILLING OF REV. MR. SMEATHMAN.—The daily papers have already given the particulars of the killing of Rev. H. O. G. Smeathman, by the Indians, some sixty miles north of Surprise Valley, in Nevada Territory. Mr. S. was one of the pioneers of Reese River, and was much respected wherever known. The people of Reese River appear to be much exasperated at this unprovoked and wanton act of the Indians, and the indications are that dire vengeance will be meeted out to the red-skinned villains. We have enjoyed the pleasure of Mr. Smeathman's acquaintance for some four or five years, and knew him to be one of the kindest and gentlest of men, and one who would have suffered almost anything rather than have wronged any human being. The testimony of his two companions who escaped, fully attest this fact, and they moreover speak most highly of his brave, noble and christian bearing in the hour of danger and of death. Mr. S. leaves a widow and two step-daughters who reside in this city—one now temporarily absent in Washoe. He visited his family some six months since, at which time we had the pleasure of several interviews with him and received his promise as an "occasional contributor" to the *Mining and Scientific Press*. He has since fulfilled that promise, his latest contribution being published over his proper initials in the number of February 27, giving an interesting account of "Surprise Valley," near where he met his untimely end. He has done more, perhaps, than any other one man, through his contributions to the *Press*, to bring into notice and to convey to the public a correct idea of the topography and resources of the interesting region which he had adopted for his home. He was a man of close observation and a good writer. We were in daily expectation of hearing from him again, when the announcement came that he had been thus ruthlessly struck down. Friends had gone out to obtain his body and give it a christian burial. Green wave the grass o'er his desert grave.

BULLION FROM WASHOE.—The amount of bullion shipped by Wells, Fargo & Co., from Virginia City for the week ending March 12th was $194,802.

MINING SHARE MARKET.

The Mining Share Market has manifested very little animation during the past week, and we have no feature of special interest to notice. The sales of the week amount to $1,567,009,00.

Ophir has improved somewhat during the past week, closing at $1,675, buyer 30 days. Recent accounts from this mine are of a very encouraging character.

Gould & Curry still remains inactive. It closed at $4,665. Savage is but little sought after. It has found buyers at $2,525.

Yellow Jacket may be quoted at $1,100; Uncle Sam $780; Imperial $157½ buyer 30 days; Crown Point, segregated, $750. Chollar has still farther declined with small sales. Opening at $325 on Saturday, it commenced the present week at $322½ from which figure it gradually declined to $300.

Lady Bryan has constituted the chief feature of the week. The mine has again changed hands—5,690 shares having been sold the past week, (total number of shares 5,000.) Opening at about the closing figures of the previous week—$52, it found sellers at yesterday morning's Board at $39, but rallied in the evening, and closed at $45 cash, $49 buyer 30. Efforts are being made to reduce the number of shares in this stock. An adjourned meeting for that purpose will be held on the fourth of April.

Daney shares opened at $155 @ 170, but gradually declined with large sales, to $105 @ 106 at yesterday's Board. This important decline is mainly attributable to the fact that the mine has been flooded with water, which it will require some weeks to remove.

North Potosi shares, owing to an unfounded rumor that an adverse decision had been rendered in its suit with the Savage, suddenly tumbled from $110 on Monday to $35 on Tuesday; it subsequently recovered somewhat and closed yesterday, at $46. It is understood that the decision in this case will be rendered on the 26th instant.

North American has been very active, but at generally declining rates; the decline has been caused by the reported levying of another assessment of $25 per share.

Harmon has become comparatively quiet at from $35 @ 37; Moss is quoted at $35; Lafayette from $13 @ 15; Uncle Sam (F. D.,) $5; Central America $5.

Nevada (J. G.) has declined somewhat from its late advance, and may now be quoted at $215; Sierra Nevada has been heard from at $75; Best & Belcher a $750.

Real del Monte has been less active, opening the week at $54@58, it gradually declined to $45, at last evening's board. No special movements in the affairs of this company have been noticed during the past week.

Antelope still maintains its regular standing at $225; Wide West found a buyer yesterday at $22½; an important improvement is reported at this mine; Silver Hill may be quoted at $10.

De Soto, Humboldt, is enquired after at from $45 @52. Since this company has struck the Sheba lode, much confidence appears to be felt that it will soon be developed into a valuable mine.

Cicero, Reese River, has found buyers the past week at from 50@55.

Of copper stocks we may quote the Napoleon firm at $65, holders at $70@80. Table Mountain, copper, $13; Diamond $9.

DANEY G. & S. M. CO.—This stock has fallen considerably in the market, owing to the fact that their shaft is full of water, and likely to continue so for some weeks to come.

SILVER BULLION.—During the week ending March 6th, Wells, Fargo & Co. shipped from Virginia City silver bullion valued at $245,788.

WHAT SCIENCE SAVES IN MINING.—It is well established that but a fraction of gold can be saved by the fixtures and arrangements in the crushing mills hitherto used at the mines, a large portion being swept off and lost in the tailings (chaff or refuse); this portion is found by assay at the works of the Colorado Gold Mining Company to have been on an average sixty-five per cent., and it is now a well established fact, verified by successful experiments, that when these "tailings" are worked over in the Desulphurizing and Amalgamating apparatus (machines and fixtures recently invented and which have just been put in operation by the company above mentioned) nearly all the gold contained in the ore can be saved. Of course the mills equipped with this apparatus will save double the amount they have previously done.—*Boston Com. Bulletin.*

The above item which is just now going the rounds of both the California and Atlantic press, may be, and doubtless is, true of the Colorado, mines; but not of the mines of California. The principal portion of the gold in the Colorado mines is found in a sulphuret of iron, or iron pyrites, which sulphuret constitutes, in many mines, nearly the entire body of the vein, and in most of them, if we are rightly informed, a very large proportion. In our California mines the sulphuret of iron constitutes but an exceedingly small proportion, generally not more than two or three per cent., rarely exceeding, or even reaching, six or eight per cent. The chief part of the gold in the California mines is found imbeded in the quartz from which it is very readily freed by the mere mechanical operation of stamping and amalgamating. The sulphurets in the quartz veins of this State are sometimes collected from the sands and subjected to a chemical treatment, or "desulphurizing process," similar in its results to the process above alluded to, and now being introduced into Colorado.

REESE RIVER. The *Reveille* still continues to give favorable accounts from that section of the mines. That paper states that several rich discoveries have recently been made on Skull Creek, near Grass Valley. A fine sample of which was exhibited from a ranch in Grass Valley.

The Perseverance Company, Warner and Wells ledge, had six tons of their surface ore worked at the California mill, which produced bullion of the value of $1645, or about $275 per ton. The cost of crushing, after being delivered at the mill was $75 per ton. The editor thinks this yield a pretty good evidence of the richness of the Reese River mines. We should think that *any* rock that would pay for crushing, at such rates, might be called rich.

IMPORTANT DISCOVERY.—A large and exceedingly rich salt mine has been discovered in Smoky Valley, a few miles south of the sink of Big Smoky Creek. This discovery is an important one to the miners of Bunker Hill and other districts lying upon the border of the valley as well as to those of this place, as the quantity is limited and its location convenient.

Messrs. Miller & Lundbom, assayers, had melted during the week since the 3d instant, $3,000. An assay made by this firm of rock from the Smith & Martin ledge, yielded at the rate of $7,071.88 per ton.

OPHIR IMPROVEMENTS.—We learn from the Virginia *Union* that the work upon the new Ophir shaft which is now being sunk, and intended to be used as the main shaft of the mine, is progressing finely. It is said to be far the most substantial work of the kind on the continent. The size of the shaft before timbering is twelve by fourteen feet, after timbering it is nine by twelve feet in the clear. The timbering is the most permanent and substantial that has ever been undertaken in the country. It is so firmly braced and bolted, that no swelling or pressure of the surrounding rock can ever injure it. It is now down 75 feet, and will be continued, in the same manner to a depth of 700 feet, as rapidly as the work can be pushed ahead. A 500-horse power engine will be placed at its mouth to perform the duty of lifting and pumping. The works of this mine are now under most able and energetic management.

Copper as an Investment.—A Campbell, Esq., one of the editors of the Lake Superior *News and Journal*, writing to his paper from the city of New York, and speaking of copper mining says:—

"We venture the assertion that there is no stock in the world either so safe or remunerative as copper stocks. Bank, Railroad, State and National stocks, except the inflation of speculation, have a standard value based upon the dividends they will surely pay, or from six to ten percentum yearly, but in copper, if the ground is certainly known to be rich and abundant, averaging from two and a half to five per cent. of stamp work, the capitalist who buys from one to five thousand shares of its stock at $10 or $15 or $20 per share, and then invests from $3 to $5 more per share in the form of assessments to open and work the mine is sure to have a stock worth from $50 to $100, a result that warrants the investment.

The stocks of the mines upon the south range of the Ontonagon district are very firmly held and constantly advancing, and we shall be much disappointed if most of the mines upon it do not, in an incredibly short time, rival the very best now on the lake, they certainly will if the stockholders shell out their money, upon their ground, and put up sufficient mills and machinery."

The above is written after an experience of some fifteen years of copper mining at Lake Superior. It will be noticed that two and a half to five per cent. yield of "stamp work," or what we in California would call second class ore, from which the shipping ore has been selected, is there considered a remunerative class of ore; and that a mine producing such an ore must soon, by proper development, reach a high figure in value.

As an evidence of the value placed upon Lake Superior copper stocks we may note a late transaction which occurred at the Rooms of the Fourth Street Board of Trade, in the city of Pittsburg. The property and effects of the Adventure Mining Company, located in the county of Ontonagon, Michigan (Lake Superior) was sold at the above mentioned Board, on the 19th of January last for $110,000, one fourth cash.

Work on the Aquila — Comanche — The work of raising the materials of the Comanche is progressing finely. The main portion of the engines and nearly all the finished iron work has been raised, and thoroughly cleansed, being to all appearances in as good order as before its submergence. The principal part of the heavy castings, with the exception of the guns have also been raised. Upwards of one-half of the entire cargo has now been landed.

The Blessed Rain came pouring down upon us yesterday in torrents. Never before was it more thankfully and joyfully received in this city. We are hopeful that the mountains and valleys have received an abundance.

Amador, Reese River.—This town, it is said, is growing rapidly, and would be considered a wonder if it were three years instead of three months old. All visitors to this district go first to examine the famous Amador ledge. Active operations are in progress upon several extensions. Just beyond the town of Amador is a place called Forty-nine Hill, which is beginning to attract some attention. There are several claims there which assay well. The Aspinwall and Bigelow companies are especially spoken of as promising and eligibly situated for working. A tunnel, started at the foot of the hill, would strike them 400 or 500 feet from the outcrop; and if the ledge continues in richness as they go down, they must soon become very valuable. They are both very heavy as well as rich at the surface; the ore, though silver, much resembling in brilliancy of color "peacock ore" of copper. A working test in San Francisco has fully proved the richness of the ore. The proprietors are working on quietly, making no noise, but satisfied they have a "good thing," sure.

Washoe Coal.—The Territorial *Enterprise* of the 13th inst. contains the following:—

Eds. Enterprise:—We have, as was reported in Friday's issue of your paper, purchased 2,500 lbs. of the El Dorado coal, and to our surprise, find it as good coal as we wish to use, both for heating our boilers and kiln drying purposes. We are constantly using the coal and intend to continue to use it, and those interested may satisfy themselves by calling at our establishment. We feel proud of being the first to prove the value of the coal of that region. Yours, Klein & Knob, Silver City Brewery.

Another College for San Francisco.—We learn from the *Evangel*, the Baptist organ of this city, that active steps are already being taken for the establishment of a college in this city, to be under the direction of that growing religious denomination. They have done well to select this city for its location. The Methodists at Santa Clara, the Congregationalists at Oakland, the Catholics in this city, already have their denominational colleges; why not the Baptists? There is room and need for all.

When chipping wrought-iron the chisel should be dipped in greasy waste occasionally; the labor is much reduced thereby.

A New Mining Law.—The Nevada Territorial Legislature, at its late session, passed a law entitled "An Act for the Encouragement of Mining," approved February 20, 1864. The Virginia *Union* comments upon the same as follows:—

It is an act which the mining community have long stood very much in need of. It provides that shareholders in mining claims which are unincorporated, can be sold out of the claim when they refuse to pay their proportion of the expense of improvements made on the mine by the direction of owners, representing a majority of interest. It has been common for owners in mining claims to neglect, or refuse to pay, their just and proportionate share of the expense of prospecting them, because they have reason to feel confident that their co-owners will not go to the trouble and expense of compelling payment, even where it can legally be done, and when companies are incorporating, it has been a common thing for some of the owners in the claim to refuse to sign the deed of trust, so that they can avoid the payment of assessments and not get sold out. And another similar case often occurs. It is common for men when they go to new mining districts, to locate claims for themselves and friends in the same company, and it is too frequently the case that the friend ungratefully refuses to either sign over the interest he has thus acquired to some person who would willingly take it, and pay assessments on it etc. The active miners of this State have long needed such a law.

Trustees of Mining Incorporations.—An act to authorize Mining Corporations to increase or diminish the number of their Trustees has been introduced in the Senate. It takes two thirds of all the stockholders to do it; certificate must be filed in the office of Secretary of State, and County Clerk; *provided*, that the number of Trustees shall not be diminished to less than three. It shall be the duty of the Trustees, after the filing of such certificate, to call a general meeting of the stockholders for the purpose of electing Trustees.

A Remarkable Indian Tradition.

The following remarkable Indian Tradition was first published in an Exchange some eight or ten years since, with an editorial assurance that the facts embodied were derived from a perfectly reliable source. Among the old men of the Indian Tribes who until recently lived in the vicinity of San Francisco Bay, were preserved legendary tales of their forefathers' achievements, and still the facts embraced in the sketch below live in recollection. It is said of these Indians, that there are those who have welcomed their parents' return from hostile excursions into the country lying near Monterey, by a route along the sea coast, passing over a country since submerged, and where the opening of the bay of San Francisco now lies. By its perusal the reader will derive new light concerning the geographical structure of California and the changes she *may* have undergone within a very brief period of time.

THE LAKE OF CALIFORNIA—AN INDIAN TRADITION.

The aborigines of California, like those of every other portion of America, have long been fading away before the progressive march of civilization, or mixing with the Spaniards who conquered them two centuries ago, have lost their identity as aboriginies. Like their eastern brethren they are leaving their ancient hunting grounds, the homes and sepulchres of their fathers, and wandering they hardly know where, while the white man, as by right divine, takes and calls their lands his own. But still they have their legends and their traditions, and even now they gather around their broken council fires—a mockery of palmier days—and tell, the fathers to their sons, the tales of former times, which their forefathers had told them.

Among the traditions current among them is the following which is certainly full of interest. They relate that where the Bay of San Francisco now is, was formerly a great lake longer and broader and deeper than the bay. According to their accounts this lake was more than three hundred miles in length, with no outlet to the ocean except in the rainy season, when it would overflow its banks and a small stream would flow to the ocean some thirty miles south of the present outlet to the Bay.

The ridge of hills along the coast was then unbroken and served as a dyke to prevent the waters of the lake from escaping to the ocean. The level of the lake was many feet above that of the ocean, and its waters extended far up to what is known as the Sacramento valley, and southward covering the valley of the San Joaquin.

On the banks of this lake, centuries ago, populous tribes of Indians dwelt, whose villages lined its shores. Indeed, if credence is to be given to the tales of the Indians, the population of California will never equal those ancient days, when the red men fished in the fresh waters of the lake, and hunted their deer undisturbed through the forests.

The hills along the coast are formed of soft sandstone, and through this, the tradition relates, the water began to make a breach, which yearly grew wider, until it burst through and among the hills with tremendous power, leaving steep cliffs and precipices to mark its way. And what was once a lake several hundred miles in length, is now a bay not forty miles long. This may have been the cause for such a change, but it would seem far more reasonable to attribute it to some volcanic commotion which in those days might have been as prevalent there as they are now in Mexico and Central America.

How far this tradition can be corroborated, must be determined by those who have the means. But no one who has wituessed the steep bluffs aronnd San Francisco, or has passed the singular entrance of the Bay, called the Golden Gate, with its perpendicular walls, or has seen the no less singular bluffs of Raccoon Straights, a few miles north of San Francisco, can for a moment doubt but that they were formed by some powerful agency, either fire or water.

On the hills around San Francisco fresh water shells are found, and the small island of Yerba Buena, which lies directly opposite the town, rising out of the Bay at least one hundred feet, is completely covered with shells, which facts go far to prove the truth of that tradition, which has no doubt been handed down from former generations as marking an era no less important in Indian tradition than the deluge is in sacred history. This event may have taken place a thousand years or even twenty centuries ago, as the traditions afford no data as to when it occurred. It is a subject well worthy of study, and which may throw some light as to the origin of the gold dust, and the manner of its distribution over so large a tract of country.

SPECIFIC GRAVITY.—Hiero, king of Syracuse, who reigned in the fifth century, having furnished a workman with a quantity of gold for making a crown, suspected that he had been cheated, and that the workman had used a greater alloy of silver than was necessary in the manufacture of it; he therefore applied to Archimedes for a detection of the fraud. This celebrated mathematician was led by chance to a method of detecting the imposture, and of determining precisely the quantities of gold and silver of which the crown was composed. While he was bathing in a tub of cold water, he observed that, as he immersed his body in it, the water ran out, and he immediately concluded that, supposing the tub full, the water which ran out when his whole body was immersed, was equal in bulk to his body. Archimedes was so pleased with this discovery as to run about the streets, exclaiming, "I have found it!" Others affirm that he offered a hecatomb to Jupiter for having inspired him with the thought. The principle having thus suggested itself to Archimedes, he procured a ball of gold and another of silver, exactly of the same weight as the crown, considering that if the crown were altogether either of gold or silver, the balls of gold or silver would be of the same bulk, and consequently, when immersed in water, would raise it just as high as the crown would if immersed. And if, on the contrary, the crown was of gold and silver mixed in a certain proportion, this proportion would be discovered by the hight to which the crown would raise the water, higher than the gold ball, or lower than the silver ball.

EXPLOSION IN A COAL MINE IN VIRGINIA.—Our readers will recollect the account we gave, some time since, of an explosion in a coal mine at the Buttes, near Marysville, and the explanation we subsequently gave of it in one of our articles on "Ventilation of Mines." Our attention has since been called to a similar accident in a coal mine in the State of Virginia. The terrific nature of the Virginia explosion may well be imagined from the sheet of flame from the mouth of the pit. The occurrence is described as follows:—"The explosion which was caused by the ignition of gas, occurred in Raccoon Pit, near Clover Hill, worked by the Chesterfield Coal and Iron Mining Company, resulting in the death, by wounds and suffocation, of sixteen workmen, a number of others being also wounded, three fatally. Mr. Bertram, the overseer, was killed. All the bodies were recovered. The explosion was succeeded by a sheet of flame ascending several hundred feet above the mouth of the pit. The damage done to the pit must have been serious."

THE PAST WINTER.—It is an astonishing fact, says an exchange, that the Rocky Mountains should have been the dividing line for the weather and storms. East of those mountains the winter has been exceedingly cold and the fall of snow very great. West of that ridge there has been, we believe, only one snow-storm which reached Salt Lake, while in California and Nevada Territory the fall of snow and rain has been lighter than in any winter since 1850.

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent men need apply.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

The Law for Publishing Legal Mining Notices.

An utterly erroneous opinion having been engendered in the minds of some (through misrepresentations and interested motives of others), that the laws of this State technically require the publication of mining notices to be be made in a DAILY paper, we take occasion to quote the following positive passage concerning the publication of mining notices, from the latest statutes passed by our Legislature on the subject, March 5th, 1861, which has not since been altered or amended:—

"Notice of each such call, or assessment, shall be given to the respective stockholders personally, or shall be published once a week for at least four weeks in some newspaper published at the point designated as the principal place of business of the corporation, and also in some newspaper published nearest to the point where said mining operations are being carried on. If, after such notice has been given, any stockholder shall make default in the payment of such call, or assessment, as to the shares of stock held by him, so many of such shares may be sold as will be necessary for the payment of the call, or assessment, on the shares held by him. The sale of said shares shall be made as prescribed in the by-laws of the company; *provided*, that no sale shall be made except at public auction to the highest bidder, after a published notice of thirty days, PUBLISHED AS ABOVE DIRECTED; and that at such sale the person who will agree to pay the call, or assessment, so due, together with the expense of advertisement and the other expenses of the sale for the smallest number of whole shares, shall be deemed the highest bidder."—[Passed March 5th, 1861—Stat. 1861, p. 14.

The above is indeed plain, and we hold ourselves responsible for the assertion that a weekly issue of a mining notice is as valid as that of a daily. By publication in the MINING AND SCIENTIFIC PRESS, a wide circulation is given to notices, particularly among miners and shareholders in this city and throughout the State and Nevada Territory. A weekly publication is also secured at a material saving in cost to shareholders.

No. 11—MARCH 12.—Earthquakes—Their Causes and Effects; Ventilation of Mines; Communications—The Great Desert and Its Mines, No. 2; San Luis Obispo; Virginia City—Her Mines, Growth and Future Prospects; Jordan Creek; Churchill Mines; About Cloves; Mechanical Department—Railroad Switches and Signals, Steam and Electro-Magnetic Power, Steel Boilers; Remarkable Instance; Patent Department—Improvement on the Arastra, New Amalgamator; Mining Gossip; Reese River—A Comparative Review of Various Districts; The Mining Share Market; Editorials; Incorporations; Full Reports for the week of the San Francisco Stock Market; Washoe Stock Report; Chippings; Etc.

NO GOLD MINES IN UTAH.—The *Deseret News* of March 2d contradicts the report heretofore circulated, in regard to the discovery of rich gold mines in Utah Territory. It says there are no gold or silver mines there, and that persons who go there for the purpose of digging for gold, had better take plenty of gold and provisions with them. Other wise they will be liable to suffer and starve.

Record of New Incorporations

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Golden Wedge G. & S. M. Co., Mono county; W. B. King, T. H. Soper, J. Minn, T. C. Soper, R. J. Morrison.

Whitworth M. Co., El Dorado county, Cal.; James W. Cullen, G. W. Kluney, G. W. Paget, John E. Kincaid, Benj. Dore.

Fortune S. M. Co., Lander county, N. T.; R. Chenery, A. D. Meacham, B. W. Hathaway, S. Wenbain, John F. Cassell.

Cortez-American S. M. Co., Lander county, N. T.; R. Chenery, A. D. Meacham, B. W. Hathaway, S. Wenbain, S. T. King.

Mendocino G. & S. M. Co. No. 1, Amador county; Thomas Brown, John Agrell, James Wilson, T. W. Leggett, E. H. Errickson.

Yosemite Consolidated M. Co., Lander county, N. T.; P. Brandon, W. M. Siddons, John Conner, Robert Stuart, R. L. Bampton.

Eyla G. & S. M. Co., Lander county, N. T., Christian Rees, A. L. Barnes, L. Archer.

Cameron M. Co., Humboldt county, N. T.; Edward Woodruff, I. Cullman, James T. Boyd.

Gendale Consolidated G. & S. M. Co., Lander county, N. T.; J. D. P. Teller, A. P. Cox, G. B. Merrill, James E. Rowe, A. J. Kensey.

Yellow Monster G. & S. M. Co., Tulare county, Cal.; A. Wiugard, E. C. McComb, R. H. Waller, Jacob Browning, S. H. Squire.

Monte Cristo Copper M. Co., Chimawavo. Cal.; S. A. Hall, A. J. Chase, G. B. Bryant, Calch Fay.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Fair Play G. & S. M. Co., Indian Spring district; Samuel J. Eddy, Wm. E. Beauchamp, A. W. Coleman.

Nevada G., S. & C. M. Co.; Isaac R. Wells, John McDonnell, L. W. Barber.

Winamack G., S, & C. M. Co.; Same as above.

Gross Lambert G. & S. M. Co., Indian Spring district; W. McKay, F. L. Grosvenor, C. A. Witherell, G. W. Hancock.

Superior G. & S. M. & M. Co.; Indian Spring district; F. B. Sanborn, D. A. Armstrong, D. S. Tibbets.

Cumberland Coal M. Co.; Wm. H. Rhodes, N. J. Bird, H. Huguet, Robert Packard, B. Lamolle.

Columbia G. & S. M. Co., Virginia district; D. W. Perley, G. W. M. Cowles, Frank Ganahl, C. E. DeLong, G. A. King.

Mount Washington G. & S. M. Co., Gold Hill district; W. H. Beegan, Levi Foss, E. Palmer.

Gen. Banks and Grey Eagle Consolidated G. & S. M. Co., Blue Sulphur Springs district; J. F. Dollier, J. Fox, Charles Grant.

Arrington G. & S. M. Co., Gold Hill district; W. Arrington, G. W. Lewis, O. H. Platt, W. B. Hickok, R. L. Corbett.

Levant S. M. Co., Reese River district; R. W. Dunleary, William Browne, M. A. Baldwin.

Washington G. & S. M. Co., Indian Springs district; A. H. Bisbee, A. B. P. Stanwurd, Isaac Lembut, T. J. Patten, E. Chandler.

Merrion G. & S. M. Co., Blue Sulphur Springs district; H. C. Brow, H. W. Vosburg, H. H. Flagg.

Garrison G. & S. M. Co., Gold Hill district; W. T. Nichols. A. J. Rhoads, Frank Healy, Henry Edgerton.

Chieftain Tunnel, Mining and Water Co., Amador district; Geo. Bonney, C. H. Dexter, C. H. Patchin, H. G. C. Schmidt, W. B. Bobinson.

Young America G. & S. M. Co., Mount Hope district; M. O. Dale, W. A. W. Dearborn, R. H. Stewart, R. Crawford, O. H. Strickland.

Gen. Marion G. & S. M. Co., Rig Creek district; Geo. Bogers, J. H. Waves, F. T. Stanford, C. Bolton, J. Fitzmaurice.

Milne Co., Reese River district; S. E. Greeley, Wm. Warner, Wm. J. Blake.

Alleghany Coal Co., Ormsby county; C. W. Goro, F. B. Horton, P. Andrieu.

Deep Red G. & S. M. Co., Blue Sulphur district; Geo. W. Delavan W. S. Moffatt, R. Thompson.

HANDSOME PATTERNS.—One of the finest set of patterns we have ever seen in this city, was shown us recently at the Golden State Iron Works, by Henry S. Smith, foreman. They are for the manufacture of the Tyler water wheels, now extensively used in the East.

"CHIPPINGS."

Wonder is often expressed that the loss of life in large battles is so small. The condition of 58,000 muskets captured at Gettysburg may explain partly. Of these, 24,000 were found to be loaded, 12,000 contained two loads, and 6,000 from three to ten loads each. In numerous instances half a dozen balls were driven in ou a single charge of powder. In some cases the former possessor had reversed the usual order, placing the ball at the bottom of the barrel and powder on the top. Not unfrequently several paper cartridges were packed above each other without being torn or broken.

There has been no rain in Hungary for nearly two years. As a consequence, the crops have failed, and the flocks and herds are dying, disease having followed the drougth. A correspondent of a London paper estimates the loss at sixty million dollars.

The Stockton *Independent* says that many farmers, in consequence of the lack of feed, and the poor prospect of getting rain, are selecting locations in the tules for their loose stock, to keep them from dying.

The citizens of Nevada are making a move for a branch railroad to connect with the great Pacific road, which is fast working its way mountain-ward. It will pass within about ten miles of that city.

The debt of England is four thousand millions of dollars. Our debt will figure up, perhaps, three thousand millions before we are through with the rebellion. England has au island to tax—we have a continent.

A pair of andirons made of iron, but in the elaborate Italian style of the seventeenth century, were sold at auction in Paris, recently, for 7,000f—$1,400 in gold.

The Monterey *Gazette* says very few people in that county will be able to pay their taxes in November next, and are petitioning the Legislature for an extension of the time.

Several families in Sutter county are preparing to leave for Boise river. The Marysville *Appeal* thinks that if the dry weather continues it will drive thousands of people out of this State.

The ocean is the throbbing heart of the universe, and its every wave a mound over those who have no grave.

The Grand Jury of Storey county, N. T., have found a bill of indictment for murder in the second degree against Captain Johnson for the murder of Horace Smith.

Five hundred thousand people walk the streets of Paris by night, and all night omnibuses are to be established for their accommodation.

General Cass is said to be so feeble that he cannot live much longer. He is in his eighty-first year.

The knitting mills at Seneca Falls, New York, now turn out ten thousand pairs of army hose a day.

A man of regular habits is Mr. Lawrence of Falmouth. He has mowed the same field for seventy successive years.

Eighty-one passengers recently arrived in Virginia City, from California, in one day, by stage alone.

A Parisian doctor has discovered that brandy or rum is the best antidote for chloroform, and that it will at once counteract the effects of an overdose.

An exchange truly says there is no book so cheap as a new-paper; none so interesting, because it consists of a variety measured out in suitable portions as to time and quantity. Because new every day in the week, it invites to a habit of reading, and affords an easy and agreeable means of acquiring knowledge, so essential to the individual and the community. It causes many to pass away hours pleasantly and profitably, which would otherwise be spent in idleness and mischief.

Papers Wanted.—Twenty-five cents per copy will be paid for No. 3 of Vol. 8, (dated Jan. 16, 1864) of the Mining and Scientific Press." Send them to this Office.

Professor Whitney's Lecture.—Extra copies of the Mining and Scientific Press of February 6th, 1864, containing the lecture of Prof. J. D. Whitney, (State Geologist,) on "Mining and Its Relations to Civilization and Progress," can be obtained by calling at this office.

MINERS' FOUNDRY
—AND—
MACHINE WORKS,

First street, between Howard and Folsom streets,
SAN FRANCISCO.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz mill machinery, Mining Pumps, Amalgamators, Retorts, Etc., Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

HOWLAND, ANGEL & KING.

WANTED,
Gold Quartz suitable for Cutting Jewelry.

By FRONTIER & DEVIERCY.
437 Pine Street, San Francisco.
au31tf.

A. S. HALLIDIE & CO.,
WIRE ROPE MANUFACTURERS.

Established 1857.

Office, No. 412 Clay street—Works, North Beach,
SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for

HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

Must be seen to be Appreciated!

THE FLORENCE!

A GREAT IMPROVEMENT!

This Celebrated
NEW SEWING MACHINE
IS ACKNOWLEDGED TO BE
THE BEST IN THE WORLD!

IT MAKES FOUR DISTINCT STITCHES!
IT FEEDS THE WORK EITHER WAY!
WILL SEW OVER THE HEAVIEST SEAMS,
WITHOUT CHANGE OF TENSION!
IT SELDOM, IF EVER, DROPS A STITCH!
IT SEWS WITH SILK OR COTTON THREAD EQUALLY WELL!
IT RUNS LIGHTLY, SEWS RAPIDLY AND IS ALMOST NOISELESS!
IT DOES THE HEAVIEST OR FINEST WORK WITH EQUAL FACILITY!
IT MAKES A STICH ALIKE ON BOTH SIDES OF THE FABRIC, USING ONLY HALF THE QUANTITY OF THREAD NECESSARY FOR THE OLD FASHIONED CHAIN-STICH MACHINES!

WHILE IT POSSESSES ALL THE GOOD QUALITIES OF others, and has many advantages over any and all of them, the FLORENCE is sold at corresponding prices with other first-class Machines. We
WARRANT EVERY MACHINE
To be all that we claim for it, and will give a WRITTEN WARRANTY if required.

AGENTS WANTED in all the principal cities and towns on the Pacific coast.

Send for Circulars and samples of sewing.

DON'T BUY A SEWING MACHINE UNTIL
YOU HAVE
SEEN "THE FLORENCE!"

111 Montgomery street, between Bush and Sutter, San Francisco, California. j2-3m

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

To Druggists and all Prescribing for Neuralgic AND NERVOUS CASES.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

For sale, Wholesale and Retail, by SAMUEL ADAMS, U. S. Drug Store, corner of Pine and Kearny Streets, San Francisco. 6v8-2m

The Pacific Monthly Magazine.

The only original magazine published on the Pacific coast.

EDITED BY LISLE LESTER,

Recently from the East, comes out in new type, new cover, and fresh in all its material and matter. This Magazine will be devoted to the Literature of the Pacific coast, and will equal any of the Eastern publications in variety, taste and class of its contributions.

The Editress is striving to make it a

HOUSEHOLD WORK.

A new story written by an Eastern lady of talent and renown, commences with the January number. All who wish to read "SHIMAH" must subscribe at once.

The PACIFIC MONTHLY now established on a permanent basis, it numbers among its contributors the best writers of this State, and offers to those who love a chaste, thoughtful and elegant style of literature, attractions superior to those of any other publication on this coast. Its aim will be to elevate the literary standard of this State, and give to the world a truthful picture of the life and literature of California.

The March number is to be illustrated with views around San Francisco.

The Editor's table is alone worth having.

The subscription rates are less than other works of a similar character. All orders promptly attended to.

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machines now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

Emmett Copper Mining Company, Office No. 645 Clay Street, San Francisco, February 19th, 1864.—Notice is hereby given to the Stockholders of the Emmett Copper Mining Company, that an assessment, No. 4, of 37½ cents per share was this day levied on each and every share of the Capital Stock of said Company, payable immediately in United States Gold Coin, to the Secretary, or to L. HONIGSBERGER, Copperopolis.
8v8-4t M. G. ELMORE, Sec'y.

Give the Name of the District.

We are requested to call the attention of Secretaries of Mining Companies to the importance of inserting in their advertisements, of whatever character, the name of the district or locality. Considerable trouble arises from this neglect, as there are Companies bearing the same name, although situated in different localities. Attention to this matter will not only be a benefit to others interested in Mining Companies, but also to the Secretaries themselves.

Before Cutting the Leaves of this journal, stitch each No through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference.

Office of the Belle Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. San Francisco Feb. 23, 1864.—Notice is hereby given that at a meeting of the Board of Trustees of the above Company, held this day, an assessment (No. 2) of fifty cents per share has been levied on each and every share of the capital stock, payable immediately, in gold coin, to the Secretary at his office. J. S. LUTY, Sec'y, 305 Montgomery.
9v8-4t.

Maryland Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305 Montgomery street, San Francisco, Feb. 25, 1864.—Notice is hereby given that at a meeting of the Board of Trustees of the above named company, held this day, an assessment of fifty cents per share has been levied on each and every share of the capital stock, payable immediately to the Secretary, at his office. By order of the Board of Trustees.
9v8-4t. J. S. LUTY, Sec'y.

Picayune Gold, Silver and Copper Mining Company, Bear Gulch, Calaveras Co.—At a meeting of the Board of Trustees of the above Company, on the 17th day of February, 1864, an assessment of six cents per share on each and every share of the Capital stock of the said Company was levied, payable on or before the 22d, day of March, 1864. And Notice is also hereby given that the first annual meeting of the Stockholders of the said Company will be held on Tuesday the 22d day of March 1864, at the office of the Company at Copperopolis, for the purpose of electing officers for the ensuing year, for the adoption of By-laws, and for the transaction of such other business as may come to its notice. All Stockholders are respectfully requested to attend.
By order of the Board of Trustees,
L. HONIGSBERGER, Sec'y.
Copperopolis, Feb. 17th, '64. 9v8-4t

Imperatrice Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305 Montgomery street, San Francisco, Feb. 24, 1864.—Notice is hereby given that at a meeting of the Board of Trustees, held this day, an assessment (No 2) of fifty cents per share was levied on each and every share of the Imperatrice Silver Mining Company, payable immediately, in gold coin, to the Secretary, at the Company's office. By order of the Board of Trustees. (9v8-4t.) J. S. LUTY, Sec'y.

Enterprise Copper Mining Company.—Office 645 Clay Street, San Francisco, Feb. 13th, 1864.—Notice is hereby given, that there will be sold at the Office of the Enterprise Copper Mining Company, on Saturday March 19th, 1864, at 10 o'clock A. M. so many shares of the Capital Stock of said Company as will be necessary to pay all assessments due and delinquent, standing in the names of the following parties:

NAMES.	NO. SHARES.	AM'T. DUE.
Abell & Evans	200	$ 52
A. Bateman	125	32 50
Belcher & Schwarz	34	8 84
M. Berkowitz	50	4
John Cochran	25	14
J. M. Camon	25	14
J. P. Dameron	100	45
Wm. Davis	25	6 50
Thos. Donahue	15	8 40
James Daley	10	2 60
D. Elsner	133	21 23

Brown's Bronchial Troches.—These Lozenges are prepared from a highly esteemed receipe for alleviating BRONCHIAL AFFECTIONS, ASTHMA, HOARSENESS, COUGHS, COLDS, and IRRITATION of the Throat.

PUBLIC SPEAKERS AND VOCALISTS

Will find them beneficial in clearing the voice before speaking or singing, and relieving the throat after any unusual exertion of the vocal organs, having a peculiar adaption to affections which disturb the organs of speech.

Agents for California, REDINGTON & Co., San Francisco. 10-1m

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Mr. Jarvis Jewett is our duly authorized advertizing agent and collector in this city.

Physical Growth of San Francisco.

BY A SPECIAL CONTRIBUTOR.

Let us go to one of our neighboring hights and not only look around but *back* into the Past; and what do we see?

A semicircular cove, curving inland, and defining a peninsula composed of high sand hills, bleak and barren in the extreme, appears in view. On the point of a high promontory that looks northward, standing with a strong relief against the deep blue sky and bathed in the light of a clear October morning, appears a single human figure. He is clad in priestly garments, and wears, withal, a look of earnestness, worthy his high vocation, as a Spiritual Teacher. His searching eye, passing over land and water seems to be taking, at one keen and rapid glance, both the altitude and depth, the extent and capability of things. We see he is satisfied with the prospect, as he folds about himself his outer garment, which the wind that is howling savagely through the gaps and gorges of the hills, has partially swept away—resolutely, as if he had folded with it the will to do and suffer—to develop and sustain the forces, which are even now, revolving in his large and busy brain.

That man is Father Juniper Serra, who, by one of those disguised Providences loosely denominated accidents, has passed by Monterey, his point of destination; and still bearing to the north, finally discovered our beautiful Bay, which he has named San Francisco, in honor of his patron Saint, who, by more than ordinary manifestations of presence, has led him hither.

Years roll on; and the scene changes. The simple Indians are gathered around the new church in a neighboring place. Now come cattle to the distant hills and culture to the valleys; and a flourishing Mission is established; but the present site of San Francisco still remains unshorn of its shaggy bearding of gray chaparal, and still reposes in all the grand desolation of nature.

Again the scene changes. On the cove lie two small sloops careening almost into the face of the water, as they shake and shiver in the rising wind; and stooping down almost to the very verge of the shore there is one dwelling, half house, half tent, the first and only one that has yet appeared. It was built in 1835 by Captain Richardson, who also owns, and navigates the two small vessels in the incipient harbor. Poor as it appears, this is the actual beginning of San Francisco. So late as 1846 it was but a small village, then called Yerba Buena. It waited patiently for the magic word to be spoken, and then it awoke. There were obstacles to be overcome; there were capabilities to be seen; there were forces to be evolved. Then came, but not finally until the year 1848, the conceptive sight, the constructive genius and the pushing power of the American people; and the long-latent Yerba Buena, having waited her full time, burst into sudden flower, and the fruit was San Francisco. Thus within a quarter of a century the whole growth is included.

Look at it now, in all the light and glory of the present. On the land appears a wide and densely clustered array of human habitations—on the water, a forest of shipping. In short, we find a city of the first order, the home of more than 120,000 souls. Comfortable and convenient dwellings, scattered at large, now cluster in crowded courts, now define the borders of broad and graded streets, while the great thoroughfares are skirted with lofty blocks of brick, granite or marble. Here are hotels that tempt alike the luxurious and the curious, the restless resident and the weary way-farer, with the comforts of home and the splendor of palaces; halls where amusement, learning and science alternately hold their reign; hospitals and asylums for the sick and poor of almost every land, and churches that exhibit the artistic power and appreciation, as well as the moral and religious calibre of the people, the whole encircled by at least four miles of solid and substantial wharfage, that will soon be altogether worthy of the finest harbor in the world, as we claim our own to be.

All this has been achieved at the greatest possible disadvantage. Hollows have been filled up; hard and rocky hills have been leveled, sometimes long streets passing through the heart; otherwise impassable hights have been terraced; the houses along whole streets have been raised to a level with the rising highway, and almost all the most important business portion of the city is built on lands that were made, at an amazing expense, by transferring the sand hills into the cove. The magnitude of this work can better be conceived of when we reflect that water to the depth of several fathoms has thus been filled up, and that large ships, that had foundered in the mud, lie under some of our principal streets—one of them, the Niantic, having given its name to the hotel under which it lies buried.

Our progress has also been checked by several extensive and devastating fires, so that our city has not only been built, but nearly rebuilt, a number of times. Yet, in defiance of every difficulty, the progressive power still strode on, carrying in its train results so stupendous that could they be set forth in their right array, they would seem more extravagant than the wildest fiction. In view of a spectacle so imposing, the imagination becomes excited, and common speech warms with poetic fervor.

We have read in the Arabian Nights, and elsewhere stories of incredible heroism—enchantments of superhuman sagacity and power. We smile at their absurdity, and still read on, amused if not instructed, by their marvelous unfoldings. Yet here is a scene, concrete and living, with all the form and force of the most intense organic power, based in the history of our own times, shaping and clothed with fact, as it were, under our very eyes, yet involving the actual presence of magic on a grander scale than the Oriental romancer ever dreamed of. What Aladdin ever conjured up forces so powerful yet so obedient; what Ali Babi even spoke the "open sesame" to wealth so exhaustless; what Facardin ever bound the Fates themselves by a power so potent and resistless, as in the deepest noonday of the nineteenth century we see bound up with our city, as it *appears*, and is to-day. Yet all this has been achieved by purely human forces—the strength, sagacity, wisdom and will of the bare MAN; and what is more, it has been accomplished by fighting *against* FATE. Here, verily, truth is stranger than fiction, and concrete tangible fact draws harder on our credulity than the wildest romance.

Nor is the scene less surprising as we descend to details, and carefully analyze its features. The strength and capacity of the warehouses, the elegance and fullness of the retail stores, and the brilliant evening array of Montgomery street, surprise and startle one who thinks he has come to a very young city. That there is a high degree of intelligence and home blessing, may be seen in the great numbers of well-dressed and refined women we meet indoors and out, while the conservative, as well as the radical power of the atmosphere itself may be inferred from the large proportion of beautiful faces, especially of the young girls. Again, on the other hand, the profound business aspect of the men, the startling character of the advertisements, and, in fact, the whole spirit of the press, all declare that here the great game of life is played under the strongest stimuli and with the boldest hazards.

The semi-Oriental character of certain districts is a distinguishing feature; but the entire absence of beggary is a still more remarkable one. It may be said, without fear of contradiction, that in no large city of the world are there so few professional mendicants as in San Francisco. We are justly proud of our city, or rather of our people, who constitute its living fibre and moving essence. The rapidity of its growth, the suddenness of its development, defy competition, even of the most precocious American cities.

STREET RAILROADS.

One of the most remarkable outgrowths of power in the physical plane, will be found in our yet infant system of street railroads. Although our omnibus lines have been in operation but little more than a year, they rival in extent of traverse, variety, comfort and elegance of accommodation, the best in the Atlantic cities, not even excepting New York and Philadelphia.

The first of our street railroads was the Market street steam line, which began in 1860; its presence being almost immediately marked by a great rise in the value of real estate, and a consequent increasing harvest of taxes, to be gathered by the city. But the most important advent of the locomotive order was that of the horse-car and omnibus lines, the first of which commenced running January 1st, 1863. The North Beach and Mission began February 1st of the same year; and the Central Railroad Company January 1st of the present year. These roads, which include more than thirty miles of single track, have been constructed at a stupendous labor and expense. The advantage they are to the city it is impossible to estimate. Unsightly sand hills have been cut through and leveled before them, and fine graded and macadamized roads constructed for their accommodation. And these roads are all free. Before their construction there was not a free road anywhere in the vicinity. We could not even go out to Lone Mountain to bury our dead, or lay a rose on the grave of the dear departed, without a heavy extra tax in the shape of toll. But now we have the finest carriage roads, lighted by night and excellent at all times, leading to all our principal suburbs, that are absolutely free and open to the public.

We may well be proud of our railway system; and, as a people, we are in duty bound, both to ourselves and its enterprising projectors, to throw around it all possible protection. Its rapid growth is a true measure of our progressive power.

And the late completion of the San Jose Railroad is so much done toward the great Atlantic and Pacific Highway, which we have invoked, and shall embody, by all the powers of hand and will, of mind, means and material, which the world can furnish to our work. Who can foretell the results of such an enterprise, but that Civilization itself will be accelerated, and conducted into wider ranges of occupation and power.

We have not yet exhausted our material, but are admonished by the crowding spaces to have the remainder of this part of the subject for next week.

REMOVAL.—The Mountain *Messenger*, of March 19th, announces that its next publication will be made at Downieville.

[Written for the Mining and Scientific Press.]

Calaveras and Tuolumne Copper Mines.

BY OUR TRAVELING CORRESPONDENT.

Mr. Editor :—My report upon the mines in the neighborhood of Mokelumne Hill and San Andreas completed my tour of inspection. I had, nevertheless, an important duty to perform, perhaps the most important of my labors—viz: to prepare an account of the probable real value of the districts I visited. In order to do this effectively, I purposely deferred it until my return to San Francisco, that I might have the advantage of certain works to which I desired to refer. I now proceed to make a final effort to place the copper mines of the State in their true light before the capitalists of this city; and, in re-asserting their pre-eminence over all others in the world for extent, richness and reliability, I trust I shall be found to do so, on arguments that cannot be rebutted, and facts that cannot be disputed.

I had been but a few hours on Montgomery street before I discovered that considerable attention had been paid to my reports; for I was asked a score of times, in almost as many minutes, whether I had not, after all, over-estimated our mines, and attached too high a value to the copper interests? I was rather pleased than otherwise to find the public opinion run in that direction, because, having in reality under estimated both, I shall now have less difficulty in obtaining a general assent to the facts and statistics submitted in this letter.

It has often, during my travels, been a surprise to me that the business tact and keenness of the American people, as developed in the history of California, ever so ready at all times, and under all circumstances, to seize upon opportunities of making money which present themselves, should be so strangely dull and sluggish in this direction. At one time or another during our brief sojourn on the Pacific slope, we have seen the current of business tact and public desire set in every possible direction. First, accumulating means in the placer mines, the *great idea* was to own a ranch; then it was stock—cattle, horses and hogs; then it was raising barley; next, wheat, potatoes and hay; finally, fruit; until, from everybody going into these occupations, the whole gradually became unprofitable, and, in most cases ruinous. Such a result was inevitable, for political economy teaches us that so far as the general prosperity of a community is concerned, there is really no difference between over-production and under-production; that one is as great an evil as the other. If no one desires to buy, of course no one is able to sell; and thus the produce, whatever it may be, having no market, has no valuation; while the more extensive it is, the more certain and complete the ruin it involves. How many of our once wealthy families, wealthy in lands, in stock, in produce, in vineyards, find themselves to-day in this deplorable condition—the result of mistaken judgment and short-sighted policy.

But, in reference to the copper business, this is all changed, for the simple reason that there is no such thing as creating an over-production of the article, or arresting its sale in the market. From the time of Tubal Cain, the great artificer mentioned in the Old Testament, it has been the experience of all ages and people that the production of *one ton* created the demand for *two*, and that the world never had, probably never will have, more than half the supply it needs of this most important metal. Grecian historians, such as Homer and Hesiod, sang the fame of Cadmus for discovering copper on the island of Cyprus, and teaching its application to the wants of man. All through the Roman era, in the mystic language of the Alchemists, copper came to be called Venus, to which goddess the island of Cyprus was sacred. And to-day, amongst ourselves, the most intelligent of all people, copper still holds its rank as the most important of the seven primitive metals in use amongst the ancients.

Yet, strange to say, although we have, without exception, the most wonderful cupriferous formation, in richness and extent, the world every knew, lying within a day's easy drive from Stockton, it seems impossible to arouse the capitalists of this city to a just realization of the fact. In any other country, I am convinced, a public thanksgiving would be ordained for the discovery; poets and orators of the choicest intellect would be selected, as in days of old, to sing its praises, 'till every corner of the earth echoed back its fame; capital and labor would roll in peaceably together, that they might gladden and enrich the masses of the many, and give new life, power and greatness to the nation. Here, however, on the contrary, it is regarded with distrust and treated with indifference, because the *result* of the labor and capital already expended has not come up to public expectation. But that, I hold, is not a just criterion. If this public expectation had been governed by a desire to develop a permanent national wealth, which is patient and enduring to the end, and not by an individual desire to become suddenly rich, which is equally capricious and unstable, the condition of the copper interest would be much better than it is to-day. Nevertheless I hold, in spite of all croakers, from drunken Dogberrys to scheming Bears, that the result of both the labor and capital expended hitherto in the copper mines, although in many instances criminally abused, is worthy the cause to which it was devoted, and creditable to American enterprise and skill. The surest way of proving this assertion is to recapitulate, in one letter, the character of this cupriferous formation—the total number of veins, their extent and richness. First, then,

THE NUMBER OF VEINS.

It is well known, now, that the extent of the copper region is about 25 miles wide, reaching from Telegraph City, eight miles west of Copperopolis (regarded as the centre of the entire system), to San Domingo, sixteen miles east of that town. Within this range I find *twenty-nine* distinct veins. So far as the reliability of this remarkable formation is concerned, there is no future doubt, for I hold it to-day to be thoroughly developed through the entire center—that is, we have shipping ore, of high percentage and large quantities, at the western boundary, from the Napoleon; at Copperopolis, from the Keystone and Union, in the center; at San Domingo, from the Noble, the eastern boundary. At Campo Seco, on the Mokelumne river, and Don Pedro's Bar, on the Tuolumne river, 45 miles apart through the centre, north and south, we have also shipping ore, equally rich and in large quantities, from the Copper Hill, Lancha Plana and Campo Seco at the north, and the Salambo at the south. Hence I hold the entire system is developed, and being rich through the center east and west 25 miles, and rich through the center north and south 45 miles, there is no legitimate argument against my presumption that a large proportion of the *two hundred and fifty* mines, now in a more or less forward state of development, at different places on these parallel veins, and all which I have reported in a healthy condition, will also become paying institutions when they get deep enough. Apart, however, from these actual developments, showing copper to exist in immense quantities throughout the entire range, and judging of the merits of each vein from its own evidences, I find little, very little, to give one a preference over another. Their remarkable feature is, that they all look equally well in different places, and upon this fact I base my judgment of their ultimate value. Hence my reports are not overdrawn. If I were to form a preference from external evidences, apart from actual developments, in favor of certain places, I should select Campo Seco, Crimea House and Sonora. As a general thing, there is no preference to be given. One fact, however, is patent to every one, whether he understands the formation of copper or not, the veins almost everywhere in the two counties look better, stronger and healthier than they do immediately around Copperopolis. Hence I say there is ample assurance of ultimate success to all. But, on re-visiting different mines on my way home, where I had every reason to suppose that ore would have been struck two months ago, I have been forced to the conclusion that the copper line is deeper than I thought at first, and that no general strikes will be made at less than 150 or 200 feet deep; yet, admitting this to be so, I am certain that the ensuing year will show more successful results than the past three years have done; because the people are beginning to understand this particular character of mining, and a great number of shafts must necessarily be approximating the copper line. Now, therefore, is the time for capitalists to invest. A few months hence may be too late. Men owning a two or three-foot vein of ore need not care to have the Czar of all the Russias for their partner, wealthy as he is, and friendly as he is supposed to be to the American people at large. How, then, will they treat the Bears and Bulls of Montgomery street, who, in their short-sighted, self-sufficiency and ignorance, scorn, just now, even to mention copper stock? There will come a terrible day of retribution, and I intend to help it along all I can.

EXTENT OF THE VEINS.

As I have already stated, I have been on these 29 parallel veins, for 25 miles in width and 45 miles in length. Necessarily in traveling backwards and forwards to the different claims, I have intersected them at every point, and enjoyed the fullest opportunity of judging their extent and character. I have ridden along many of them for 30 miles, without intermission, and almost everywhere find them show on the surface from ten to thirty feet in width. It is really marvelous how little interruption there is to their surface continuity. Indeed the only place where a break of consequence occurs is up the Salt Spring Valley, from the Keystone to the Suffolk. Throughout these ten miles it will be extremely difficult to locate these veins, and more so to work them, on account of water. In reference to the question of all these veins being continuous, and it is very important, there seems to be no doubt now of their traversing the entire length of the State. Upon this point of extension we need not perplex ourselves, for if they go no farther than my own travels, they are large enough to heat the world. It is of more consequence to those desirous of obtaining reliable information, to know how the veins hold themselves in width. So far as opened, they fully sustain their reputation. From four to six feet seems to be the average width, though some go thirty feet. If we are to judge of those undeveloped by those now shipping ore, no mind can calculate the immensity of our copper interests in the future. Perhaps it may be well to enumerate the principal ones. The Union is 16 feet; Keystone, from 3 to 15; Napoleon, over 20; the Cosmopolitan, recently struck on the same hill, 6; the Campo Seco, 10; the Copper Hill, 8; Lancha Plana, 8; Noble, 3; Solambo, 4; Table Mountain, 3; with the Empire, Calaveras and others just opening, ranging about the same, thus giving us, as a present result, over 100 feet in width of solid sulphuret ore to draw from. Yet copper stock must not be mentioned on Montgomery street! How absurd! I reckon, however, our friends at the mines can afford to "hide their time," and then somebody will have to pay for learning.

RICHNESS OF THE VEINS.

Those unacquainted with the history of copper, or those whose present connection with the business has made them somewhat conversant with its vastness will scarcely believe the figures I am about to give, still less be prepared to admit the important position California has already taken among the copper producing countries of the world. Yet you, Mr. Editor, well know the unquestionable authority from which I quote, so that the public need have no doubt of the correctness of my statements.

In the first place, let me show the comparative production between England and this State. Dr. R. H. Lamborn, the highest authority of the day, says that "the United Kingdom produced in 1858 from the one hundred and sixty-four mines, that are reported, 226,852 tons of ore, valued at $6,682,675, which contained 14,456 tons of *fine* copper, valued at $7,813,165. The total quantity of *copper* produced from British, foreign and colonial ores, during the same year, was 31,611 tons, valued at $15,085,149." Now the produce during the present year, of the Calaveras and Tuolumne mines, now shipping ore, or capable of doing so, if pressed to their utmost capacity, with the aid of proper concentrating machinery, I set down as a reasonable estimate at 34,400 tons. I rate them thus: at Copperopolis, the Union, Keystone, Table Mountain, Empire, and Calaveras at 1250 tons a month: at Hog Hill, the Napoleon, Cosmopolitan, and Collyer 600: at Campo Seco, the Copper Hill, Lancha Plana and Camp Seco 750: at different places, the Solambo, the Noble, and others 100, making altogether the amount given 32,400 tons for the current year, from 15 mines, which yield, if applied to the 164 mines already alluded to, would exceed them 129,828 tons. Suppose I reduce my estimate of the probable paying mines, in the district which we are examining, *one third*, and say that out of the 260 mines, I have reported upon, we shall have in two years 164 paying mines, and that is not extravagant, we arrive on easy calculations, at this wonderful fact that in 1866, the copper mines of Calaveras and Tuolumne counties alone will equal the entire produce of the English, Foreign and Colonial mines in 1858, and give the nation a clear profit of *fifteen million* dollars a year. What a wonderful place Washoe must be thus to monopolize the love of this city!

You may recollect, that in my letter from Mokelumne Hill, I stated, at a rough guess, that the annual proceeds of these mines, if thoroughly opened, would reach $24,000,000. At the time, many thought that estimate ridiculous; yet you see, according to the authority quoted, considered in the question of produce alone, it is really under the mark. I shall now prove it so. In the third and last table prepared by Dr. Lamborn, he gives the per centage of the ores sold at the Cornish "ticketings" from 1771 to 1859, extending through a period of 88 years. I hope the Bears and Bulls of our city, and every other man, will read this paragraph carefully, because it ventilates the wealth of our copper mines freely. By this

table, I find the per centage of the English ore ends, where the California begins—that is, their ore for a period of 88 years, ran from 6 to 12 per cent., while the California ore begins at 12 and runs to 30 per cent. Now add this superior percentage, to the equality of production, and our annual copper yield instead of 24 will exceed $30,000,000. There is no mistake in this as I shall prove by figures. From 1771 to 1790, Dr. Lamborn says, the ore in England reached its maximum, 12 per cent; for the next seven years it averaged 8.8; for the next 12 years 9.1 and 9.5; for the next 15 years 7.9 to 8.1; for the next 18 years 7.9 to 8.3; for the remaining 7 years, 6.4 to 6.8. Now, Sir, place this per centage, in comparison with the California ore, and it becomes simply pitiful, that's the expression — simply pitiful! California ships no ore under 12 per cent., and a large amount as high as 20. After this, I do not think my estimate of the annual revenue will be again questioned. What a wonderful place Washoe must be, thus to absorb all the capital of the State. How wise and sensible also, to send it *all* there, instead of dividing the chances between silver in Washoe and copper in California, with the present prospects of return.

In addition to what has already been written, it must be recollected, that while during the last 25 years, the world's supply of copper has more than *doubled*, it is now higher in price than ever. I believe the last quotation in New York was 42¾ cents per pound, though I have no idea it will remain at that figure.

But I must hurry to a close. In taking leave of my copper friends, I do not think I can do so more gracefully, certainly not more in consonance with my own feelings, or more effectually, than by quoting the beautiful tribute which Dr. Lamborn gives to copper. "In the construction and ornamentation of churches, copper has played an important part: the roof, the altars, and the sepulchral monuments were often wrought of this substance: and the statures and decorations of pantheistic temples still exist in renovated forms in the worshiping places of christianity. The invention of gunpowder, and the subsequent introduction of bronze cannon in the wars of the fourteenth and fifteenth centuries, had an important influence in increasing the value and the production of copper; and as the civilization of more modern periods grew, the demand for a cheaper metal, approaching in its properties those of gold and silver, increased rapidly, until at present there is scarcely a branch of human economy where copper is not found an important means of arriving at greater perfection. Either unmixed or in the form of a compound, it is employed in the construction of nearly all kinds of machinery: for forming the delicate instruments of the astronomer, natural philosopher, engineer, and musician; for increasing the security of commercial enterprise by adding to the durability of ships; as a path for the electric current in its bold journey from continent to continent in the service of civilization. It furnishes a re-agent for the chemist, and for the physician a remedy against disease. The sculptor employes it to express his conceptions, the painter aided by the engraver, to reproduce and disseminate beautiful thoughts. The electro-metallurgist uses it to catch and make prominent the evanescent forms of nature and art. The glass-maker, the cook, the dyer, and those engaged in many other employments, use it constantly, while almost every advance made in technical science adds to the number of its applications."

L. H.

[Written for the Mining and Scientific Press.]

Owen's River Correspondence.

Editors Mining and Scientific Press:—Knowing the interest you take in all new mining discoveries and developments in the mineral regions of Nevada Territory and California, I send you the following from this new and important district. Some four weeks since a party left Owensville to prospect the Inyo range of mountains north of Keyes and Lone Pine District, and on arriving at this place they made discoveries they think that will fully justify the name of Montgomery—it being the same relation to all the other districts yet discovered in the Inyo range that Montgomery street in your city does to Front and Second streets. In this district the lodes are large, rich, and well defined, ranging from four to fifteen feet in width on top, and widening as they go down as far as tested. Among many others I will mention the Pine Leaf, Rappahannock, Davy Crockett and Aristides. The Pine Leaf is a lode fifteen feet wide, and crops out in great fines, or chimnies, like the Comstock lode in Virginia City.

One of the striking characteristics of this lode is the bromides of silver found diffused all through the lode, not only in the outcrop, but as far down as the company have yet gone with their shaft. A gentleman just in from Reese River remarked, "If that lode was in Reese River it would bring $500 per share, without prospecting;" and from an assay since made, I am fully convinced of the truth of his assertion. The district has been very slightly prospected, and there remains doubtless many important discoveries yet to be made. Be that as it may, enough has already been discovered to make it one of the richest districts on the eastern slope of the Sierra Nevada mountains.

One favorable omen is, that no sooner was the Rappahannock located, recorded, and its worth made known, than it was claimed by outside parties, who probably never saw the lode. But you are aware, Mr. Editor, that all first-class lodes are apt to have many claimants, and we can hardly expect this district to form an exception. Already we have a town laid out by an enterprising party of capitalists and professional gentlemen from Aurora, and work commenced in turning one of the large mountain streams, so that the town of Montgomery may enjoy undisputed right to a full supply of good water. Situated as we are within one day's drive of Owensville, and a rich agricultural valley, hardly surpassed by the far-famed valleys of Napa and Sonoma, with abundance of grass and good water, a climate unsurpassed for health and mildness of temperature, with an inexhaustible forest of timber, extending from the base to the summit of the Inyo mountains, together with water power afforded by Marble, Union, Crystal Falls and Mill creeks, to drive any number of stamps that capital and enterprise may bring in; and we *do* believe the day is approaching, and is even at the doors, when Montgomery will occupy a place among the mining districts of the eastern slope, in every way worthy of the name.

Montgomery.

Montgomery District, March 7th, 1864.

The Baker Copper Mining Co.—This mine is situated in Garden Bar District, Placer county, about four miles from Lincoln, which is the principal town of the District and a depot of the California and Central Railroad. The mine presents a most favorable aspect in every particular and bids fair to equal in richness any mine on the coast. There are 1000 feet of the ledge, and a shaft has been sunk to the depth of 95 feet, revealing in its progress increased richness. As the shaft is continued, levels will be run, as may appear to advantage. The first level produces about ten tons of ore per day, consisting chiefly of the blue and green carbonates, together with silver and gold. The average assay of the ore yields 30 per cent. of copper, 13 ounces to the ton of silver and $33 of gold. The ledge is from four to six feet in width and increases in measurement richness as it deepens. By the middle of April, it is expected that 30 tons of ore will be daily extracted. This ore is sent directly to Swansea, Wales; 50 tons having already gone forward and one-hundred tons are awaiting shipment in this city. The main shaft will be continued with drifts wherever favorable indications occur. This mine is owned by five persons and the stock is not in market for sale.

Adjoining the Baker Co. is a gold quartz lead about 20 feet wide, the ore from which now averages $30 per ton and as work progresses, it shows increased richness. The indications are that it will prove a very valuable mine. The country in the vicinity of these mines presents a beautiful appearance, being made up of level land and rolling hills. Water and wood are sufficiently abundant for all mining purposes and it is well worth the time and expense to any prospector or curiosity seeker to visit the district. The expense of getting to the mines via. Sacramento by steamer, and per railroad to Lincoln and thence by horse, is about $12—making it a mere pleasure trip.

The Drought and Earthquakes.—Don Salvio Pacheco, an old resident of California, and a very intelligent and reliable gentleman, informs the Contra Costa *Gazette* that from the year 1824 to 1826 scarcely any rain whatever fell, that cattle died by thousands, and that earthquakes were very frequent, and so severe that in some instances adobe buildings were thrown down and the inmates buried in the ruins.

Nevada County Correspondence.

Nevada City, March 21, 1864.

Editors Scientific Press:—Mining news from this part of California bears much the same general character as that from most all mining portions of the State. The great cry is for water, and people are becoming impatient in waiting for the aqueous floods. The exhaustion, or working out of so many of the formerly rich placer and hydraulic diggings, added to the drought and the excitements in, or allurements of Nevada Territory, have a visibly unhappy effect here. Hundreds having comfortable homes in this county will dispose of them for but a small percentage on their original cost, or abandon them without receiving any compensation whatever, and hasten to the "Great Basin" with barely enough means to land them somewhere in that sage brush region.

In regard to mining here it is almost wholly confined to quartz. Of some eight or ten quartz mills in and about this city nearly all are kept in motion; at least but one or two are permanently idle. In the absence of water it might reasonably be expected that a stimulus would be given to quartz prospecting, but such does not appear to be the case. People insanely leave (at least I think so,) a country rich in minerals, producing fruit and vegetables in abundance, forsake the endearments of pleasant homes, society and civilization, blindly turn away from these advantages, and risk health, life and means among the desolate, sun-burnt mountains or alkali plains of Nevada Territory. The eastern portion of this county is, as I presume you are aware, unsettled, unprospected, and comparatively unknown, except to a few men engaged in hunting for game. Enough information however has been received respecting it to render it certain that gold deposits in quartz exist much nearer the summit of the Sierra than has been generally supposed. Numerous large and well defined quartz ledges south and east of Eureka on the Henness Pass road, are known to contain gold, but are undeveloped. They are in a region, compared with any part of Nevada Territory, easily accessible, abounding in good timber and plenty of the purest water. I may be in error, but I will hazard the remark, that fifty prospectors daily, in going from this city to Virginia, pass over a better and richer mining country, all things taken into consideration, than they will find on the other side of the mountains. Between Eureka and Canon Creek—which empties into the South Yuba, six large ledges have recently been located, and incorporated by the Star Quartz Mining Company of this city. These leads are from two to ten feet in width, well defined and can be traced a great distance on the surface. The above company have thoroughly tested four of their leads, and although the average yield of the rock does not reach any fabulous sum, yet considering the size of the ledges and the cheapness with which the quartz can be taken out, it is sufficient to render the prospects of the company decidedly flattering. The first rock crushed from the "Moonlight Ledge" yielded $52 per ton; from the "Star" $35; and from the Orleans $22. Thousands of tons of rock from these leads can be taken out and delivered on the spot where the company are about to erect a mill at less than two dollars per ton, while the cost of crushing is estimated at only three dollars. The Star Company have already expended a large sum in prospecting their ledges, and are satisfied that they have in them an inexhaustible quantity of rock that will pay well, and give employment to a large number of men and stamps. In the vicinity of these leads are many others that have good surface indications, which have hitherto remained unprospected, but are destined (as soon as the Washoe excitement will permit!) to receive the careful attention of the miner and capitalist. Rock now being taken from the "Fidelity" Ledge, near the mouth of Cañon Creek, on the Yuba, bears positive evidence of being exceedingly rich. The ledge is large and appears to be extensive. A water mill has been erected near this lead, but the absence of rain or snow in the mountains has rendered it useless thus far.

Beaumont.

More Whisky Material.—We have great news for the topers. Whisky and brandy can now be made out of coal gas, which consists of carbon and hydrogen, as does alcohol, with the addition of oxygen. For several years past the process of converting olefiant gas into spirit has been talked of, but now a French patent has been obtained for the purpose, and sold to a company in London. You add a little oxygen and a little hydrogen, and, presto! you have a bottle of brandy.

MINING GOSSIP.

EDITED BY FRANK WARDELL.

OBITUARY.

Death of Mr. John Young.

It is a sad task we are called upon this week to announce the death of Mr. JOHN YOUNG, an old resident and pioneer on the Pacific coast. Mr. Young arrived in California in the year 1846, having left home with the intention of joining his uncle, the late John Wilson, of San Luis Obispo. For quite a period after his arrival here, he traded extensively between California and the Mexican coast. In the year 1850 he received the important appointment of Superintendent of the renowned New Almaden mines, in which capacity he continued until 1863, when the property was disposed of to the Quicksilver Company. In December last he was elected President of the famous Gould & Curry Mining Company, and occupied that position up to the time of his death. He was a native of Scotland, and at the time of his decease was in the prime of life, being only in his 40th year. From his early youth he was distinguished for his industry and perseverance in business, and a high reputation for promptness and integrity in all mercantile pursuits. He was also kind-hearted and benevolent in all his relations, and ever ready to contribute aid for the relief of the suffering and destitute.

It would be vain talk to portray the many excellencies of character possessed by the deceased. He leaves behind him an interesting family, in very independent circumstances. His early and sudden demise will be sincerely lamented by them, and by a wide circle of friends. We tender to the afflicted family the sincerest assurances of our deepest sympathy and condolence in this our mutual affliction. We are aware that all the bright appendages of earth fall on the heart during the hours of each deep and weighty dispensation, and we gazed with silent awe on those once bright eyes in which had beamed the last expiring intelligence of love and friendship. They are now closed from earth forever. Yes, he has passed away like a flower that has fallen to the earth; but its perfume will never depart. Alas! the world was not long for him. He had fought his battles bravely, shook hands and departed. Now he is enshrined in all the dignity of death, pale and pure, a marble statue, a God-wrought monument to his own virtues, which were many and great.

> But he is blest; and though the charm is o'er
> The secret spell, and no more
> To glad the heart, the drooping circle cheer
> To fill a heartless void he may appear.
> Yes, he is happy; happier far than e'er
> Was mortal pilgrim in this world of care.
> From sorrow, sin and suffering he's at rest;
> Be this our consolation: he is blest.

Subjoined will be found the resolutions which were passed and adopted by the Trustees of the Gould & Curry Mining Company in honor to his memory:

Office of the Gould and Curry Silver Mining Company, San Francisco, March 22, 1864—At a meeting of the Trustees, held this day, the following preamble and resolutions were adopted:

The Trustees of the Gould and Curry Silver Mining Company have heard, with emotions of deep regret and sorrow, of the decease of their late President, MR. JOHN YOUNG, they desire to bear public testimony of their appreciation of the great loss which has been sustained in his death, not only by the whole community, of which he was a valued citizen, but more especially by the Trustees and stockholders of the corporation over which he had so recently been called to preside.

Gifted with business capacity of the highest order, and with sound and unerring judgment, his mental resources were equal to all the demands and emergencies of the large interests which were under his supervision. Governed by a rigid integrity, a strict impartiality and sense of justice, unwavering devotion and industry in the discharge of his duties, he was equally marked by the urbanity of his manner and courtesy of demeanor toward all with whom he had relations, which pointed him out as a Christian man and a true gentleman:

Therefore resolved—That in respect to the memory of our late President, the office of the Gould and Curry Silver Mining Company shall be closed until Thursday, 24th inst.

2d. That the Trustees and officers of the Company attend his funeral.

3d. That a copy of these preamble and resolutions be sent to the family of the deceased, and be published in the daily papers of the city.

By order. J. M. SHOTWELL, Secretary.

REMOVAL.—Messrs. Denckla & Chamberlin, Stock and Exchange Brokers, have removed their place of business to the corner of Clay and Montgomery Sts.

SUIT AGAINST A MINING COMPANY.—P. C. Aignes on the 22d inst., commenced suit against the Fellowes Mining Company for the recovery of the sum of $729, which he states is justly due him for work he has done in the mine.

FEET! FEET! FEET!—Mr. Parker wants his feet, and demands the same from the Ophir of the Colorado Company, by instituting a suit in the Fourth District Court. He says the Company refuses to issue him 200 feet of the stock, which belongs to him as one of the original locators.

EUREKA G. AND S. M. CO.—The Trustees of this company have declared a dividend of 1⅓ per cent. on the capital stock. The same was payable on the 23d inst.

ANOTHER NEW MAP.—Mr. A. K. Bishop has finished a neat and correct map of the Alsop Company's lodes, being those that were originally located by him in Sierra county. It comprises the Hebrew, Ohio, Pocahontas, Washington, Narragansett, Cox and Mammoth No. 2. There are a variety of other claims on the map, which are located in the same vicinity, owned by other parties, independent of this company's lodes.

COSALA SILVER MINING COMPANY.—This company has received, during the past week, from their mine in Mexico, nearly 500 ounces in bullion. The company have in progress a fine mill, which they expect to have completed in a few months. The cost of the same, when completed, will be in the vicinity of $10,000, exclusive of transportation, which will be very expensive.

HARMON CO., EL DORADO.—The excitement heretofore prevailing in this stock has, so it seems, wonderfully subsided and left, no doubt, many buyers at high figures in a *harmonized* condition. We trust our friends up country won't think hard of us for this joke.

FAILURES.—Two important failures among our stock operators have been announced upon the street during the past few days. As we can find no certainty attached to the rumor, we refrain from making the names public. The facinations of Lady Bryan have been, we learn, one of the prime causes of their downfall.

CROCKET G. & S. M. CO., ESMERALDA.—We should judge, if appearances in the way of prices, etc., are any indication that this claim had caught the prevailing disease from their neighbors, the Real Del Monte and Wide West Co's. The stock has been thrown on the market, in large quantities, and sold at very low figures. The reports we hear concerning it are anything but favorable.

DULL TIMES.—The brokers up in Washoe seem to have had a touch of our dull times, according to the accounts from their papers lately received here. They say that times are very quiet. Wild cat stock has not the least attention shown it, and stock even well known and in fair market standing is not offered in the Board for sale on account of the ridiculous bids that are made.

REAL DEL MONTE.—The accounts which are being constantly received here, we must say, are very encouraging ones to the stockholders. They continue to take out plenty of good pay rock, and have now the Stark & Tucker mill, on Bodie Gulch, running steadily night and day, on their ore.

GARRISON AND TUCKER AFFAIR.—The examination of John W. Tucker upon the charge of being the party who caused certain fraudulent dispatches to be forwarded to this city, regarding the Wide West mine, came up in the Police Court on the 25th inst., when the counsel for the defendant pleaded the statute of limitations—that more than one year having passed since the alleged charge had taken place previous to the entering of said complaint. The prosecution admitted the plea, and the case was therefore dismissed by the Court. Thus ends for the time being, the sensational romance of the Wide West. Mr. Tucker came out with an excellent card in an evening paper, vindicating his character, etc. If space would admit, we would like to publish it, but we are compelled to forbear.

BROKERS ON THE MUSCLE.—On the afternoon of the 25th, quite a lively and scientific pugilistic encounter took place between two prominent members of the 1st Board. The artistic manner displayed in the fight really reminded us of the days of the old Indian *hunters*, and the bravery could not have been excelled even in the days of *Perry's* victory. Come, gentlemen, this idea of knocking each other down is poor policy—you should confine that part of the business exclusively to stocks.

RICH.—New and extensive diggings have been found near Little Grass Valley, in Plumas county. From all accounts, says the Quincy *Union*, the mines there are as rich as any in the Boise River region. All the trouble is, they are not a thousand miles away, else there would be a "tremendous rush" and excitement.

BEST & BELCHER M. CO.—From recent accounts received from the superintendent of the mine (who by the by is a reliable and competent manager) it appears that they are down in their shaft 390 feet, and commenced a few days ago to drift for the ledge. Most of this stock is held by a few private parties and very little offering on the market for sale. The affairs of the company were never in a better condition than at present.

LADY BRYAN.—This stock has been the principle and leading feature in the mining share market during the past week. Immense quantities have changed hands at advanced market rates, owing to the receipt of several favorable despatches stating "they had struck the ledge in the lower drift very rich." It is said that the rock is of an entirely different character from what was discovered sometime ago, and, in appearance, at least, looks much richer.

BUCKEYE.—A. W. Stetson, Superintendant of this mine, reports that everything is progressing finely, the quartz has a good appearance, is becoming harder and the ledge widening as they go down.

HEAVY SALES.—There was $49,000 worth of Greenbacks sold in the first Stock and Exchange Board, on the afternoon of the 25th.

BURNING MOSCOW STOCK has advanced in price, and quite a quantity has been silently purchased on the "outside." We would not be surprised to see this stock take another flight. It is almost time.

SALT MINES.—The Sand Spring salt mines on the Reese River Road, N. T., produce thirty tons of salt per day, covering eighteen hundred acres, and the salt is from fifteen to twenty feet deep.

PETER DONAHUE, of this city, according to the Marysville *Appeal*, has purchased two hundred and fifty acres of the Stockton Ranch, opposite the Race Track near that city, where he intends to erect a country residence.

THE MEXICAN MINE, according to the Virginia *Bulletin*, yielded a net profit of $104,060 during the month of February. This is at the rate of $1,040 per foot—a pretty good monthly dividend.

IMPORTANT petroleum discoveries are reported in Southern Russia.

More about the Treatment of Gold Ores.

Allow me, Mr. Eaton, to make a few remarks on the subject of roasting and working some of the gold ores in this State.

The article in your last issue, entitled "Treatment of Gold Ores" gives the experiments made by some Russian officers on different ores, for the purpose of ascertaining the loss of gold, if any, sustained by a metallurgic roasting process. As the results of these experiments differ widely from those obtained by several eminent metallurgists in Europe; also from those made by the writer, in this State, with your permission I will give the result of my own experiments on some gold ores, well known in this State; also the probable cause of the difference of results obtained, from those alluded to in your editorial of last week.

It appears, that the Russian officers in their experiments used gold, *chemically prepared*, i. e., precipitated from a solution of chloride of gold. Gold so prepared, as every metallurgist knows, is extremely fine—fine enough, in fact, to be held suspended in water for many hours. That even the finest of our quartz gold is much coarser than that chemically prepared is evident from the fact, that it falls to the bottom, in water, directly—a few particles excepted, which are held up by gases. We may thus understand at a glance, why the chemically prepared gold in the finest atoms, is carried off by the draft, while such loss does not happen with comparatively coarse quartz gold.

A few well established facts in my own experience will place the subject in its true light. I will first cite an experiment on the Big Blue Company's quartz rock, of Kern River, containing only a small per cent. of sulphurets of iron. It should be understood that the gold in this rock is remarkably fine; as fine as it is ever found in any gold bearing ore. No free gold is visible, as far as the writer's observations go.

These assays were made of crushed rock, without previous roasting—the sulphur serving as a means of reducing oxide of lead to metallic lead. No matt of lead. No alkaline sulphides endangering the correctness of result in smelting. The assays in each case showed a result of $150 a ton, in gold.

After a thorough roasting of the ore, without salt, it yielded, by clorination $140 a ton, in gold; the loss amounting to $10 a ton. Admitting a loss of $5 in handling the ore and loss of solution of gold—a very slight estimate—we have a loss of $5 in $150 gold ore, or three and a half per cent. in the roasting process.

This result is corroborated by another trial of quartz rock, containing about ten per cent. of arseniurets (mispickle, according to an analysis made at Paris, under the direction of the celebrated Rivot) from the Rock River Mine, Butte county, made for Messrs. Pioche and Bayerque of this city. The assay of rock made on unroasted ore indicated $620 gold. An assay of roasted ore showed only a loss of four per cent. by roasting.

Quite a number of other similar tests could be mentioned to prove the slight loss in roasting *gold ores*.

Platner, in his elaborate treatise on "Metallurgic Roasting Processes," though he finds, in a series of careful experiments in an extreme case, a loss of forty per cent. of silver by an oxydizing, roasting process, admits of only *a slight loss of gold*. The loss of gold found in some experimenting of this character he attributes to imperfect assays.

In the article in your last issue, above alluded to, I find some very curious theories advanced. Sulphurets of silver and *other products* are spoken of as formed by the process of roasting. Can any metallurgist explain how a sulphuret of silver can be a product of a roasting operation? It is generally supposed to be decomposed or transformed into metallic silver and sulphate in the roasting furnace.

Again the formation of sulphuret of gold in the furnace, is alluded to—a mere impossibility, as sulphuret of gold would be readily decomposed, at a low heat to metallic gold and sulphurous acid.

Again, the article cited in Philip's Metallurgy has no reference to a roasting, but to a smelting operation, and can therefore have no bearing on this subject.

In your next issue, I will give, with your permission, the comparative results obtained from working green and roasted gold ores, by melting, chlorination, and amalgamation in some of the improved pans, as obtained in this State for the last six years.

G. F. Deetken.

San Francisco, March 24, 1864.

Remarks:—Our correspondent is very critical in his interpretation of the line which was printed thus:—[go'd] "associated with sulphuret of silver, and other products formed by the process of roasting."

The sentence above quoted is somewhat ambiguous, we admit. The writer must have intended to convey the idea that "other products" than sulphurets were formed "by the process of roasting," or we must suppose an error in the text and read *sulphates* instead of *sulphurets*; or as the sulphuret of silver is the last sulphuret which is oxydized in the furnace, the operator might have experimented with a degree of heat which would have allowed the sulphuret of silver to have remained unchanged, while "other products formed," might have been in a condition, or in such a manner associated with the gold as to hinder the amalgamation.

We did not quote the opinion of Degerhard as implying more than the existence of a sulphuret of gold in nature—the conclusion, only, of the sentence applies to the furnace.

Our correspondent is correct in his reference to our quotation from Philip's Metallurgy. An important object in introducing the article in our last issue was to provoke discussion. This we have accomplished. We trust our correspondent will not forget his promise to give us some further information with regard to his experience in working sulphurets. We are aware it has been large and practical. His communications will no doubt be read with profit as well as interest. We trust that we may hear from others also upon this and kindred subjects.

Mechanical Puddling.—A patent has been granted to Mr. Henry Bennett, ironmaster, of Wombridge Ironworks, Salop, for an improved apparatus for facilitating the puddling of iron, the object of which, as we learn from the *Mining and Smelting Magazine*, is to apply mechanism, worked by steam or any other motive power, to assist the workmen in the process of puddling. This is effected by a shaft working horizontally endwise, or backwards and forwards like the piston-rod of an engine. This shaft can be extended to serve several furnaces, and to it is attached a connecting rod moving a sliding piece backwards and forwards in a slide, connected with which sliding piece there is a vertical shaft, at the top of which the puddler's rabble or tool should rest so as to participate in the motion of the vertical shaft; which shaft can be moved around to different angles by means of a rachet motion, so that the puddler can guide the rabble to different parts of the furnace. By means of this invention a puddler will be enabled to work with ease a larger quantity of iron in each change, thus effecting a saving of fuel, time, and labor, to change his tool as readily as before, and still to work in the ordinary way independent of the apparatus at any moment by disconnecting it. A larger furnace may also be used, and several rabblers worked at the same time, if thought proper.

Grass Valley, in Nevada county, sends to this city more gold from her mines, than any other town or city in the State, from its own particular mines.

A New Daily.—We understand that the Esmeralda *Star*, now published weekly, is soon to appear as the *Daily Union*.

WASHOE STOCK MARKET.

SALES AT THE VIRGINIA AND GOLD HILL STOCK BOARDS

Ten feet Lady Bryan at $53; Ten Caledonia Tunnel at $30; 5 Silver Vale at 5; 10 Champion at 3, buyer 30 days; 10 Gentry a 4 50; 5 Grass Valley and Napoleon at 2; 4 Rock Island at 15, buyer 30 days.

Ten feet Palo Alto at $2; 20 American Flat at 1; 10 King Solomon at 75cts.; 10 San Francisco at 2-50; 10 Pony Express at 4 50; 15 Sacramento, Sierra District, at 2; 25 Pony Express at 5 50; 25 King Solomon at 62 50; 5 Grass Valley and Napoleon at 1 75.

Two feet Bullion, Gold Hill, at 79; 5 Pony Express at 4 50; 10 do at 4 50; 5 New Oregon at 14; 40 Rhode Island at 23, buyer at 60 days; 10 Wingarduer at 3; 5 Bullion, G. H., at 79.

Ten feet Belle Vernon at 4 50; 20 New Oregon at 17 50, b 30 d; 5 Lady Bryan at 42 50, s 30 d; 5 do at 42 50, s 30 d; 10 Silver Vale at 4 75; 5 Pride of America at 2; 10 Pompey at 28.

Ten Mary Ann at 80; 50 Globe, 16; 25 do 16; 10 Leon, 20; do 20; 5 do 17; 10 White & Saaders 1 50; 10 Branch Mint, 18; 5 Lady Bryan 45; 20, Rock Island, 12 50; 40 Toatine, 11; 10 Randolph, 6; 100 Richelieu, 5.

Five feet Golden Swan, at 19 50; 5 North Ophir at 3; 10 Palo Alto at 2 50; 5 Kossuth at 3; 20 San Bernard at 5; 5 Jenny Lind at 5; five feet of Irving sold at 10; 10 Grass Valley and Napoleon at 25.

Ten feet Rock Island at $14; 8 do at 13; 10 Lady Bryan at 53; 40 South Overman at 6; 20 do at 9; 20 at 10; 150 Richelieu at 5.50; 50 Cresent at 7.50; 10 Justice at 220; 5 G. H. & V. Divide at 7; 10 do at 8; 20 do at 9; 50 Arizona at 15.50; 20 do at 16.50; 17 Globe at 17; 5 do at 17.50; 10 Contiaeatal at 3; 20 South Overman at 9; 20 do at 9.50; 10 Arizona at 15; 5 do at 16; 5 Consolidated Co. at 55, b. 30 d.; 10 Globe at 17; 20 do at 15.50; 10 do at 16; 5 New Oregon at 15; 10 Rock Island at 12.50; 10 Tontine at 11; 10 Richelieu at 6; 15 do at 6.50; 10 Jewett & Sheppard at 5; 50 Crescent at 7.50; 10 feet Irving at 10; 10 do at 12 b. 30; 25 Pony Express at 4; 10 Palo Alto at 2; 10 Kossuth at 3; $150 in Legal Teaders at 65 cents; 15 feet Richelieu at 6; 25 feet Eastern Crown Point at 2.50; 20 Pride of America at 2.50; 10 Lady Bryan at 53; 10 feet Rock Island at 14; 40 South Overman at 6; 20 do at 10; 150 Richelieu at 5.50; 100 Cresent at 7.50; 10 Justice at 220; 5 Gold Hill & Virgiaia Divide at 7; 10 at 8; 20 at 9; 60 Arizona at 15.50; 20 at 16.50; 17 Globe at 17; 5 at 17.50; 10 Continental at 3; 20 Soutb Overmaa at 9; 20 at 9.50; 20 Arizona at 15; 5 at 16; 5 Consolidated Co. at 55 b 30; 10 Globe at 17; 20 at 15.50; 10 at 16; 5 New Oregon at 15; 10 Rock Island at 12.50; 10 Tontine at 11; 10 Richelieu at 6; 16 at 6.50; 10 Jewett & Sheppard at 5.

Record of New Incorporations

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Ida S. & G. M. Co., Lower California; Geo. Pardon, H. Fisher, C. Avery, J. P. Fuller, Benj. Wallis.

Live Yankee G. & S. M. Co., Reese River: George T. Sharp, M. B. Sweeny, L. Sawyer, G. F. Walter, Wm. Kenny.

San Francisco G. & S. M. Co.; same as above.

Stony Point Tunnel Co.; same as above.

Massachusetts G. & S. M. Co.; same as above.

Waverley G. & S. M. Co., Amador county, Cal.; O. Livermore, J. Wilson, A. P. Hotaling, E. L. Billings, Geo. Stevens.

Rochester Consolidated G. & S. M. Co., San Bernardino county, Cal.; H. S. Brown, C. J. Hawley, Miles Mills, O. C. Mitchell, Peter Blohm.

Emilia M. Co., State of Guerrero, Mexico; Justinian Caire, Geo F. Hopman, Celestin Ringen, Jacob Knell, P. Lerser.

Saratoga G. & S. M. Co., Lander county, N. T.; R. S. Eells, Wm. Hollis, D. Van Houton, L. P. Smith, S. C. Blake.

Walker G. & S. M. Co., Lander county, N. T.; R. S. Eells, William Hollis, W. G. Blakely, F. Clark, S. C. Blake.

Loomis G. & S. M. Co.; same as above.

Dashing Wave G. & S. M. Co.; same as above.

Delta G. & S. M. Co., Lander county, N. T.; R. S. Eells, Wm. Hollis, J. J. Heath, W. G. Blakely, S. C. Blake.

Bueno Plata Consolidated M. Co.; Castle Dome district, N. T.; E. C. McComb, H. Sage, J. M. Eckfeldt, Geo. C. Waller, R. H. Waller.

Victor G. & S. M. Co., Alturas county, I. T.; William Ireland, S. J. Williams, F. O. Nelson, J. B. Burdick, J. N. Snydam.

Eureka Consolidated S. M. Co., Eureka district, A. T.; W. Quale, H. Gallagher, B. T. Templeton.

Webster G. & S. M. Co.; same as above.

NEVADA TERRITORY.

We gather from the Territorial papers the following names o mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Walton G. & S. M. Co., Indian Spring district; G. W. Walton, C. A. Witherell, T. H. O. Walton.

Whitman G. & S. M. Co. No. 2, Indian Spring district; C. McWilliams, J. R. Green, John Lindsey.

Enterprise G. & S. M. Co., Indian Spring district; G. W. Walton, S. S. Chinn, C. A. Witherell, J. S. Crossman, E. U. Spashett.

Gen. Banks and Grey Eagle Consolidated M. Co., Blue Sulphur Springs district; J. F. Dolliff, J. Fox, Charles Chant.

Mary De Neale M. Co., American Flat district; Ed. Patten, F. A. Ellis, John B. Harmon.

Montreal S. M. Co., Gold Hill district; —Herman, J. T. Scheel, T. Sutherland, H. M. Yerrington.

American Shield M. Co., Red Mountain district; A. McCran, N. G. Orrick, W. F. Hale.

Stars and Stripes M. Co., Red Mountain district; W. E. Naval, A. McCran, H. C. Brooks.

Argentine G. & S. M. Co., Palmyra district; N. P. Sheldon, C. McDermit, W. G. Lee, J. J. Roberts, Thomas Wostell.

Trio G. & S. M. Co., Palmyra district; M. A. French, H. C. Lincoln, F. H. Kenedy.

Mechanical Department.

An Immense Casting—The largest Cannon in the World.—The announcement was made about a year ago that preparations were making at Pittsburg for casting a 20-inch gun, that would be capable of throwing a 700-pound shell or a 1000-pound solid shot. Actual work was commenced upon this piece of ordnance in May last. Its casting required the construction of new buildings, furnaces, cranes, etc. The mould was placed in a pit. The casting was done on the Rodman, or hollow cone principle. The core consists of an iron cylinder, half an inch in thickness, through which a stream of water was kept continually running during the process of casting. This cylinder was wrapped with rope, which was covered by sand, and outside of this for a short distance from the mouth of the mould, was a sheet iron cylinder. During the casting a stream of water was kept running through this cylinder to keep it cool. The water as it was discharged indicated a temperature of about 42°

In the casting three furnaces were used, in which 80 tons of metal, pure Juniata iron, were placed. The furnaces were fired at 5 A. M., and in six hours the metal was all melted. It was conveyed from these furnaces by troughs to a common reservoir, from which it was subsequently conducted to the mould, by another trough. The process of casting is described as having presented a most animated scene, the sparks flying in a million corruscations, and the metal generating a gas, which burned with a blue flame. It was a complete success.

The casting was perfected without the slightest confusion. The rough weight of this monster piece of ordnance is about eighty tons. Its length twenty-six feet; its maximum diameter five and one third feet; its minimum diameter 2 feet and 10 inches. This gun is the largest in the world, and it is to American genius and American mechanics that the honor belongs of adding such an immense piece of ordnance to military science.

The casting was made on the 11th of February; and it was expected it would have to remain in the pit some ten or twelve days before it would be cool enough to handle. The gun will probably be placed at the narrows, as a defence of the harbor of New York. Its cost thus far has been $30,000, to which $5,000 more will be added for finishing; and how much more for placing in position will depend upon circumstances. A single shot from this monster gun, fairly delivered, would be pretty likely to crush and destroy any ship that ever floated.

A New Lubricating Material.—Mr. F. Janssen, proposes, as an improved composition to be used for lubricating purposes, a mixture of fatty matters and lime-water. The proportions vary according to the consistency which it is desired the composition should have. For a hard compound he proposes to use, of olive, colza, or neat's-foot oil, 500 parts; and lime water 2,000 parts. For a semi-hard compound he uses olive, colza, or neatsfoot oil, 1,000 parts; and lime-water, 1,000 parts. For a liquid lubricant, he uses olive, colza, or neatsfoot oil, 1,000 parts; lime-water, 2,000 parts. The lime-water is a saturated solution of lime. The fatty matters are first melted, and well mixed together, and then thoroughly mixed with the lime-water.

Correction.—In our notice of Farrand's amalgamator, last week, the compositor made us say that the machine would be constructed of various capacities, to work from 300 to 600 lbs.—it is perhaps, needless to say that we wrote "6000 lbs." instead of "600 lbs."

A Substitute for Ivory.—Messrs. Phelan & Callender, the well known billiard table makers, offer a reward of $10,000 to any one who will produce a substitute for ivory, such as can be employed in the manufacture of billiard balls.

Swift Steamers.—The City of Buffalo, a lake steamer, the Mary Powell and the Daniel Drew, Hudson river steamers, can under favorable circumstances make an entire trip at the rate of twenty-five miles an hour, running time. The two latter named have even exceeded this speed, for short distances. They are probably the three fastest steamers in the world. Their speed is equal to the average of a railroad train.

Extraordinary Power of Resisting Heat.

The power of superior animals, and especially of man, to resist high degrees of temperature, is very extraordinary, and was at first discovered by accident in the following manner:—

It is well known that the natural temperature in this country is not far from 96° Fahr. But Dr. Fordyce, formerly physician to St. Thomas' Hospital, London, went into a room heated to 120°, where he remained twenty minutes, and afterwards into a room heated to 130°, and remained fifteen minutes, while the thermometer in his hand rose only to 100°. Sir Joseph Banks, Dr. Solander and Sir Charles Blagden remained several minutes in a room heated to between 196° and 211°, the temperature at which water boils; and the latter of the above gentlemen remained eight minutes in a room heated to 220°. We have accounts of a young female at Rochefoucault, who was in the habit of staying ten and twelve minutes at a time in an oven heated to 276°, and Tillet and Duhamel informs us that they bore a heat of 299° for nearly five minutes.

Chantry, the sculptor, often entered his furnace, when heated for drying his mould, to 320°, and his workmen did the same with impunity when the thermometer was up to 340°.

A dog of moderate size was subjected to a heat of 120°—30 minutes the heat was 236. On being taken out, the bottom of the basket was wet with saliva. By the same heat, beefsteaks were cooked in 30 minutes, and in 20 eggs were roasted hard.

Most of our readers have probably heard of Mons. Chanbert, the "fire king," and who, as is stated by Dr. Dunglingson, entered an oven when the heat was raised above 400°.

And we find the living body possessed also of the same power to generate caloric. We have seen that its natural temperature is about 96°; but in the account of Capt. Parry's voyage to the Arctic seas we are told that his crew were frequently exposed to a temperature of 50° below zero, and 150° below that of their own bodies, without being frozen!

In the year 1760, at Rochefoncault, Mons. du Hamel and Tillet, having occasion to use a large public oven on the same day on which bread had been baked in it, wished to ascertain with precision its degree of temperature. Being at a loss how to proceed, a girl, one of the attendants on the oven, offered to enter, and mark with a pencil the height at which the thermometer stood within the oven. The girl smiled at Mr. Tillett's surprise at this proposition, and entering the oven marked the thermometer as standing at 260° of Fahrenheit's scale.

The female salamander assuring Mr. Tillet, who pressed her to return, that she felt no inconvenience from her situation, she remained ten minutes longer, the thermometer then standing at 288°, or 76° above boiling water; when she came out her complexion was considerably heightened, but her respirations by no means quick or laborious. This was afterwards made the subject of accurate and decisive experiments by Sir Charles Blagden, Dr. Fordyce, and others. Dr. Blagden entered a room, heated by flues in the floor, when the thermometer indicated a heat above that of boiling water. The first impression of this heated air upon his body was exceedingly disagreeable, but in a few minutes all uneasiness was removed by the breaking out of a sweat. At the end of ten minutes he left the room much fatigued, but not otherwise disordered. The thermometer had risen to 220°. In other experiments it was found that a heat even of 260° could be borne with tolerable ease. At these high temperatures, every piece of metal about the bodies of the experimenters became intolerably hot; small quantities of water placed in metallic vessels immediately boiled; eggs placed upon a frame were roasted hard in twenty minutes, and a beefsteak was overdone in thirty-three minutes. Notwithstanding the great degree of heat to which the experimenters were exposed, the temperature of their bodies was not raised. Animals are also capable of living in temperature of extraordinary elevation, even in the dense medium of water. In the thermal springs of Bohemia, in Brazil, small fishes were seen swimming in a rivulet that rises the thermometer to 88°, and fish have been found existing in a hot spring at the Manillas at 158°. The power of resisting temperature belongs almost in an equal degree to the vegetable world.

Percussion generates heat. Most of the elongated shells now made for service against iron-clad ships have no fuses; the heat evolved at the moment of impact being sufficient to explode the charge.

Strong soap suds is said to be just as good to use in drilling wrought iron as oil. It is certainly much cheaper.

The Other Side—Discouraging for Idaho.—Recent accounts from the Boise country are somewhat conflicting with regard to the richness of that region. The gold is of a very poor quality—worth only from $10 to $12 per ounce. The diggings are said to be very much scattered over an extensive region, and rich only in isolated patches, and that they will not support but a very small proportion of the thousands that are rushing thither. It is not denied that gold is found there, but it is asserted that Idaho is far from being a second California. The Butte *Record* has seen a letter dated "Elk City, Idaho Territory, February 12th, 1864," which it considers reliable, and which says: "The Boise mines, to the best of my knowledge, are, in a few instances, rich, but the country is overrun with people, and has been since its first discovery. I am in private correspondence with a merchant in Boise, and he positively asserts it's nearly played out. It will require a large amount of capital before the country can possibly amount to much. I would advise every one making grub to stay where they are." The Muscatine (Iowa) *Journal*, of a late date, notices the return of Judge Hoyt from the Bannock mines. He says: "The mining reports from that quarter have been greatly exaggerated, and that most of the money made is derived from trading. The people of the States can safely discount the reports sent from the mining district. In nearly every instance a speculator will be found at the bottom of it." The Portland *Oregonian* states that the amount of assays in the city of Portland for the year 1863 amounted to over four millions of dollars. A gentleman now resident at Colusa, who has recently returned from Idaho, says that most of the gold extracted from the Idaho mines is taken eastward by way of Salt Lake. We give the above rumors and reports for what they are worth.

Petroleum in Michigan.—Michigan is getting into a *furore* of excitement over the recent petroleum discoveries in that State. In addition to the discoveries at Albion, oil has been found in Calhoun county. On the road from Marshal to Dry Prairie there are five oil springs. In Kalamazoo county there are a series of these springs. On the Pawpaw, Dowagiac and St. Joseph rivers there are also several which contain extensive deposits. The Michigan petroleum has been carefully analyzed, and found to be of a very superior quality. It has less odor than the crude Pennsylvania oils, and will yield 20 per cent. more of the refined article than the former. Its specific gravity is 40 degs. That of the Pennsylvania oil ranges from 45 degs. to 47 degs. The Albion petroleum is easily deodorized, and when refined makes a clear, white oil, that burns freely, and is entirely non-explosive. It yields but little naptha, and stands a fire test of 140 degrees.

Owens River.—The following particulars in regard to White Mountain District, Owens River, were furnished us by Mr. George W. Edgerton, who has recently returned from a four months' tour in that vicinity. Mr. Edgerton has visited the Colorado mines and Washoe, but, as a choice, has become interested in the Owens River mines, believing they present more inducements to the mass of prospectors than either of the other:—"Deep Spring Valley is a small valley, with plenty of grass, timber, and a fine stream of water, sufficient to run a large number of mills. Cottonwood creek empties into a valley about seven miles north from the Deep Spring. It contains water privileges for several miles along its banks. In the neighborhood of this locality there are about forty miners at work. The lodes in the district are well defined, containing both gold and silver. A large number of claims have been taken up, and in some cases are being worked and ores taken out, which prospect well. The Amazon lode, which is six feet wide, is being worked, and an assay of average rock in this city gives $123 in silver and $31 in gold. The Indians, who a year ago were so troublesome, are now quiet, and all that is now needed to fully develop the mines and yield a good return to adventurers, is capital to build one or more mills to reduce the ores."

Patent Department.

A New Quartz Crusher.—The Marysville *Appeal* has seen a model which the editor was informed was made as a pattern for machinery that was to be cast at the foundry in that city, for the West Walker River Mining Company. The entire model is not yet quite complete, but is in the hands of that skillful artificer in wood, Martiness, who is getting up a new style of amalgamator for that purpose. The model is being got up under the supervision of one of the resident Trustees, and bids fair to work a great revolution in the old style of quartz mills.

Patents at the South.—According to the Report of the Confederate Patent Commission, 223 patents have been issued by the Confederate patent office since the establishment of that office; 89 patents were issued the past year, 31 of which were for improvements in fire arms, projectiles and implements of war and machinery.

A New Gold Separator.—S. W. Wood, of Cornwall, New York, has obtained a patent for separating amalgam from pulverized rock, by centrifugal force imparted to the vessel in which it is contained, the same acting in conjunction with gravity to gather and collect in a mass, the amalgam at the periphery of the vessel.

New Railway Brake.—Some interesting and important experiments have recently been made in Belgium, to test the efficacy of a new railway brake, the invention of a lady, and which consists of the sudden application of a sort of wooden drag or wedge to the point of the wheel, by which it is instantly taken up from the track and the weight of the carriage or engine placed upon the drag, the friction being transferred from the wheel to the rail. The application upon the brake is transmitted by one individual pressing upon a rod, without the intervention of a screw. The experiments with this brake were performed under the direction of the engineer of the government railways in Belgium, and in the presence of a great number of other engineers of Belgium and other countries. The results are stated to have been far superior to those obtained with any of the ordinary brakes in use.

A Valuable Invention.—G. W. Coffee, the proprietor of the Union Foundry, Aurora, according to the Aurora *Times*, has made a great improvement on that part of stamps known as the shoe, and has taken the necessary steps to procure a patent. His improvement, or rather invention, will prove of great value, since it will add very little, if any, to the cost, and the shoe, when cast as per his manner, will last much longer, and in every way be better than the old style. We have learned, from those who profess to understand the system of casting shoes and pieces of light character, that great difficulty has been experienced in getting them solid If they were cast the stem up there was danger of not getting sufficient solidity to stand the concussion, and were liable to break. If the stem was cast down then the face of the shoe would be porous and of course wear away fast. Mr. Coffee obviates all, and casts them perfectly solid, and of that temper which will insure them to wear much longer.

Double Acting Washing Machine—*A California Invention*, by Henry Ward Charles of San Joaquin county. The principle of this machine is not unlike that of many others which have a plunger operating with a horizontal motion. The superiority of this consists in having the plunger work both ways, consequently this will do double the amount of work of any other machine, of similar construction, but with the plunger operating in only one direction, and with but a slight increase of power. Applications for letters patent have been made through the Mining and Scientific Press Patent Agency.

Bullion from Washoe.—The amount of bullion shipped by Wells, Fargo & Co., from Virginia City, during the week ending March 19th, amounted to 6,970 pounds, of the estimated value of $186,620.92.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the Mining and Scientific Press. For sale by the principal newsagents.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Will be Discontinued.—After this date subscriptions not paid for in advance will be discontinued. As soon as possible bills will be presented for all arrearages. Parties who receive a paper from the office of delivery cannot evade the law requiring payment for the same. We shall in future keep no continued accounts with subscribers, and the subscriptions of all friends and patrons will be treated alike.

San Francisco:

Saturday Morning, March 26, 1864.

Now Ready.—The *Mining Directory*, published and for sale at this office. Single copies fifty cents.

☞ Mining Notices will be found on pages 202, 205 and 208, of the present issue. ☜

☞ In the absence of our usual remarks on the Mining Share Market, we refer our readers to full reports of bids and sales, upon pages 204 and 205.

Prater's Concentrator.—*A California Invention.*—This is a new machine designed as a concentrator and saver of gold, quicksilver, amalgam and sulphurets. It is designed to be placed after the ordinary pans and amalgamators, and to concentrate and save the fine particles of gold that will not amalgamate, also the finely divided quicksilver and amalgam much of which is known to escape from the ordinary pans and separators in use. This concentrator consists of a pan with a convex bottom, discharging from the center and concentrating the gold and amalgam at the circumference. The motion is applied by two small cranks, one upon either side of the pan, giving it a sort of shaking motion. It is the invention of Mr. E. B. Prater, of Washoe. A wooden machine was put in operation at the American Flat mill, some months since, by Mr. M. Hungerford, and found to operate so well that he subsequently came to this city and had an iron machine constructed at the Vulcan Foundry, which is now running at Wheeler & Thayer's Reduction Works, North Beach. We saw the machine in operation yesterday, and have no hesitation in saying that its performance was most satisfactory. It was at work upon refuse sands, which have been run out of the mill, after passing though the ordinary pan process. About four tons of these sands were run through the machine on Wednesday, and ten tons of quicksilver and three pounds of amalgam, were taken out, in addition to the sulphurets which were concentrated. A pretty satisfactory result surely for waste sands. The machine is not costly, is extremely simple in its construction, and requires but little power. Several have already been ordered. Mill men visiting the city will do well to call and examine it as above.

The "Bulletin" Putting on Airs.—On Saturday last, the Pacific Board of Brokers, according to all accounts, did an immense business in stocks, and, as usual, the Secretary handed in his different lists of sales for publication in the daily papers. The *Evening Bulletin* declined to publish the list, but came out, instead, with the following ridiculous card:—

"Sales by the Pacific Board of Brokers, March 19, 1864.—This Board to-day seems to have done a big business, particularly in Lady Bryan stock. We cannot find room for nearly seventy quotations of one stock, varying only a dollar or two in amount, and where a multitude of trifling qualifications are added as to the particular day of settlement. The individual lots of stock generally consist of ten shares each. If the Secretary of the Board cannot contrive to condense his daily report, we must omit it altogether."

The above item exhibits a marked lack of courtesy, as well as a great degree of petulence on the part of the *Bulletin* reporter. He could readily have condensed the report, as he had often done before. He well knew that the Secretary had not the time to arrange, or rather condense them, as the Board is not out from their session until after two o'clock, and the *Bulletin* requires the report not later than a quarter past two. This uncalled-for and unbusiness-like suggestion regarding the condensing of sales, irrespective of the price, within one or two dollars, "buyer's" and "seller's" time, etc., is really quite amusing to men of even ordinary business qualifications. We look upon the advice given, as the majority of the brokers do, unbecoming a school-boy, much less such a "high-toned" would-be leading paper of papers. The *Alta* without murmur or comment, took upon itself the arduous (?) duty of arranging the sales, and published them in full. The *Bulletin* acted a part unbecoming a commercial paper, and gained nothing by the act, but received instead the condemnation of the entire stock dealers. Probably, if the truth were known, the *Bulletin* would like this Board to pay a handsome figure for the publication of their sales; and thought, no doubt, the course adopted the most advisable one to bring about the desired result. The Pacific Board of Brokers are now considered upon the same footing as the first Board, and their sales are just as eagerly sought after by the public to obtain the ruling market rates. Why, then, we would ask, should they be treated thus, without there was some motive in the background? If such was their idea, we are inclined to the belief that the game is "blocked."

Santa Catalina Island.—The steamer Lewis Perry, recently arrived at this port from Santa Catalina Island, brings sixty tons of ore, containing silver, gold and galena. The ore is from the Santa Catalina Consolidated Mining Company. It is black oxide, and is found in great abundance in a large and well defined lode. The company is now raising about 50 tons per month. This ore assays about $650 to the ton. The ore is purchased by Mr. Price of the Pacific Mineral Company, for shipment to Swansea. We understand that government restriction on mining operations upon this island has been removed. At least no hindrance has yet been put in the way of working the mines or shipping the ore from the island. Prospecting operations are also still going on. Shipments will hereafter be regularly continued, and increased as the mines are developed.

Our Traveling Agent, Mr. L. Harnett will visit Sacramento and the Legislature during the coming week, with the view of increasing the circulation of the Mining and Scientific Press. We bespeak for him a cordial reception, and trust he may be enabled to do much to enhance the usefulness of the paper by adding largely to its circulation.

The Rush Northward.—The Dalles Mountain *Messenger* says that 1273 passengers arrived at the Dalles during the week ending March 5th.

The great Monitor, Monadnock, was launched at Boston, on Wednesday last.

Light's Canon, Indian Valley.—A correspondent at Light's Cañon, writes that he has been prospecting for copper in that section for some time past, and that he has never seen such masses of copper ore in any other part of the world as in the locality above designated—the mines of Lake Superior, even, will not compare with them. The Superior ledge varies in width from 15 to 18 feet, running up the mountain side 1200 feet. Several companies have located upon this ledge, which is probably the richest and most extensive thus far discovered in the State. The Superior company is now taking out large quantities of exceedingly rich ore. The adjoining claim to this is known as the Northern Extension, then the Superior, next the Eclipse, an exceedingly well defined ledge, yielding rich carbonates, purple or peacock ore, sulphurets, etc. This claim may be reached at a depth of 1000 feet by a tunnel not more than 1800 feet in length. The rock assays from 8 to 20 per cent. from the very surface. In addition to those already named, we may mention the Sovereign, the Mammoth, the Delta, the Steel Gray, Bevins, California, Plumas and others of lesser note. The time is not far distant when this will become one of the most important copper regions in the State. The only drawback to these mines now is the difficulty of transportation to steam navigation.

Copper and Silver in Plumas County.—We have received some very rich specimens of Copper from Indian Valley, Plumas county. Most of the copper ores from this region contain also both gold and silver. Three or four veins of silver ore are also being opened in Indian Valley, fine specimens from which have been shown us by Mr. Ford. Two Silver Mining Companies, the Delta and the Twilight, have been incorporated. Blood, Bollinger & Co., are working a very valuable gold mine in Indian Valley, from which they are taking from $6,000 to $10,000 per week; this mine has been worked some eighteen months; it is well opened and developed. Two other mills near by, in Round Valley, have been doing well until the water gave out. The scarcity of water in this region, the present season, is a great drawback upon mining operations. There is usually at this time of the year, from eight to ten feet of snow on the summits; the ground is now bare. There being no snow of any consequence on the mountains beyond, no water can be expected the coming season.

Correspondence.—"E. A. M." in reply to "An Enquirer," is received and will appear next week.

"J. P." from Virginia City, in reply to our query propounded to mining Superintendents has been received and will appear next week. In the meantime we hope to hear from other parties also.

Our correspondent, J. E. Clayton, we learn has gone to Sierra County to examine some mining interests in that section, which accounts for the interruption in his series of articles on the "Great Basin." We expect to hear from Mr. C. in relation to the Sierra County mines.

George S. Pollock, Agent for The Mining and Scientific Press, is now canvassing in El Dorado County.

Advertising Directory.—Messrs. Stillwell & Co., the well known advertising agents of this city, are now engaged in getting up an Advertising Directory in a book form. This directory, when completed, will form a neatly printed volume, about uniform in size with Langley's Directory, in which all our principal merchants, mechanics, etc, will have an opportunity to bring their business before the community in a new and permanent shape. The advertisements will be properly arranged under their respective business heads, with explanatory pages, etc.

Great Disaster.—The steamship Sierra Nevada which recently left for Oregon, was swamped on the Columbia Bar, and all hands reported lost. She was freighted with a large number of passengers for the Northern Mines.

THE FRENCH SAVANS AT FAULT.

The following is condensed from the *Comptes Rendus* of the Paris *Academie des Sciences*:—

M. A. Morin who has been engaged in the course of the last year in experimenting on ventilation, had his attention lately called to the effect of water in altering the unhealthy condition of crowded situations, he accordingly instituted a series of experiments, asking himself, he says, "whether the vaporization of water in air in motion was not accompanied, like dew, and like the rain of storms (as shown in the experiments of De Saussure and Poillet) by the development of a certain quantity of electricity which would change, in a salutary manner, the condition of the air, by establishing the active modification of its oxygen" His experiments do establish this point and he concurrently obtains "an acid" in the water. In conclusion he considers it proved that the effect of the injection of water is greater than can be explained by the increased moisture or the lowering of the temperature of the air.

We have translated the above for the purpose of calling attention to several articles published in the numbers of the MINING AND SCIENTIFIC PRESS of July 6th, and 13, 1863, in relation to the "Submarine Explorer" invented by Prof. Ryerson, now of this city, and for which he obtained a patent, some three years since. The working of this apparatus is founded upon the same results as those above noticed by M. H. Morin, produced by the action of water upon atmosphere in restoring to it the oxygen which has been consumed in the process of respiration. M. H. Morin's conclusion appears to be "that the effect of the injection of water is greater than can be explained by the increased moisture, or the lowering of the temperature of the air."

Some four years ago these same "effects" were noticed and experimented upon largely by Professor Ryerson. The Professor's "experiments" resulted in developing the astonishing fact that during the passage of spray through air vitiated with carbonic acid, the air is not only restored to its normal condition and fitness for sustaining both combustion and respiration but that there is actually an excess of oxygen in the air after this treatment. This fact was proved by careful analyses made by Dr. Deck, as follows:—

One bottle of air experimented upon was taken from a diving bell, after the atmosphere had been breathed over for an hour by three men, twenty feet under water, with no communication above; the candles in the mean time nearly going out, and respiration becoming laborious. When the air was in that condition a bottle of water was emptied, the air, of course, taking the place of the water. The bottle was properly secured. A fine spray of water was then allowed to play upon the vitiated air in the bell for about five minutes. After which another bottle was emptied of water and filled with air like the first.

The first bottle containing vitiated air gave the following result:—

Oxygen	16.00
Carbonic Acid	8.00
Nitrogen and Aqueous Vapor	76.00
Total	100.00

The second bottle of air collected after the air had been purified by the water spray gave the following:—

Oxygen	26.00
Carbonic Acid	1.50
Nitrogen and Aqueous Vapor	72.50
Total	100.00

The ordinary composition of the atmosphere is given as follows:—

Oxygen	20.61
Carbonic Acid	0.04
Nitrogen	77.95
Watery Vapor	1.40
Total	100,00

SNOW IN THE MOUNTAINS.—Very little snow fell in the mountains during the storm of Friday last. Only three inches fell on the summit of the Henness Pass route.

THE CITY BOARD OF BROKERS.—This new Board appears to be getting along finely. The following are their rates of commission on sales:

Funded Debt.	on par	½ per cent.
Insurance Stocks,	"	½ "
Wharf Stocks,	"	½ "
Gas Stocks,	"	½ "
Railroad Stocks,	"	½ "
Steamboat Co. Stocks,	on par	½ "
Telegraph Co. Stocks,	"	½ "
Water Co. Stocks,	"	½ "
Bills of Exchange on net amount		½ "
Mint Certificates, on net amount		½ "
Specie, on net amount		½ "

					PER FOOT.
Sale at $	1	up to $	10,		$0 25
" "	10	" "	25,		50
" "	25	" "	50,		1 00
" "	50	" "	100,		1 50
" "	100	" "	200,		2 50
" "	200	" "	400,		5 00
" "	400	" "	600,		6 00
" "	600	" "	800,		7 50

From $800 to $3,000 per foot, one per cent. on the amount of purchase or sale:

Anything above $3,000 per foot, three-quarters of one per cent. on the amount of purchase or sale.

STRUCK BY LIGHTNING—The house of Wm. Horr, on Turk street, near Jones, in this city, was struck by lightning during the thunder storm of last week. The fluid struck the top of the flag-staff, passed through the roof and down upon a rafter, from whence it made its exit, scattering the chips upon the floor of an upper piazza. This is certainly a very uncommon occurrence in this city, and the only one of the kind which ever came to our knowledge. A house in French Camp, San Joaquin county, was struck during the same storm, and its occupant, Mr. Girard, was so severely stunned as to be rendered insensible for half an hour.

PROF. PRICE'S MINING SCHOOL.—The first class of Prof. Price's School has about completed its course, and a second will commence its session this evening, at No. 5 First street, near the corner of Market. This change in the location of the class has been made to suit the convenience of the members. A large and convenient room has been fitted up as a laboratory, and all who would wish to avail themselves of the opportunity here offered of acquiring a practical knowledge of assaying would do well to be present this evening.

CONTENTS FOR MARCH.

No. 10—MARCH 5.—Communication—"Pocket Veins;" Hints to Prospectors; Sierra District, Humboldt county—Description of a Representative Mine; Sinai of the Stock Exchange; On the Loss of Gold Attending the Process of Amalgamation; Product of Petroleum; Wide West Mining Company; The Term Reese River; Mining Gossip; Washoe Stock Market; Mining News and Items; Our Mechanical Interests; Unwise Recommendation; Coal Creek Coal Company; Patent Department—McCauley's Steam Condenser, M. D. Garrard's Amalgamator, A California Invention, Etc.; A Mining School for San Francisco; A Formation of Black Oxide with a Supposed Decomposition of Nitre; The Drought and Gold Crop; San Diego Copper; Decidedly Arbitrary; Mining Share Market; New Incorporations; The Northern Gold Fields; Stock Market Reports; "Chippings;" Etc.

No. 11—MARCH 12.—Earthquakes—Their Causes and Effects; Ventilation of Mines; Communications—The Great Desert and Its Mines, No. 2; San Luis Obispo; Virginia City—Her Mines, Growth and Future Prospects; Jordan Creek; Churchill Mines; About Cloves; Mechanical Department—Railroad Switches and Signals, Steam and Electro-Magnetic Power, Steel Boilers; Remarkable Instance; Patent Department—Improvement on the Arastra, New Amalgamator; Mining Gossip; Reese River—A Comparative Review of Various Districts; The Mining Share Market; Editorials; Incorporations; Full Reports for the week of the San Francisco Stock Market; Washoe Stock Report; Chippings; Etc.

No. 12—MARCH 19.—Farrand's Amalgamator—Illustrated; Important Developments; Copper as an Investment; What Science Saves in Mining; Treatment of Gold Ores and Sulphurets; Treatment of Silver Ores; Washoe Mining Items; Mechanical Department; Mining Gossip; Patent Department; A Remarkable Indian Tradition; Mining Share Market; San Francisco and Washoe Stock Reports; "Chippings;" Etc.

THE MINING AND SCIENTIFIC PRESS contains 16 pages in each No. and 417 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal commissions allowed all who act as agents.

DEWEY & CO., Publishers.
Cor. Washington and Sansome streets, San Francisco.

We have received No 1 of the enlarged MINING AND SCIENTIFIC PRESS published by Dewey & Co., San Francisco. It is greatly improved, and gives promise of an excellent, able and reliable journal.—*Marysville Daily Appeal.*

It has been enlarged from eight to sixteen pages, and promises to be a valuable publication.—*Sierra Democrat.*

Is is full of the most valuable reading matter. Those at all interested in mining affairs should subscribe for it at once.—*Alameda Gazette.*

It is devoted to news, art, science and progress, and should receive a liberal support.—*Solano Press.*

The MINING AND SCIENTIFIC PRESS comes to us enlarged to double its old dimensions, and otherwise improved. The PRESS is the only journal on this coast devoted exclusively to mining and scientific matters, and should be read by miners everywhere. It is published weekly, at $5 per year.—*Oroville Union.*

ENLARGEMENT
—AND—
Important Improvement
—OF THE—
MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

TWO VOLUMES (OF 416 PAGES EACH) PER ANNUM.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months	$3.00
Two Volumes, one year	5.00
Five Copies, one year	20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish as full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

PROF. J. D. WHITNEY, DR. T. M. LOGAN, DR. J. A. VEATCH, REV. O. C. WHEELER, M. ATWOOD, PROF. W. H. BREWER, J. H. CHURCHILL, A. M., A. B. PAUL, H. S. BROOKS, W. WADSWORTH, T. PRICE, J. E. CLAYTON.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.
Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans,

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralogical questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the PRESS will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

CAUTION.—Parties incorporating mining companies, who desire the choice of advertising in either a daily or weekly newspaper, should be particular to cross out the word "daily" when using the form of blank by-laws sold by the stationers of this city.

Mining Notices.

McComb Gold & Silver Mining Company, Reese River District, Lander County, Nevada Territory, Office No. 1 & 2 Government House, corner of Washington & Sansome Sts., San Francisco.—Notice is hereby given that in accordance with the laws of the State of California, and a resolution adopted by the Board of Trustees of the McComb G. & S. M. Co., there will be sold at public auction at the Office of the Company, at 11 o'clock A. M. on Saturday, the 30th day of April 1864, so many delinquent shares of the Capital Stock of the McComb G. & S. M. Co., standing in the names of the following persons as will be necessary for the payment of assessment No. 1 of 50 cents per share, levied Nov. 28, 1863, together with costs of advertisement and expenses of sale, unless said assessment and charges are previously paid to the Secretary at the Office of the Company.

NAMES.	SHARES.	ASS'T.	AMOUNT.
Askins, T. J.	65	$32.50	$32.50

By order of the Board of Trustees,
L. B. WOOSTER, Secretary,
13-4t Office 622 Washington street, Room 13, S. F.

Bay State Gold & Silver Mining Company, Tumaback District, Tuolumne County, Cal.—At a meeting of the Board of Trustees of the Bay State Gold and Silver Mining Company, held the 23d day of March A. D. 1864, an assessment (No. 4.) of two ($2) dollars per share on each and every share of the Capital Stock of said Company, was levied, (for a Mill fund), payable immediately, in U. S. Gold Coin, to the Secretary, at the Office of the Company, southeast corner of Howard and Second Sts., San Francisco. By order of the Board of Trustees. J. F. HARRIS, Sec'y.
San Francisco, March 24th, 1864. 13-4t

Walipi Gold and Silver Mining Company, Moss Lode, San Francisco District, Arizona.—Notice is hereby given, that the Board of Trustees of the Walipi Gold & Silver Mining Company, at a meeting of said Board held March 21st 1864, levied an assessment of fifty cents on each and every share of the Capital Stock of said Company, said assessment payable immediately in Gold Coin to the Secretary at the Office of the Company, No. 620 Washington Street, Room No. 3.
13-5t W. AGUSTUS KNAPP, Sec'y.

Great Western Gold & Silver Mining Company, Keyes District.—Notice is hereby given, that by a resolution adopted by the Board of Trustees of the Great Western Gold & Silver Mining Company, at a meeting held on the 17th day of November 1863, an assessment of sixty-five cents was levied upon every share of the Capital Stock of said Company to be paid immediately in U. S. Gold Coin, to the Secretary, at the Office of the Company, No. 27 Government House, corner Washington and Sansome Sts.

Also, an assessment of twenty-five cents per share, on each and every share, levied on March the 17th, 1864, to be paid immediately, in U. S. Gold Coin, to the Secretary at his Office.

C. A. CRANE, Sec'y.
San Francisco, March 19th, 1864. 13-6t

Mount Eden Mining Company, Owen Lode, Gold Hill District, N. T.—Notice is hereby given that the Board of Trustees of the Mount Eden Mining Company, at a meeting held March 17th, 1864, levied an assessment (No. 2,) of fifty cents on each and every share of the Capital stock of said Company, said assessment payable immediately in U. S. Gold Coin to the Secretary at the Office of the Company, No. 620 Washington St., Room No. 3, or to FRANKLIN MORGAN, Esq., Superintendent at the mine.
13-5t H. B. CONGDON, Sec'y.

Pleayune Gold, Silver and Copper Mining Company, Bear Gulch, Calaveras Co.—At a meeting of the Board of Trustees of the above Company, on the 17th day of February, 1864, an assessment of six cents per share on each and every share of the Capital stock of the said Company was levied, payable on or before the 22d day of March, 1864. And Notice is also hereby given that the first annual meeting of the Stockholders of the said Company will be held on Tuesday the 22d day of March 1864, at the office of the Company at Copperopolis, for the purpose of electing officers for the ensuing year, for the adoption of By-laws, and for the transaction of such other business as may come to its notice. All Stockholders are respectfully requested to attend.

By order of the Board of Trustees,
L. HONIOSBERGER, Sec'y.
Copperopolis, Feb. 17th, '64. 9v8-4t

Copperopolis, March 22d. 1864.

The above meeting has been postponed until the 20th of April next.

13-td L. HONIGSBERGER, Sec'y.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Before Cutting the Leaves of this journal, stitch each No through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference.

Maryland Silver Mining Company.
Imperatrice Silver Mining Company.
Belle Silver Mining Company.
Santa Maria Silver Mining Company, Location: Santa Fe District, Lander County, Nevada Territory. The regular Annual Meetings of the Stockholders of the above Companies for the election of officers, and the transaction of other business, will be held on Friday, the Fifteenth day of April, 1864, at the office of the Secretary, No. 305 Montgomery street.

12v8-4t J. S. LUTY, Sec'y.

Give the Name of the District.

We are requested to call the attention of Secretaries of Mining Companies to the importance of inserting in their advertisements, of whatever character, the name of the district or locality. Considerable trouble arises from this neglect, as there are Companies bearing the same name, although situated in different localities. Attention to this matter will not only be a benefit to others interested in Mining Companies, but also to the Secretaries themselves.

Brown's Bronchial Troches.—These Lozenges are prepared from a highly esteemed receipe for alleviating BRONCHIAL AFFECTIONS, ASTHMA, HOARSENESS, COUGHS, COLDS, and Irritation of the Throat.

PUBLIC SPEAKERS AND VOCALISTS

Will find them beneficial in clearing the voice before speaking or singing, and relieving the throat after any unusual exertion of the vocal organs, having a peculiar adaption to affections which disturb the organs of speech.

Agents for California, REDINGTON & Co., San Francisco. 10-1m

J. M. Wolf is our Agent for Virginia City, Gold Hill and neighboring districts. j2.tf

The Law for Publishing Legal Mining Notices.

An utterly erroneous opinion having been engendered in the minds of some (through misrepresentations and interested motives of others), that the laws of this State technically require the publication of mining notices to be be made in a DAILY paper, we take occasion to quote the following positive passage concerning the publication of mining notices, from the latest statutes passed by our Legislature on the subject, March 5th, 1861, which has not since been altered or amended:—

"Notice of each such call, or assessment, shall be given to the respective stockholders personally, or shall be published once a week for at least four weeks in some newspaper published at the point designated as the principal place of business of the corporation, and also in some newspaper published nearest to the point where said mining operations are being carried on. If, after such notice has been given, any stockholder shall make default in the payment of such call, or assessment, as to the shares of stock held by him, so many of such shares may be sold as will be necessary for the payment of the call, or assessment, on the shares held by him. The sale of said shares shall be made as prescribed in the by-laws of the company; *provided*, that no sale shall be made except at public auction to the highest bidder, after a published notice of thirty days, PUBLISHED AS ABOVE DIRECTED; and that at such sale the person who will agree to pay the call, or assessment, so due, together with the expense of advertisement and the other expenses of the sale for the smallest number of whole shares, shall be deemed the highest bidder."—[Passed March 5th, 1861—Stat. 1861, p. 14.

The above is indeed plain, and we hold ourselves responsible for the assertion that a weekly issue of a mining notice is as valid as that of a daily. By publication in the MINING AND SCIENTIFIC PRESS, a wide circulation is given to notices, particularly among miners and shareholders in this city and throughout the State and Nevada Territory. A weekly publication is also secured at a material saving in cost to shareholders.

Esmeralda.—A partial "clean up," only, of the first six days' run of the new Antelope mill yielded 3000 ounces of bullion, worth about $12,000. It is rumored that the Cortez and Utah are about arranging the disputed matter between them, and compromising the whole affair, which will, if consumated cause the pending suit to be withdrown. The new mill of the Durand company is nearly ready for running. The lode belonging to this company is very promising. Lady Gertrude Tunnel Company, on Silver Hill, recently piereed a fine ledge and still continue their work. Their tunnel is a fine locality, and suffieiently low to insure a prospect many feet from the surface. This manner of prospecting says the *Times* will prove, to a great extent, the value of the ledges they may strike. Workmen in the Elematah Copper Claim, near Ophir, recently struck a small vein of quartz in the main lode, that so far has proven quite rich. Eighteen ounees of gold have been taken out of a few hundred pounds of roek, and consequently holders of shares are in good spirits. The main lode is some five feet thick. The Bamboo company are driving their work and taking out rock. Their latest reported crushing at Winter's mill shows their bullion to be above the average richness in gold, it being $5.75 per ounce.

The discovery of new and rich placer diggings is reported on the head waters of Bishop's Creek, twelve miles west of Owensville. From seventy-five to eighty persons are there prospecting.

Washoe.—The Gold Hill *News* learns that a number of new mills are to he put up in that vicinity the coming season, and thinks that hy the time they are ready they will find enough to do.

The Desert district reports still continue favorable. Matters at these mines are said to be looking better thau for some time past, the ledges on being opened proviug even rieher than was at first supposed. Some specimeus of rock just brought in from the claims of the Golcouda Company, Mark Antony and Cleopatra ledges combined, says the *Union*, heat anything we have yet seen from that District, being full of gold spangles, and of the purest quality. It is estimated that this rock will pay $10,000 to the ton.

The Mayflower and Allen, now consolidated, is said to be "looming up." They are sinking a shaft from which, at the depth of 100 feet, they propose drifting to each elaim. Both ledges are well defined. The Mayflower, especially, assays remarkably well.

The Reese River *Reveille* says that "tons" of ore are daily being taken from the North Star miue at upper Austin, of a quality superior even to the best ores from the Gould & Curry, a portion of which is imperfectly worked at the Oregon mill, while the tailings are earefully saved for a future proeess. The North Star is said to he the most thoroughly developed mine in that neighborhood, and is opened to a depth of 100 feet. The chief charaeteristie of the orc is black sulphuret, iu which native silver from mere specs up to spangles the size of a dime are abundant.

The De Soto, an extension of the Sheha at Humboldt is now attracting considerable attention. The regular Sheha ledge has been struck in this mine at a depth of 80 feet, hy a tunnel. The mineral is said to be identical in charaeter with the Sheba, and nearly one half wider, with well defined walls. The Sheba, according to the *Register*, is making preparations for an active summer's work. Arrangements are being made to put up the proper maehinery for working this minc, which will be ready for operation in June next. The ores will be subjeeted to a roasting process, in a reverberatory furnace. A large amount of reliahle ore has been accumulated at the mouth of this miue.

The Gem of the Sierra is highly spoken of. The ore from this mine is easily worked. The last crushing of 3¼ tons of ore yielded at Fall's mill $1,498.

The Salt Springs salt mines, on the Reese River road, N. T., cover 1,800 aeres, and the salt is from fifteen to twenty feet deep. The mine produces thirty tons of salt per day, sacked for shipment.

WANTED,
Gold Quartz suitable for Cutting Jewelry.
By FRONTIER & DEVIERCY.
437 Pine Street, San Francisco.
au31tf.

A. S. HALLIDIE & CO.,
WIRE ROPE MANUFACTURERS.
Established 1857.
Office, No. 412 Clay street—Works, North Beach,
SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for
HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

Must be seen to be Appreciated!

THE FLORENCE!

A GREAT IMPROVEMENT!

This Celebrated
NEW SEWING MACHINE
IS ACKNOWLEDGED TO BE
THE BEST IN THE WORLD!

IT MAKES FOUR DISTINCT STITCHES!
IT FEEDS THE WORK EITHER WAY!
WILL SEW OVER THE HEAVIEST SEAMS,
WITHOUT CHANGE OF TENSION!
IT SELDOM, IF EVER, DROPS A STITCH!
IT SEWS WITH SILK OR COTTON THREAD EQUALLY WELL!
IT RUNS LIGHTLY, SEWS RAPIDLY AND IS ALMOST NOISELESS!
IT DOES THE HEAVIEST OR FINEST WORK WITH EQUAL FACILITY!
IT MAKES A STICH ALIKE ON BOTH SIDES OF THE FABRIC, USING ONLY HALF THE QUANTITY OF THREAD NECESSARY FOR THE OLD FASHIONED CHAIN-STICH MACHINES!

WHILE IT POSSESSES ALL THE GOOD QUALITIES OF others, and has many advantages over any and all of them, the FLORENCE is sold at corresponding prices with other first-class Machines. We
WARRANT EVERY MACHINE
To be all that we claim for it, and will give a WRITTEN WARRANTY if required.

AGENTS WANTED in all the principal cities and towns on the Pacific coast.
Send for Circulars and samples of sewing.

DON'T BUY A SEWING MACHINE UNTIL
YOU HAVE
SEEN "THE FLORENCE!"

WHEELER'S
Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep2I

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

No. 240 Montgomery street, San Francisco.

* NOTE.—100 shares in the name of J. H. Lyon will be sold subject to assessment No. 9, of one dollar per share, levied March 12, 1863.
12v8-5t DAVID WILDER, Secretary.

Albion Gold & Silver Mining Company.
Asia Gold & Silver Mining Company.
Jupiter Gold & Silver Mining Company.
Live Yankee Gold & Silver Mining Company.
St. Paul Gold & Silver Mining Company.—Notice is hereby given, that at a meeting of the Board of Trustees in each of the above named companies, held at their office in San Francisco, December 19, 1863, an assessment of fifty cents was levied on every share in the capital stock of each of said companies, payable immediately, in United States coin, to

DAVID WILDER, Secretary,
12v8-4t. No. 240 Montgomery street.

Sonoma Ledge Silver Mining Company, Reese River District, N. T.—Notice is hereby given that at a meeting of the Board of Trustees of the Sonoma Ledge Silver Mining Company, held at their office in San Francisco, March 12, 1864, an assessment (No. 4) of one dollar, was levied on every share in the capital stock of said company, payable immediately, in United States coin, to Julius Shichel, at Austin, N. T., or to DAVID WILDER, Secretary,
12v8-4t. No. 240 Montgomery street.

Office of the Montezuma Gold & Silver Mining Company, No. 52 Government House, corner of Washington and Sansome streets, San Francisco, Feb. 5th, 1864.—Notice is hereby given, that a sufficient number of shares of the Capital stock of the Montezuma Gold and Silver Mining Company, standing in the name of the following person, will be sold at public auction, at the sales room of Jerome Rice & Co., No. 327 Montgomery street, on WEDNESDAY, March 9th, 1864, at 11 o'clock A. M., to pay an assessment of 12½ cents per share, levied April 27th, 1863, together with expenses of advertising and sale, unless said assessment is previously paid with accruing charges—viz: Hugh McCormick; 247 shares; amount due, $30,87½. By order of the Board of Trustees.
6v8-5t C. A. CRANE, Sec'y.

San Francisco, Wednesday, March 9th, 1864.
The above sale is postponed until Wednesday, March 16th, 1864.
C. A. CRANE, Sec'y.

The above sale is further postponed until Wednesday March 25th, 1864. C. A. CRANE, Sec'y.

Poindexter Silver Mining Company, Reese River Mining district, N. T.—Notice is hereby given, that at a meeting of the Trustees of the above named Company, held the 20th of October, 1863, an assessment of Fifty cents per share was duly levied on each and every share of the Capital Stock of the Company; and at a meeting of the Trustees held Feb. 27th, 1864, an assessment, No. 2 of fifty cents per share was duly levied on each and every share of the Capital Stock of said Company, payable immediately to the Secretary, in U. S. Gold Coin, at his office, No. 35 Government House, or to the Agent, WM. ALPHENS SMITH, at Austin, N. T.

San Francisco, March 1st. (10v8-1m) JAS. C. NORRIS, Sec'y.

Santa Maria Silver Mining Company, Santa Fe District, Lander county, Nevada Territory. Office 305, Montgomery street, San Francisco, Feb. 23, 1864.—Notice is hereby given that at a meeting of the Board of Trustees, held this day, an assessment (No. 2) of fifty cents per share was levied on each and every share of the capital stock of the above company, payable immediately, in gold coin, to the Secretary, at his office. By order of the Board of Trustees. (9v8-4t.) J. S. LUTY, Sec'y.

Bodie Consolidation Gold and Silver Mining Company, No. 2.—Office, southwest corner of Clay and Montgomery streets, San Francisco.—Notice is hereby given, that in accordance with an order made on the 4th instant, by the Board of Trustees of the Bodie Consolidation Gold and Silver Mining Company, No. 2, there will be sold at public auction, by Jerome Rice & Co., at their salesroom, No. 327 Montgomery street, San Francisco, on WEDNESDAY, the 27th day of April, A. D. 1864, at 11 o'clock A. M., a sufficient number of shares of the capital stock of said Company, standing in the names of the following persons, as may be necessary to pay the assessment levied January 14th, 1864, together with the expense of advertising and sale, unless said assessment and charges are previously paid:

		ASS'T PER SHARE.	ASS'T DUE.

Scottish Chief Consolidated Tunnel & M. Co.	10 cts.

All the mines of the above named Companies are located in Reese River Mining District, Lander county, Nevada Territory. By order of the Board of Trustees. D. B. FRANCIS, Sec'y.
Office, No. 509 Clay street. 11v8-4t

Bodie Bluff Consolidation Mining Company, Bodie District, Mono Co., Cal.—February 27th, 1864.—At a meeting of the Board of Trustees of the above named Company, held this day at the Secretary's Office in the town of Aurora, the following among other proceedings were had, viz:—*Resolved*—That an assessment No. 3,) of one dollar upon each share of the Capital stock of the aforesaid Company be and the same is hereby levied, payable immediately in U. S. Gold Coin, or its equivalent in Legal Tender Notes, to the Secretary, at No. 614 Montgomery Street, San Francisco. *Provided*—That all the Stock upon which the assessment (No. 2,) of Fifty cents per share, levied June 13th, 1863, has been paid, only fifty (50) cents per share shall be paid under this assessment.

Resolved,—That the Transfer office of the Company be removed to San Francisco. By order of the Board of Trustees.
11v8-5t F. K. BECHTEL, Sec'y.

Pride of Nevada Mining Company, Reese River District, Nevada Territory.—Office, No. 620 Washington St., San Francisco.—Notice is hereby given, that the Board of Trustees of the Pride of Nevada Mining Company at a meeting of said Board, held March 8th 1864, levied an assessment (No. 1,) of fifty (50) cents on each and every share of the assessable stock of said Company, said assessment payable immediately in U. S. Gold Coin, to the Secretary, or to A. E. SHANNON, Superintendent.
11-4t H. B. CONGDON, Sec'y.

Billet Gold & Silver Mining Company, Geo. Scott Ledge, Augusta Mining District, Lander County, N. T.—Notice is hereby given that at a meeting of the Board of Trustees of this Company, held this 5th day of March, A. D. 1864, an assessment of Twelve and one half (12½) cents per share was levied upon each and every share of the Capital Stock of the Company, payable immediately to the Secretary, in U. S. Gold Coin, at his Office, No. 509 Clay Street, San Francisco, or to S. F. AMBLER, at Austin, N. T. By order of the Board of Trustees. D. B. FRANCIS, Sec'y.
11v8-4t

Emmett Copper Mining Company, Office No. 645 Clay Street, San Francisco, February 19th, 1864.—Notice is hereby given to the Stockholders of the Emmett Copper Mining Company, that an assessment, No. 4, of 37½ cents per share was this day levied on each and every share of the Capital Stock of said Company, payable immediately in United States Gold Coin, to the Secretary, or to L. HONIGSBERGER, Copperopolis.
8v8-4t M. G. ELMORE, Sec'y.

Contents:

No. 14—April 2.—Physical Growth of San Francisco; Owensville Correspondence; Mill Valley; Copperopolis Correspondence; The Gold Hill Mines, Washoe; Crude Bullion; Reese River Correspondence; Keith's Desulphurizing Process; Copper in an Iron Mine near Marquette; British and American Copper Mines; The Vassar Female College; The Colorado Mines; Mining Gossip; Mining Share Remarks; Stock Reports; Washoe Stock Sales; Incorporations; Chippings and Items.

[Written for the Mining and Scientific Press.]

Physical Growth of San Francisco.

BY A SPECIAL CONTRIBUTOR.

Our city is extremely well watered. This is a trite and common truth; but few people, probably, have anything of a competent idea of the magnitude of the works, to which we are indebted for our full supply of the excellent gift of water. That which is furnished by the San Francisco Water Works, is drawn from Lobos Creek, a beautiful stream of pure, soft water that empties into the Bay near Point Lobos, or about three and a half miles from the Plaza.

THE RECEIVING RESERVOIR

Is on Black Point; and from this the water is raised by means of steam pumps to the Distributing Reservoir on the adjacent hills, the highest being three hundred and fifteen feet above high water mark. The capacity of this higher reservoir is 3,600,000 gallons; that of the lower is 7,800,000 gallons; and the supply drawn from this source amounts to between two and three million of gallons daily.

THE SPRING VALLEY WATER WORKS

Are not yet in complete operation. A large dam that will cover 100 acres of land and contain 1,500,000,000 gallons of water, is now being constructed. The work is of stone, and of the most solid and durable character. This vast retaining reservoir will be filled during the rainy season, and only be drawn from as may be required. The main supply of these works is drawn from various branches of the Pilarcitos Creek, in the Coast Range of mountains, about fifteen miles, in a southerly direction, from San Francisco. As the stream is taken at the hight of 700 feet above the level of the sea, it carries in its descent an immense impetus and head power. It is conducted through the main Coast Range, by means of a tunnel 1,500 feet in length, from the east end of which it is carried into Lake Honda back of the Mission, by a flume thirty-two miles in length, six miles of which are laid in iron pipe. This lake furnishes a fine natural reservoir, and is filled to the capacity of 100,000,000 of gallons.

In respect to water we are thus munificently providing for the future. But we are not so well furnished with facilities for taking the air on a grand scale; and it may be asked, in passing, how will the American genius meet this great demand, which, as yet, is so meagerly answered. Our city will soon rank among the largest and richest in the world. Shall we then have nothing that will correspond with Boston Common, Cove Park of Providence, and the numerous parks and Elysian Fields of New York, where our people can at once entertain and refresh themselves by objects of taste and beauty, with sufficient exercise in the open air? Something on the plan of the Tuilleries and Jardin des Plantes of Paris, which should combine with the pleasures of the walk valuable collections in natural history and botanical gardens, open and free to all, would be something worthy the citizens of the freest city in the freest land under Heaven. The same difficulty that has pushed all the mercantile part of the city out into the Bay, stands in the way of a Park—the want of land in the right neighborhood. But if we have it not here, we must go where it is; and with ears that traverse all our suburbs, there will not be so great difficulty in this. A site should be secured at an early day, before the land is all engrossed and unattainable. Men of taste and men of skill, thinkers and workers, citizens and legislators, see to it, that the future San Francisco has a park worthy a people so established, and so endowed.

In the few years of occupation there have been great strides in our municipal system, as well as elsewhere. From the remains of the Vigilance Committee came forth the People's Party, with a power that has made itself felt in salutary measures ever since, so that from being the worst governed city in the world, we may now fairly claim to rival the most advanced, in the excellence of our municipal arrangements.

In this we have the aid of a Police that is second to none. One Policeman is appointed in each ward; and it is required that he be of good moral character; and recommended by at least twenty of the citizens of the ward.

The Fire Department is equally efficient in its operations. It consists of 1,023 men, forming fourteen engine, two hook and ladder, and two hose companies. They have just added to their force two fine and very powerful steam fire engines; and they are soon to have a communication by telegraph, so as to waken all the wards simultaneously. There are in our city thirty-four cisterns, many of them substantially built, whose united capacity is 1,470,000 gallons of water.

Our commerce has sustained its full share of the common growth, since the primitive period when Mr. Jacob P. Leese planted himself on the shelly beach of Yerba Buena, and established the first mercantile relations in San Francisco. This was in 1837.

From statistics officially furnished I gather the following facts in relation to our commerce. The total amount of tonnage of vessels cleared from the port of San Francisco for foreign ports during the years 1854—63 inclusive is 3,159,621 tons. The total amount of tonnage of vessels entered the port of San Francisco, from foreign ports, during the same term is 2,036,592 tons. The excess of 1,123,029 tons cleared foreign, over those entering foreign, is owing to the fact that a large amount of tonnage (clipper ships) arrive here from New York, Boston and other eastern ports having domestic cargo, and proceed from this port on foreign voyages.

The value of Imports for 1863 was $10,000,000, and the value of exports for the same year, was $10.531,205, to which may be added gold and silver bullion, via. Panama, to England, about $30,000,000. The principal articles of import are cotton, silk, flax, hemp and iron manufactures; brandy, wines, segnrs, sugar, coffee and rice. The principal articles of export are gold and silver bullion, machinery and other manufactures of iron, hams, bacon, butter, lard, oil, cottou and woolen goods together with every kind of provisions and liquor. Wheat and flour compose a very important item; and here it may be observed, that the California wheat, as it contains a much greater proportion of the nutritive principle, or pure gluten, than any other, also has a greater reputation, and commands a higher price than any in the world.

TONNAGE.

Steamers enrolled (over 20 tons)	12,741	tons.
do registered	7,218	"
Sail vessels registered	31,906	"
Sail vessels enrolled (over 20 tons)	25,224	"
do licensed (under 20 tons)	1,862	"
Total	78,951	"

The amount of tonnage built at San Francisco in 1863 was about 4,500 tons.

Our chief trade is with China, Japan, Mexico, British North America, the Islands of the Pacific, (more particularly the Sandwich Islands) England, France, Germany and other European countries. A large amount of trade, paticularly dry goods, from England, is via. Steamer and Panama Rail Road.

And now, too, instead of creeping at the old snail-pace, that took at least a week or ten days to cross the bay, we have put on the more than "seven league boots" of steam power, with all the improvements of modern navigation. Yes; times are greatly changed since the gay little craft known as "The Steamboat," *par excellence*, made her experimental excursion around "Wood Island," and her first trip to Santa Clara. We have now at least twenty ocean steamers of the first class, that connect this with the East, North and South; three daily lines of large steamboats, that ply between San Francisco and Sacramento, Petaluma and Stockton, touching at all the subjacent towns; four lines that leave every alternate day for Napa, San Jose, Sonoma and Suisun, and three lines of ferry boats to Alcatraz, Contra Costa and Oaklaud, that leave at stated hours several times a day. And so we advance; and yet it is only sixteen years since "*The* Steamboat" was the pet plaything of the whole Bay without a rival, or fear of competition. Could Mr. Leidesdorff have foreseen this, or Mr. Leese when he opened his goods so gaily to the visitors, who had assisted him in the celebration of the first Fourth of July kept in San Francisco; or could Captain Richardson, when he occupied the whole harbor with his two small sloops, engrossing all the proper commerce by transporting hither for the supply of seagoing ships that casually entered, a few tons of hides, tallow and farm produce? But a tithe of what we now see set forth, in the full array of unimpeachable fact, would then have been regarded as extravagant and unwarrantable expectation. The great question now is, having achieved all this, what shall be done next? How shall we make the future worthy of the past? This is a problem worthy of our best attention, and one which, as a people, we must solve. The eyes of the whole world are fixed upon us; and it remains to be shown whether so grand a beginning *could* fall back into the dull, stale common-place of the world at large.

One of the most important features of domestic policy is the maintainance of Home Insurance Companies. These are the truest signs of health in the body politic, because they indicate a sense of security, and the capacity of self protection. Nor is this the only advantage; but the large sums which are paid into the several policies, instead of being sent abroad to support foreign companies, are retained at home; and the whole community will be thus enriched. The present aspect of business in this direction is healthful and encouraging. Several new companies have been established during the past year, while others still are going into successful operation, with an aggregate capital of more than a million of dollars.

Another healthy feature of our municipal association, is the great number of protective interests, which it embraces and maintains. Almost all the branches of manufacturers and mechanics are associating themselves for self improvement, and self protection. This is well, for many reasons. The social interests which they involve, warm our working-day life with the brightness of occasional holidays; while, on the other hand, the frequent comparison of work, and the effort to compare well, excite emulation and an honorable ambition for artistic excellence, be the work ever so humble. And when we superadd to these, the mental improvements which frequently

flow in, we see in the wisdom of that arraagement by which mea of the same craft hind themselves together, something more thaa mere helps in sickness, privation or death; for by such unions life itself is eariched and made more beautiful.

In this placo our Homestead Associations deserve a particular notice. Any motive or ohject, which tends to gather up aad consolidate small saviags—to fix and reader fruitful, otherwise fugitive sums of moaey, must he, hoth as regards the individual aud the community, an operation of the truest conservatism. Anything, in short, which teads to relieve the poor lahoring man, or the self dependent widow, from the exhaastiag drains of the rent system, must be a commoa heuefit. Whoever in the space of a few years, converts the teaaat of another man, into the iadependent proprietor, as well as occupaat, of his own house, must he his henefactor. Surely, it is hetter to pay the Association, and own the house, where one can he free to strike root, and make improvements in a general way, than to pay the landlord—perhaps an equal. or greater sum—and yet he always a homeless wanderer on the face of the earth.

Statistics of our Military and Naval force should have come in here hut I shall he obliged to defer them to another time when the couaty of San Francisco will he described.

[Written for the Mining and Scientific Press.]

Owensville Correspondence.

Messrs. Editors:—I left San Francisco on the 19th of Februaary and arrived here three days ago, having been absent since the 15th of Decemher. I find everything in the valley in a flourishing coaditioa—far hetter than I had anticipated. My ronte hither lay by way of Stockton, Hornitos and Millerton to Visalia; from thence, on horsehaek, by way of Liua's Valley, Kern river and Owen's lake. This route is a very good oae for parties coming through at this seasou of the year. The McFarland wagon road is nearly completed, and will he passahle for two and four-horse teams hy the first of April. This road, whea finished, will he one of the finest grades in the State, and hy reason of the lowness of the Pass will never he hlocked with saow. Parties are also at work opening a pack trail from Visalia to Owens lake. It will soon he opened for travel.

As I came up from Owens lake, my attention was called to the important change which has recently taken place in the country. Large numhers of farmers have settled in the valley, and are now fenciag and improving their land. At the Lone Pine, a short distance above the lake, and also near Camp Independence, opposite San Carlos, there are heavy improvements going on. Bishop's Creek Valley, opposite this place, is thickly settled, there haviag been over one hundred and fifty quarter sections of land located within the last four months. Our farmers are in much need of lumher for fenciag and buildiug purposes, although for the former they are ditching, while for the latter they use adobes. At Owensville, however, their chief huilding material is a light porous rock, found some three miles ahove the town, which is so light that four yoke of oxen can haul three perch at a time. There are several fine huildiugs of dressed stone now erected, and others alreadv under way. There is hut one sawmill now running in the valley. It is situated on Big Pine Creek, some fifteen miles south of this place. There are parties here who have located a mill site on Bishop's creek, and are about to send for their machinery.

THE NEW PLACER DIOGINGS.

There has heen, and still is, considerahle excitement about some placer mines lately discovered on Bishop's creek, some twelve miles from here. I am told they have found some shallow gulches that will pay to work, and parties are now prospecting for deep diggings. They all seem to think they have rich placers. I have seen some very fine prospects from there, amountiag, in some instances, to fifteen cents to the pan. The gold is very hright and quite fine, seldom exceeding the size of a pin-head, and has the appearance of quartz gold. Very rich quartz has also been fonnd in the same vicinity, in some of which the gold is plainly seen. The quartz mines in this region are mostly in process of rapid development. San Carlos and Bend City, two rival towns in Inyo district, are growiag very rapidly, and present a lively appearance.

The miners in the vicinity keep up a constant roar, one hlast following another in quick succession. The principal mines now at work are the San Carlos, Clara, Santa Rita, Charleston, Nelson, Molten and Lawrence. The Chrysopolis mines, eight miles above San Carlos, are also being worked. Of the miaes in the White Mouutain district I know hut little, further than they are at work on Miaeral Hill and the Palmetto and Grey Eagle lodes. Of the miaes in this vicinity, the Rubicon, Marathon, Alameda and Rhode Islaad Companies are hard at work. Their ledges are mostly silver-bearing rock. Two new miaiag districts have heen formed lately—one called Montgomery, formed out of the Lone Pine and Slate Mouutain districts, is highly spoken of. I have seen soaie very rich silver ore from that district, in character not unlike the Washoe rock. The other is called Joaquin district, on Bishop's creek.

With regard to Indian troubles in this valley, they are at an end; there are too maay whites here now for the Indians to ever he able to give us much more trouble. They bave already treated for peace, aad are allowed to come into the valley. Many are at work for the farmers. The emigration to this valley is quite brisk, although the drouth on the other side of the Sierra keeps many back that would otherwise come. There is quite a contrast between the Saa Joaquia plain and this green fertile valley.

Limestoue is heing huraed, with complete success, ou Silver creek, some three miles east of this place.

Owensville, March 14, 1864. Concord.

[Written for the Mining and Scientific Press.]

Mill Valley.

Mill Valley is the name of a new miaing district hetween Jesus Maria and Murray creeks, and ahout ten miles from Mokelumne Hill. As yet hut little has heen douo here heyond locating claims and incorporating compaaies to work them. As hy the laws of the district all claims must he worked in April, we may soon expect to see lively times here.

The Salamander Compaay is located on the western edge of the district. They hold 4,000 feet, a share to a foot; capital stock, $80,000. This company is already at work, with day and night shifts, running a tunnel to "cross-cut" the veins at a depth of 100 feet. A sample of 500 lbs. from the croppings, worked at the South Park mill, in San Francisco, yielded a result upon which the company felt fully warranted to commence operations. The rock produced gold and silver. Mr. Hamilton, the foreman of the company, iaforms me that it is their inteution to erect a water-power mill, so located that the ore from the mine can he dumped, through a shuto, direct to the stamps. This mine is owned chiefly in San Francisco—Mr. Jackson, of the Paeific Temperanec Houso, and Mr. Gallagher, of Front street, being the priacipal owners.

About two miles north of this is the Chilean Company's claim, known as the "Whisky Slide claim." This has heen hut recently opened, and is supposed hy some to he a continuation of the Salamander; hut of this I am in doubt, as the rock from the two claims is quite different, the latter being much decomposed and holding much pure gold, which ean he hammered out in considerable quantities, and is the only method as yet employed hy this company for its extraction.

Still farther north is another claim, owned chiefly hy Chileans, and known as the Esperanza claim. It is located on the creek of that name, which forms the north fork of the Calaveras river. This vein is said to carry hoth gold and silver, as well as copper; but is valued chiefly for its yield of the latter metal. I am not aware of the size or extent of this claim, nor number of shareholders, suffice it to say that they have a good prospect, and seem to he aware of that fact. This vein I think to be a contiauation of what is known as the Slug Gulch vein, situate in El Dorado county, as the mineral bears a strong resemhlaace, and is found close to the Limestone rauge, in each locality.

Before closing this letter, allow me to say that the letters of your traveling correspondent, "L. H.," have given a fresh impulse to miniug in this section, by creating a confidence in this hranch of industry, herctofore looked upon as ephemeral. R. W. D.

Mokelumne Hill, March 27, 1864.

The Pioneer Foundry, at Virginia City, is said to be doing quite an extensive business. The arrangemeuts are such that castiags of 6,000 pounds are readily made. The average aggregate weight of the castiags made here is hetween five aud six tons per day.

Rich Ore—Ore from the Great Central mine, Arizoaa, yields 63 per cent. of copper and $186 of silver per ton.

Copperopolis Correspondence.

Editor Scientific Press:—As you have had no coatributions from this region for some time, it may perhaps be agreeable to some of your readers to know, notwithstanding the depreciation of mining stocks in your, city, that hereabouts we are moviag on, in the even tenor of our way, with as much zeal and confidence in the ultimate success of our miues (harriug "Wild Cat") as if thore were no such thing as Stock Brokers.

Prospecting is again heing renewed, aad the indications are that as much will he dono in this liae, the coming spring and sumuer, as has heeu during tho two years last past. All are fully aware that the time for "Wild Cat" speculation is over; but the time has not yet come when good ore fails to ho worth money. Aeting upon this hypothesis, men in this part of the miniag regiou are makiag up their minds to rely less on *duping* foreign capital, aud more upon their own energies aad resources. Thus you see that the copper miaing incorporations that have heen formed, the last two or three months havo a more direct eyo to busiaess and economy, than stock johhing in San Francisco. First, in this class, is a new discovery lately incorporated uader the name of

"MOUNTAIN TOP."

It is situated in the top of a mountain, as its name indicates, ahout four miles east of Copperopolis. The company have sunk a shaft upon the lead to the depth of twenty feet, and have already taken out five or six tons of good ore. For the amount of lahor done, the prospect far surpasses aay thiag I have seen in this region outside of the Copperopolis leads.

Such a prospect, during the excitement of last year and the year previous would havo sold readily for fifty dollars per foot. But for want of confidence, or lack of money, and perhaps both, ao stoek has yet been sold for more than ten dollars. It is mainly owned by laboring men, who seem rather determined to tax themselves to develop it than to dispose of their flatteriug prospect for a nominal sum.

Next in order and in the same vicinity is the

TABLE MOUNTAIN COPPER MINE.

This miae having been worked for the past two years, is too well known to need any description as to location, etc. The company have continued to work the mine. through the winter, by siaking a shaft upon their lead to the depth of one hundred and forty feet. At this depth it is about four feet wide, intermixed with "flocking," slate and ore; the quantity and quality of the ore is improving, and from appearances they are nearing the water level; where it is confidently helieved they will have a good body of ore. Although the actual quantity of number one ore taken out is small in proportion to the lahor done, yet to that depth the lead is unbroken, and is as well defined, with as good walls as any lead I ever saw. A large quantity of second class ore has been takeu out, and when the time comes for dumping these ores for machinery, as is doue elsewhere, this mine may he set down as a paying institution, if not long before that time. They have now commeuced to drift upon the lead at the depth of one hundred feet, and are taking out number one ore at the rate of a ton per day. You may look for a good shipment from this mine hy the first of May. Observer.

Copperopolis, March 26, 1864.

What "Crude Bullion" is.—The Gold Hill *News* says:—"What is spoken of hy the papers of this Territory as "crude hullion," crude "amalgam," etc, is the cakes of silver, and what other metals there are mixed with it, as they come from the retorts of the various mills. It is sometimes in large square cakes of the same size as the pans in which the amalgam was placed for retorting, and again in lumps of no particular form, just as it crumhles up on being taken from the retorts. When a very strong heat is applied in retorting, the silver partially melts, and a solid cake is the result; where the heat was not so strong, the cake more easily hreaks to pieces. This retorted amalgam, whether in cakes or crumhled into lumps, is the crude bullion as it is received hy the assayers to he moulded into solid bars aad assayed.

A Gold Hill Foundry.—We are iaformed that the "Pioneer Foundry and Machine Shop," advertised in the Press hy Oliver Hyde, Jr., is one of the hest and most thoroughly conducted establishmeuts in the Territory.

Reese River Correspondence.

Having a good fire, a bright camp, and an hour to spare before going to bed, I will comply with a request which you made some time since, and give you my opinion of our country and some of its mines. The success, eventually, of this portion of Nevada Territory, as a mining region, is no longer a matter of doubt; it is a fixed fact. It is however a matter of time and capital. The wealth is here, to be disemboweled from the hills on the homeopathic plan of like curing like; if you burn your finger hold it to the fire; if you freeze your feet put them in snow. If you want to get silver in these mines, you must put capital into them. There is not much doubt that in five or ten years, incomes, such as are rare now in America, will be derived from our silver mines; it is equally certain that the nomadic race who wear their ruffles where the seat of their trowsers ought to be; and who, in the possession of hundreds and thousands of feet, under the influence of "Tarantula juice" boast of their prospective wealth, will either be idlers and vagabonds, or working by the day for those who are now trying to extract the metal from the rock, and not depending for a living upon selling "feet."

We have all been most agreeably disappointed in the winter weather here. The winds which were said to prevail in the Territory, have not been turned loose; the temperature has been delightful, so much so as to elicit approbation from persons hailing from all parts of California. No country can boast of a milder or more pleasant winter so far; incomparably better than the heat and dust of summer.

In regard to the preference to be given to any particular district, or any particular mine, each person seems to be guided by the interest which he has in them. The disputants have not yet decided emphatically which are the best—the small ledges in the granite formation about Austin, extending some five miles north to San Francisco Cañon, and about three miles south; or the much larger and more imposing looking ledges in the slate formation, outside of those limits. The small ledges in granite are immensely rich from the very surface. They vary in width from two or three inches to five and six feet on top; invariably I may say widening out as you go down on them; and changing from chlorides to sulphurets. In all of the claims upon which work enough has been done to reach the water—in this vicinity at a depth of from thirty to sixty feet—the rock assumes the steel gray appearance of the Virginia first class ores. On the wider ledges of the slate districts the rock seems to be of a different character on top. The most prominent districts are the Amador, Mount Hope, Yankee Blade, Reese River (Austin and vicinity) Washington, Union, San Antonio, Smoky Valley, Santa Fee, and Bunker Hill.

With the usual levity of a mining community the crowd rushes to the newest discovery. Union and San Antonio districts are the great attraction at present, to be superceded in their turn by another discovery in a few weeks. The only unsolved problem about the Union is as to the amount of quartz; what there is is rich beyond dispute. Four or five towns have already sprung up there. The rock from San Antonio, which is one hundred and ten miles south-east of this place, assays from nine hundred dollars a ton up to thousands, and the ledges are very wide. A wagon load of the top rock from a number of ledges in that district was brought up yesterday, and certainly it looks well, if there is any thing in that. It will be tried by mill process at once, and the question settled. There is said to be a great scarcity of wood and water in that section.

Washington district, thirty-five miles south of this, has had its share of turmoil, scrambling for feet, jumping town lots and fighting for wood ranches; and the crowd which has swept over it, for greener fields in the distance, has left it in good hands. I am not writing this to influence any one's judgment in regard to the value of any mine, or the probable future of any locality; so I think it fair to tell you that I think more favorably of Washington than of any other district, and that I am largely interested in the mines there. San Pedro and Cottonwood creeks flow down cañons of the same names, at a distance of one mile from each other, and are respectably sized streams of pure mountain water and inhabited by speckled trout. The town of Washington is near the mouth of the first mentioned cañon, San Pedro, and the town of St. Augustine is at or near the mouth of Cottonwood cañon.

Washington has about sixty houses, in a situation beautiful adapted for a town. There is some rivalry between the two places, but Washington most probably will retain the advantage she possesses, as a fifteen-stamp mill is now in process of erection, the machinery being all on the ground. There is an abundance of water and plenty of desirable mill sites for a number of mills in either cañon. The ledges in this district are very wide, and well defined. They can be traced in some instances for miles. Notwithstanding new districts are being formed, locating and prospecting goes on briskly. The most prominent companies that I know of are the "New Hope Company" and the "Yuba Mining Company." They are both said to possess capital and certainly they have both done a good deal towards developing that district. The New Hope intend to erect a first class mill, as soon as the machinery can be brought over. They have tested the ledge from which the company takes its name in some arastras, and it pays $250 per ton from the very top, where it crops out of the ground. The Yuba company will most probably erect a mill as soon as they have thoroughly tested the rock from their various ledges. This district is better supplied with wood than any other that I know of. The favorite ledges in this section are the New Hope, Sacramento, St. Louis, Mattie Ann, Dora, Geneva, Santa Rosa, Live Oak and Don Quixote. The San Domingo is thought to be a very good ledge; a Spanish company own it and are blasting and working it six feet above the top of the ground, where the croppings stand out like the Chinese wall. The rock looks well and they say that it pays.

If I find another leisure hour I will give you my views of some of the other districts. ***

The Gold Hill Mines—Washoe.

The mines of Gold Hill, according to the *News*, published at that place, are divided into small claims and are therefore not able to make so imposing an appearance as some other mines in the Washoe region, where all the production comes together into a few hands in one "pile," before it is divided up into dividends among claim owners. The old claims of Gold Hill have paid dividends to their owners from the very surface. First, they were worked with a pan and rocker, and afterwards quartz was taken out with the windlass, then with aid of horse power, and now the work is done by the assistance of steam. The amount of silver and gold which has been extracted from these mines since they were first worked is enormous.

With a linear space of 680 feet the Gold Hill mines are divided into seven different claims. Within this space 219 workmen find employment, and six engines with an aggregate of 200-horse power. There is no other place in the Territory, adds the *News*, which has so many claims upon the same number of feet of ledge, or employs so many men, or has such facilities for working it. The mines of this district stand pre-eminent both in number and quality over those of any other mining district on this coast. There is no other 658 feet of ledge which gives employment to 219 workmen, or has machinery of 200-horse power for hoisting purposes alone. These facts tell their own story. Where so much physical and mechanical power is combined for the one purpose of bringing out ores as rich as those of the Gold Hill mines, the yield must be enormous, as in fact it is. The people may well feel proud of such sources of wealth as these—and our town, sprung up in so short a time on the proceeds of their wealth, will never fail from a decrease of their production. Four hundred and twenty feet is the deepest point yet obtained in any of our mines—and that only by a shaft—the rich ledges have hardly been disturbed at a greater depth than half that distance. The production of our mines may go on unabated for years before they will be worked to the depth which the Mexicans have gone in theirs, and almost for centuries before they will be worked as deep as the silver mines of Sweden.

For Silver Mountain.—Dr. J. T. Harrison and George Pomeroy, of San José, are about opening a drug store and assay office at Silver Mountain, Amador county. From personal acquaintance, we recommend them to the citizens of that new and flourishing mining section as young men competent and worthy of patronage.

Adjutant-General's Report.—We are indebted to Gen. Wm. C. Kibbe for a copy of his annual report.

KEITH'S DESULPHURIZING PROCESS.

The Colorado papers have been quite silent about this "process" for some months past. Our last intelligence with regard to it from that quarter, it will be recollected, pronounced it a success. Since that time we have seen no further reports, until the following, which we clip from the Colorado *Journal*, of a recent date. It at least shows "progress:"—

Keith is on the right track, and is bound to tow Colorado gold-mining out into smooth water. The impression prevails largely that his process cannot be used in connection with stamps. It is a mistaken impression. All that is necessary is to save the tailings, which is usually done anyhow, run them through the furnace, which is cheaply constructed, and amalgamate either in the Freyburg Pan or as future experiments shall indicate. No increase of power will be necessary; no throwing aside of costly machinery already in use. But a small outlay will be required to introduce the desulphurizing process, now proven beyond a doubt to be a success, universally. The mill is now running on ore from the Mammoth, with satisfactory results. But the machinery now in is so inadequate to the power that an intelligible judgment of the process cannot be made up from present operations. Let them get in three more heaters, and twenty-four instead of two pans, and then we shall have results from which an estimate can be made that will satisfy all. Mr. Keith is now preparing the dry amalgamator, of which we have spoken before, for use. Startling developments are expected from its introduction. Other parties are busily experimenting on this desulphurizing business, which, when perfected, is to save thousands of dollars heretofore remaining in the tailings or carried off by the water.

It would appear from the above that the desulphurizing process is a success, and we infer that the "failure," if any exists, is found in the process for reducing the quartz, which must be accomplished without water, and to a degree of fineness fully equal to the pulp that comes from our most thorough pan process. The reduction machinery employed by Mr. Keith is a kind of beater, which was fully described in the Mining and Scientific Press of July 6, 1863. These machines are known as "Howell's Crushers," and are manufactured at the Golden State Foundry, in this city.

One great trouble heretofore encountered in running these machines arises from their liability to burst when running at a high speed. One of these machines has just been constructed at the above named foundry, under the immediate direction of Professor Ryerson, which is a great improvement on those heretofore employed. The danger of accident from breakage is almost entirely surmounted by giving additional strength where it is needed, and by a more perfect construction of all its parts, whereby it is made to run much more smoothly than any now in use, and may be driven at a much higher rate of speed. The Professor is quite sanguine that he has brought out a machine which is just the thing for crushing quartz everywhere. The machine will soon be put to work in a mill in the southern portion of the State, and we shall probably be able to report with regard to its success at an early day.

Boiled Food for Animals.—Prof. Mapes, of New York, recently read a paper before the Farmers' Club of New York, in which he showed, by well attested experiments, that the difference between feeding raw and boiled food to hogs was as 4¼ to 13; that is, pork fed on raw food costs but 4¼ cents, exclusive of the cost of cooking. We are not informed of the character of the food employed. These experiments were made by Mr. Mason, of Camden, N. J. The Professor also gave the name of Mr. Henry Ellsworth, who had also made extensive experiments, which resulted in the proof that 13 pounds of boiled corn would make as much pork as 30 pounds of raw corn.

Another Dividend-Paying Company.—The Crescent Quartz Mining Company, of Indian Valley, Plumas county, Cal., has declared a divided of $50 per share, payable in this city. The stock of this company has never been offered in the San Francisco stock market to any extent at all.

[Written for the Mining and Scientific Press.]

MINING GOSSIP.

EDITED BY FRANK WARDDELL.

ANOTHER STOCK SUIT.—Mr. Charles Cavanaugh commenced suit in the 12th District Court, on the 31st ult., against the Trustees of the Potosi Mining Company, to compel them to issue to him fifty shares of the capital stock of said company. In his complaint he avers that the original owners of the mine employed George Draper and himself to prospect the claim and make a report as to its true value; in consideration of which they were to receive jointly, in payment, one hundred and seventy-five feet in the ledge. The work was accordingly performed, the report made, and a deed for eighty-seven and a half feet given to said Cavanaugh. After which the company was incorporated, the capital stock was fixed at four hundred thousand dollars, and divided into shares of five hundred dollars each. As the other parties conveyed their interests to the company, Mr. Cavanaugh of course did the same as the rest, agreeing to take the amount in shares, which would amount to one hundred and seventy-five; instead of which he received only one hundred and twenty-five. He has made many demands for the stock from the trustees for the balance of fifty shares, but they refuse to give it to him. He therefore asks the Court to issue a writ of mandamus compelling them to issue the stock to him.

THE NEWTON COPPER MINE.—The proprietors of this mine have spent the greater portion of the past winter in re-timbering their works and in putting up machinery. The mine never looked better than at the present time. The lode has now been followed down from the surface a distance of 170 feet; from which point a drift has been run south 250 feet. Throughout the entire extent of both the shaft and drift the mine presents a continuous, well defined lode, yielding ore of percentage sufficiently high to justify the shipment of the entire mass as it comes out. The proprietors, however, have thought it economy to sort the ore, and will do so hereafter, reserving the lower grades for future treatment and disposition. During the past year full $20,000 in value of ore from this mine has been sold and delivered to Mr. J. F. Greenman of this city; in addition to which a considerable amount has been shipped to Europe. The claim consists of 1800 feet, every foot of which is still retained in the hands of the original locators. The Company was incorporated a short time since, and they have the satisfaction of knowing that the Corporation is free from debt, with no prospect of its being incumbered in that way. Although the mine has been under active operation for eighteen months, the assessment book has never been used. The Company will resume operations again in about ten days, after which it is believed that shipments will continue uninterrupted.

HEAVY SUIT AND QUEER DOINGS.—A suit has been commenced in the Fourth District Court, by Mr. J. G. Shirts against Hall Mc Allister, the well known attorney-at-law of this city. The suit is commenced to recover the sum of twenty thousand dollars in gold coin. In reading the complaint we find that plaintiff alleges that Mr. L. Maynard placed in the defendants hands, in trust for plaintiff, twenty shares of the capital stock of the Potosi G. and S. M. Co., which in the month of September last, according to market rates, was worth fifteen thousand dollars; also he deposited a certified check on Donahoe, Ralston & Co. for five thousand dollars, and that now the defendant refuses to give them up to plaintiff; and has wrongly converted them. Rumor says that the suit has grown out of the controversy between the Chollar & Potosi mining companies, and when the proceedings are brought to light they will reveal many funny transactions.

Since the above was in type we have heard that the defendant has in his possession, and ready to deliver, the mining stock and certified check in the same form in which they were received.

CROCKET, ESMERALDA.—This stock does not seem to improve; although we hear of one large sale to an outside purchaser, who intends holding.

SAVAGE VS. NORTH POTOSI.—The important suit between these two companies will be called up for trial before Judge North, next Monday.

INDEPENDENT, G. H.—We learn that the application of this company for a restraining order against the Justice mine has been denied.

COPPER ORE.—We have had shown to us some splendid specimens of copper ore with traces in it of both gold and silver, they are from the Henry and Bernard mine, situated in Weaver District, Arizona.

WAGON ROAD.—A meeting will be held on the 6th of April, at Red Bluff, for the purpose of organizing a Wagon Road Company, to the Boise Mines. The project is a good one and we trust they will be successful.

NORTH AMERICAN.—This stock, toward the close of the week, has taken another of those semi-monthly flights now so common. It is again away up and the probabilities are that by the time of our next issue it will be away down. The excitement regarding this stock is fictitious, nothing to warrant it.

LADY BRYAN.—This much admired lady has been dancing some very curious steps in the several boards, for the past few days. It is quietly remarked among the "knowing ones" that the lowering of the stock was only a little dodge of their own to "knock" it so as to make the "30-day sellers" of the stock come out right, on their contracts.

SUIT DECIDED.—The injunction suit of the Potosi against the Chollar Mining Company, was decided on the 31st ult., in favor of the Potosi, which makes the injunction a perpetual one. Upon this news being received here, Chollar dropped from $375 to $300 per foot.

CRESCENT QUARTZ MINING CO.—This company which is located at Indian Valley, Plumas county, California, have had the good fortune to be able to declare the respectable dividend of $50 per share. This is what we consider something like a dividend to be declared, especially by an outside company.

BEST AND BELCHER.—The flow of water in the shaft of this mine is said to have diminished very much during the past few days, so much so that no difficulty is now experienced in keeping the mine free from water, without the aid of their pumps. There are only 224 feet in this company's ground and if they should make a lucky strike, the stock would go up in the market to a fabulous figure.

OWENS RIVER.—The emigration to this place continues to be as great as ever, they are coming in, according to last accounts, from every direction. New mines, and rich ones at that, are being discovered every day. Many companies are hard at work and are highly delighted with their prospects. What they now want is a plenty of good mills. The climate is a beautiful and healthy one to live in, and this is destined to be a great mining locality.

IDAHO.—For the benefit of those who always rush off in all wild excitements, without stopping to reflect, we clip the following from the Chicago *Tribune*, the same having been sent them from their own correspondent. The paragraph will illustrate the "*modus operandi*" by which our miners are so often deluded:—

"I have seen a reliable gentleman just from Idaho, and he says the story about that fifteen millions of dollars in gold awaiting transportation is all hosh; and adds there is not enough gold dug out in the whole Territory to pay the expenses of getting the emigrants home, and that all these big stories telegraphed from St. Paul and New York, just before Spring opens, are the fabrications of speculators, to get up a rush of deluded emigrants."

There are undoubtedly paying mines in Idaho; but nothing at all adequate to warrant the present excitement and rush in that direction.

BRITISH AND AMERICA COPPER MINES—THEIR RELATIVE PRODUCT.—During the year 1862, the Lake Superior mines sent to market three-fifths as much copper as was obtained from all the British mines; and it is confidently predicted that the yield of the first named mines, the present year, will exceed that of the English mines, during the same period. In Great Britain the copper mines have been worked for centuries, whereas less than a score of years have elapsed since the first ton of native copper was shipped from Lake Superior. In Great Britain the copper mines are giving out—are yielding a diminished product; at Lake Superior virgin veins and lodes are every year uncovered and developed, the yield being rich and unfailing, and the prospect being full of profit and promise.

The above results are most encouraging to the copper mines of California. Lake Superior, in less than a score of years, has increased her yield of copper to an extent equal to that which Great Britain has attained only after the lapse of many centuries. Neither is there any danger of overstocking the market, as we have already seen that although the yield of copper has been doubled within a few years, so great has been the increase in demand for its product that its price has been constantly enhancing. The demand will be fully equal to the increasing yield of both the Lake Superior and California produce.

NEW QUARTZ MILLS.—The Shasta *Courier* is informed that the Mammoth Quartz Mining Company are about receiving the machinery for their mill. Workmen are now engaged in getting out timber, and preparing a foundation for the mill, which will be ready when the machinery arrives. They expect to have their mill running by the first of July, at farthest. The machinery for the Spring creek custom mill will also be *en route* for its location by the fifth of the present month, and by the time it arrives everything will be ready to place it in position for work. This company are taking hold of their work with great energy, and will soon be crushing quartz from the many rich gold bearing leads in this vicinity.

From the same paper we learn that the Original Bully Hill Copper Company have commenced taking out copper ore from a well-defined lode at the bottom of their shaft in the upper tunnel, and will soon begin to ship to San Francisco. The Daniel Webster, on Buck Gulch, has abundance of rich silver bearing rock in sight, but work has been suspended for the present, waiting for the heavy rains to pass by, as the company contemplate sinking a shaft directly in the bed of the gulch. The Original Twenty-Six Company have temporarily suspended work. They are running a tunnel for the purpose of cutting a series of veins at right angles, and at a great depth from the surface. Work will be resumed in a few days. The *Courier* adds that evidences of there being a large population in the region of these mines in a few months are beyond all question, and that even now Copper City is one of the busiest places in the county, and reminds one of early times in the mines. The Original Williams and Kellenger Company have not yet found a well defined ledge, but have a very large mass of rich ore, which looks to be inexhaustible. Shipments of ore from this mine have been temporarily suspended for the want of proper sacks to secure the ore from waste. The Original Minnesota Company have their lower tunnel in 80 feet, and will strike a ledge in about 90 feet more. Specimens from their upper tunnel assay very rich in silver. They have a well defined lode, easily traced by the croppings, and this mine is evidently one of the best in the district.

THE editor of the Nevada *Gazette* has seen, at Birdseye & Co.'s banking house, a bag containing $4,000 in gold—the result of the crushing, at Ott's mill, of 120 tons of rock from the Federal Loan Company's claim on Deer creek, about three miles east of Nevada. This is a good paying yield. The Gallagher, Decker, Deadwood and Lecompton quartz claims, all in the vicinity of the Federal Loan, are paying well.

NEW MILL.—The Stockton *Independent* says that a large steam engine, boiler, and the machinery for a ten-stamp quartz mill has just been forwarded by Smith Whiting, for Messrs. Staples & Wentworth, of Sonora. The mill will be erected on a paying quartz vein about twelve miles above Sonora, on the line of the Mono road.

Copper Discovered in an Iron Mine near Marquette.

Late observations have disclosed the existence of a vein of rich copper ore at the Lake Superior mine, which bids fair to add largely to the profits of mining. The vein is enclosed in walls of iron ore, and extends across the formation, running in a northerly and southerly course. The appearance of the vein matter is not very different from ordinary hematite and decomposed slaty iron ore, being evidently colored by the iron with which it is in contact. It consists principally of a black oxide, but contains some traces of sulphuret of copper, and is somewhat mingled with iron ore. It is quite soft, and from some imperfect tests made, it is thought to contain from 5 to 50 per cent. of copper. The vein has been traced about 400 feet on the surface, and the iron mining operations have opened it to a depth of 40 feet. The general width is about four inches, but in places are found pockets three feet or more in thickness. This vein matter has been heretofore taken out together with the iron ore with which it is enclosed, and shipped with it as iron ore. Not long since, Mr. Palmer, a furnace proprietor in Buffalo, called the attention of Mr. Ely, agent of the mine, to the fact that, on removing the hearth of his furnace, in which he had been smelting ore from the Lake Superior mine, he had discovered a mass of pure copper, of over a ton in weight, which had found its way through the crevices in the hearth. As different analyses of the rock ore have shown no copper, Mr. Ely came to the conclusion that this copper must be in some particular part of the mine, and not generally diffused through it. He, therefore, went to the mine recently for the purpose of ascertaining, if possible, where it was. After a little search, his attention was attracted to this vein, and a close inspection convinced him that it contained the copper. Subsequent tests have proved the correctness of his conclusion. Had this been supposed to be a copper region, the vein would undoubtedly have been discovered long ago; but being in an iron mine, within walls of iron ore, and having the general appearance of decomposed iron ore, nothing was thought of it.

The value of this discovery cannot, at present, be determined. So long as it is found in iron ore, it can be mined without extra expense. In quarrying out the iron, all they have to do is to gather up the copper ore by itself, and realize an average of $75 to $100 per ton, as such, instead of the price of iron ore. But the work so far is, comparatively speaking, only surface work. It is quite natural to conclude that it may widen, or that the pockets may be more frequent as it goes down, and that it will be profitable to work even independent of the iron. And why may it not reasonably be supposed that other veins of equal or greater richness exist, which a little well directed search will disclose. Similar veins have been discovered in the Silver Lead district, crossing the formation like this, and there is no apparent reason why they should not be found in greater numbers in the iron range.—*Lake Superior News and Journal.*

Blue Mountain.—The Heckindorn Company, according to the Calaveras *Chronicle*, have just put their machinery in motion, and practically tested the quality of their argentiferous rock. Besides doing material good to the agricultural districts, the rains gave this company an opportunity to crush some nine tons of ore, which yielded gold and silver to the amount of $130 per ton, and the most doubtful Thomas was fully convinced that Blue Mountain will prove a success. The vein is four feet in width at a depth of sixteen feet from the surface when the rock was taken out. The mill is a small one, having only four stamps and one of Hepburn's pans. The late rains will give the company plenty of water for the next few months. The mill will be run as long as the supply lasts. The Blue Mountain claim joins the Heckindora within six feet from the mouth of the tunnel from whence the ore crushed was taken. The *Chronicle* expects to hear that several steam mills will be put up immediately in the neighborhood. The Gold Quarter, Celina, Sailor, Mountain Crest, and other leads prospect finely. Blue Mountain will be a lively place this summer.

The Recent Quicksilver Discovery in San Luis Obispo county, is undoubtedly one of much value. It is being developed by experienced workmen from the New Almaden mine. The rock already taken out is very rich. The mine is located on the summit of the Coast Range divide, about 15 miles from San Simon Bay, to which a good road can be made at small expense. The ore is pronounced superior to that obtained at the New Almaden mine.

The Eureka Company, at North San Juan, Nevada county, recently cleaned up $12,000 from less than two weeks' run—mostly from top rock.

Ancient Philosophers.—Although nothing like the true system of natural philosophy was known to the ancients, on account of their utter inattention to experiment, there are nevertheless to be found in their writings many brilliant conceptions, several fortunate conjectures, and gleams of the light which was afterwards to be so generally diffused.

Anaxagoras, for example, who thought that the sun was a red hot iron, as large as the Peloponesus, taught at the same time the just doctrine that the moon shines by light borrowed from the sun; and was led to that opinion not only from the phases of the moon, but from its light being weak and unaccompanied by heat.

Democritus, who maintained that the sun and moon are bodies no larger than they appear to us to be, supposed correctly, though very inconsistently, that the spots on the face of the moon arise from the inequalities of the surface, and from the shadows of the more elevated parts projected on the plains. Every one knows how conformable this is to the discoveries since made by the telescope.

The same philosopher was still more fortunate in another way. He taught that the milky way is the light of a great number of small stars very close to one another; a magnificent conception which the latest improvements of the telescope have fully verified.

Plutarch, whose ideas were encumbered with fewer absurdities than most of the ancient philosophers, considers the velocity of the moon's motion as the cause which prevents that body from falling to the earth, just as the motion of a stone in a sling prevents it from falling to the ground—a comparison which clearly implied the notion of centrifugal force.

All such conjectures, however, were the mere speculators of ingenious minds, wandering through the regions of possibility, guided by no evidence, and having no principle which could give stability to their opinions. The foundations which they might have laid for a just and complete system, were laid without effect; the era of experiment and observation, without which nothing real in physics is to be acquired, was yet many centuries distant.

How Artifical Pearls are Formed.—Sir Joseph Banks was the first naturalist who described the manner in which pearls are formed by certain testaceous animals in their shells; but his narrative was generally questioned. It was, however, fully corroborated in 1853, when the *Hermes* steamer, being at Ningpo, the great Chinese market for these pearls, the sailors obtained some live muscles, in which, on being opened, several pearls were found in the course of formation. It appears that the Chinese introduce pieces of wood or baked earth into the live muscle, which, being irritated, covers the substance with a pearly deposit. Little metal figures, generally of Buddha, are frequently introduced, and when thus coated with pearl are valued highly as charms.

Artificial pearls have been made from the scales of the bleak, and other fish, since the reign of Henry IV. of France; the beads are of glass, and are coated inside with the pearl essence; and the taking of the fish and the manufacture of the pearl and beads is said to employ one hundred thousand persons in France and Switzerland.

Pearls, from their consisting of carbonate of lime, are, of course, very soluble in acids. Hence may have originated the account of Cleopatra dissolving a pearl in vinegar, and drinking it to Mark Anthony's health at supper; which is now regarded as an historical fiction, to show the inventive talents of the voluptuous Queen in her allurements for Anthony, in whom she found a companion to her taste. It is, however, pretty certain that Cleopatra possessed a pearl, or pearls of great value.

Comparative Durability of Ancient and Modern Structures.—Mr. Ure observes, that "such was the care of the ancients to provide strong and durable materials for their public edifices, that but for the desolating hands of modern barbarians, in peace and in war, most of the temples and other public monuments of Greece and Rome would have remained perfect at the present day, uninjured by the elements during 2,000 years. The contrast in this respect of the works of modern architects, especially in Great Britain [much more true of the United States], is very humiliating to those who boast so loudly of social advancement; for there is scarcely a public building of recent date which will be in existence a thousand years hence." Many splendid structures are monuments (not endless) of folly in this respect. He observes also that the stone intended for a durable edifice ought to be tested as to its durability by immersion in a saturated solution of sulphate of soda, and exposure to the air for some days: the crystallization within the stone will cause the same disintegration that would result in time from frost.

Iron and Steel.—Steel is iron passed through a process called cementation, the object of which is to impregnate it with carbon. Carbon exists more abundantly in charcoal than any other fusible substance, and the smoke that goes up from a charcoal forge is carbon in a fluid state. Now, if you can manage to confine that smoke, and put a piece of iron into it for several days, and heat the iron at the same time, it will become steel. Heating the iron opens its pores, so that the smoke or carbon can enter into it.

The furnace for this purpose is a conical building of brick, in the middle of which are two troughs of brick or stone, which hold about four tons of iron. At the bottom is a large grate for the fire. A layer of charcoal is put at the bottom of the troughs, then a layer of bar iron, and so on alternately, until the troughs are full. They are then covered over with clay, to keep out the air, which, if admitted, would prevent the cementation. Fire is then communicated to the wood and coal with which the furnace is filled, and continued until the conversion of iron into steel is completed, which generally happens in about eight or ten days. This is known by the blisters on the bars, which the workmen occasionally draw out in order to determine. When the conversion is completed the fire is then let go out, and the bars remain in the furnace about eight days more to cool.

The bars of steel are then taken out, and either sold as blistered steel or drawn to a convenient size, when it is called tilted steel. German steel is made out of this blistered steel, by breaking the bars into short pieces and welding them together, drawing them down to a proper size for use.

Assaying Made Easy—Mineralogists at Fault.—The following is a fair specimen of how much falsity may be put into the mouth of an ignorant man who does not exercise sufficient caution on Montgomery street:—

Silicate of Copper.—Mr. Richard Ryland, the discoverer and Superintendent of the Planet Mine, a fine copper and silver lead, located on the banks of Williams' Fork, but twelve miles from its junction with the Colorado, and seventy-five miles above La Paz, exhibited to us yesterday a fine sample of pure silicate of copper, taken from a vein of that mineral several inches in width, in the Planet mine. This article resembles in appearance, to some extent, the blue vitriol of commerce, and is seventy per cent. pure copper. A knife-blade dipped in water and moved through the powder is instantly coated with pure copper, as if galvanized with that metal. This mineral is looked upon as an almost certain evidence of the value and large extent of an argentiferous copper mine. It has been recently found in some of the other mines in Arizona, and in some of the South American mines is found in sufficient quantities to pay largely in itself for working the mine. Mr. Ryland returns on the next steamer, to commence getting out ore for shipment.—*Alta.*

Here is an ore so readily reduced that water will dissolve copper from it! Begone, ye chemists, with your acids! And what is more, this water assay extracts 20 per cent. more metal from the silicate of copper than has been found in all the specimens examined by such men as Berthier, Scheerer and others, who have had access to silicates from all parts of the world.

The Vassar Female College, now building at Poughkeepsie, New York, will probably be one of the most extensive and complete institutions for female education extant. The building is of brick, with stone trimmings, three stories high, 500 feet in front including wings, 165 feet deep, accommodating 250 pupils, besides chapel, library, art gallery, recitation rooms. President's and professors' houses and teacher's rooms will cost $200,000, and will be completed before August. A library of 2,500 volumes is secured already, and a cabinet of minerals worth $8,000. A great equatorial telescope, aperture 12⅜ inches, length 17 feet, will be mounted and adjusted in August. The College will be open September 1st. One hundred and fifty applications were registered up to January 4th. This institution has been founded upon the munificent donation of $400,000, which was made by Mr. Matthew Vassar.

New Daily in Esmeralda.—We have received several numbers of the *Esmeralda Daily Union*, a new evening paper which has grown out of the Weekly *Star*. We trust it may increase and prosper.

Mechanical Department.

[Written for the Mining and Scientific Press.]

Economy in Generating Steam.

Messrs. Editors:—My reason for not yielding faith to a transparent humbug, seems to have exercised quite a magnetic attraction upon the irony of "An Enquirer." Perhaps he considers it a perfect economy of argument to make such a superficial mental display.

Did I think "An Enquirer" really desired answers to his queries, I would endeavor to gratify him at length. But what have those queries to do with the idea of an economy of fuel by increasing the surface of water exposure? Experimentally it has been ably demonstrated that no alteration in form of surface, by corrugation for instance, of the same thickness of plates and capacity in boilers, made any difference in the condition of heat from the same fire. Steel is not a better conductor than iron, but the allowance of a *diminished* quantity of material for the same pressure of steam gives it a decided advantage in the rapid conduction of heat to the water. A gain of nearly thirty per cent. in the steam generated by the same amount of fuel is something extraordinary, and either shows a greater power of combustion, when a fire is in contact with stubborn but rapidly transmitting particles of matter, or else very imperfect saving in the furnace beneath the iron boiler. Any individual, hopeful of reconciling the said experimental result with any fixed law of combustion or heat, will find a broad field for remuneratively adapting the same principle to many inventions and uses. Yet steel boilers are not of very recent construction, neither are the possible methods of economy suggested by "An Enquirer" unapplied in practice. I am not disposed to deny that a great saving can be accomplished through the proper management of fuel and steam aside from the boilers. Full forty per cent. of fuel escapes combustion as particles of carbon or gases. And not one sixth the theoretical power of the steam generated is exhibited in the ultimate force of the engine. The economizing of the heat of waste steam is a matter of common use. The losses, as well as the amount of air required in combustion, has been the subject of frequent experiments. There would seem to be a certain loss inseparable from all high concentrations of power: the most guarded force of an electro-magnetic machine is far less than the sum of power that the same electrical current of the battery will give under a more extended or free condition of action, as has been experimentally proved.

Sunshine certainly can be used by the concentration of the rays in the same manner that an immense number of heat impulses from fuel are gathered within an expansive volume of steam for a single disruptive effort. Otherwise its very omnipresence would counteract its direct application to sustained or impulsive throes of that power diurually manifested in the expansion of matter. Even moonlight would seem to possess a prodigious power, for, according to "An Enquirer's" averment, it gave him an idea. E. A. M.

Sacramento, March 22, 1864.

In hastily answering "An Enquirer's" communication, which I did immediately after perusing it, I neglected to notice his first proposition, that the excess of air entering a furnace and passing off in a rarified condition, carries away as much caloric as is contained in an equal weight of water converted into steam. Aside from the false basis of assumption, the statement appeared to be a startling one because the conclusions arrived at by certain scientific experimenters in England, acknowledge a loss of only three per cent. of heat through the chimney of a furnace. The amount seems rather small, but I presume that the experiments were conducted with a clear idea of the quantity consumed or rendered latent by the effort of expansion. The loss of combustible vapors is ascribed to their depressed temperature before they have fully traversed the flues, where the same exist in boilers. If the vapors are cooled much below their original heat assuredly their containing air will be similarly affected. When "An Enquirer" departed so far out of his way as to make a most pitiful exposure of his calibre it was to be expected that he was naturally capable of asserting an error for a fact. This was well shown in his assumption that the same weights of water and air require equal amounts of heat to raise them to the same temperature. The specific heat of water being 0.267 and that of air 1,000 the latter will only need one fourth the quantity of caloric to elevate it to an equal temperature with the former. For this reason the excess of air cannot carry off more than one fourth the amount of heat communicated, to the water in the boiler, even allowing no deduction for the heat absorbed by flues or distant portions of a boiler. E. A. M.

Sacramento, March 29, 1864.

Chlorine decolorises precious stones, but the diamond, ruby and sapphire resist its influences.

An Expensive Patent Suit.—A case involving a patent for making hat bodies was recently argued in the United States Supreme Court. The costs, thus far, have reached the sum of three hundred thousand dollars.

Eureka Metallurgical Works.—Farrand, the inventor of the Farraud Amalgamator, has removed his machine to Commercial street, between Front and Davis, where he is erecting an ore reduction mill, which will be known as the Eureka Metallurgical Works.

How to Drive Nails.—It is often difficult to drive common cut nails into hard timber boards, &c. They will never "fly out," however, if first rubbed with soap—common bar or any hard soap will answer. Screws treated in the same manner may also be driven with much greater ease. Soap is much better than oil, and at the same time more convenient.

A New Process of Amalgamation.—Henry W. Adams, of New York City, and W. S. Worthington of Newton, New York, have obtained a patent for a new process of amalgamation by which finely pulverized gold or silver ores are discharged, as it were in a shower, into an atmosphere of hot vapor of quicksilver. This contact or commingling of the pulverized ore and mercurial vapor is accomplished in a close chamber or passage way, in which it is claimed the two substances mingle together and impenetrate each other in such a manner as to form a more perfect amalgamation than has heretofore been obtained. The novelty of this process consists in the peculiar manner in which the two substances are brought into contact.

A Very Useful Apparatus is now on exhibition at the Patent Office, Washington, invented by Mr. F. N. Gisborne, the originator of the Atlantic cable, for communicating the signals required in working the engines of steamships, or in steering vessels of all sorts, by means of telegraphic wires. The communication is instantaneous, and the apparatus is so arranged as to make it trustworthy and certain. The officer on deck has only to move an index upon a dial under his hand to cause a corresponding movement to appear directly before the eyes of the pilot or engineer, whose attention is ensured by the ringing of a bell, as a part of the telegraphic movement. Meanwhile the action of the pilot or engineer, in response to the order is telegraphed back to the officer by an automatic motion, so that all possibilty of mistake is avoided. Mr. Gisborne's apparatus has been examined and approved by some of the highest nautical authorities in foreign countries and in our own, and has been actually used in several vessels. He has patents in the principal maratime countries.

Applying a Jet of Superheaten Steam to Reverberatory Furnaces.—A patent has been granted to M. Thierry, of Paris, for certain improvements in the construction of furnaces which render the combustion of the fuel more complete, and prevent the emission of smoke. This is effected by blowing in from the front of the fire-place against the bridge of the furnace one or more jets of superheated dried steam, freed of its hydrogen by intense heat, which feeds the fire with a gaseous compound of carbonic acid and oxygen, and thus so intensifies the combustion as to avoid the formation of smoke. Atmospheric air may also sometimes be blown in combination with the steam, which is best effected by placing an open pipe at the side of the steam jet, by which the air is drawn in, in combination with the steam. The superheated steam may be prepared either by means of a worm placed in the fire-place of the furnace, or by a distinct apparatus, to which it is conveyed by a pipe, and from which superheated apparatus it is delivered to the blowing pipe, which are all provided with the necessary cocks and exhaust tubes. The pipes can be made of any suitable substance; but when of wrought or cast-iron, they must be protected against the action of the fire by a coating of platinum, fire-clay, porcelain, or other highly refractory material. When applied to reverberatory or puddling furnaces, a combined blast of air and steam is employed in the following manner:—A large pipe of fire-clay, iron, or other suitable material is lodged in the masonry of the furnace, the outer end of which receives the blow-pipe from the superheating apparatus, together with another open pipe, capable, however, of being closed at its outer end. This latter pipe, when open, admits of the atmospheric air being drawn into the furnace with the draft occasioned by the jet of steam.

Eames' Water-Engine.—An engine for raising water *by* water, patented in 1862, has just been commended to public attention. It is simpler and more effective than the Ram, works by means of a piston not unlike that of a steam-engine, repels corrosion by its own action, and seems most unlikely to get out of order. Whoever desires to use a constant supply of water on a higher plane than that from which it is taken will do well to examine this engine. It is manufactured by Moses Eames & Co., Watertown, New York.

If the patentee of the above machine has a principle really valuable in practice, he will find it much to his interest to make it known in California, where such a machine would probably be in greater demand than in any other portion of the world.

Capital Expended on British Railways.—The capital expended in Great Britain, on railways to the present time has been upwards of $1,925,000,000. This amount has been devoted to the construction of 11,500 miles of railways in the British Islands, which are now open for traffic. The works executed in connection with these undertakings have been of extraordinary magnitude. Navigable rivers and even arms of the sea, have been crossed over; hills have been pierced by tunnels, and viaducts, embankments and cuttings made in all directions. All this has been accomplished within the life-time of a single generation of men, who have not only executed the work, but provided the means out of their private resources, without any assistance whatever from the funds of the State. In a word, the railway system of England has been the spontaneous out-growth of the native industry, energy, and enterprise of its people.

Appreciative.—The following notices from practical, active publishers, located in two of the most important mining districts in Nevada Territory, are highly appreciative:

Mining and Scientific Press.—This is one of our most valuable exchanges. It comes to us filled with the most valuable articles, original and selected, upon the subject of mining, and we scissorize it to an awful extent. Every person engaged in mining to any extent, should be a subscriber to the Press.—*Gold Hill News.*

Mining and Scientific Press.—Having missed a few numbers of this excellent paper, we feared it had ceased to exchange; but as it has again resumed its regularity, we are a little easier on the subject. The Mining Press is an almost indispensable companion to the miner and mill man, and when in our peregrinations we find it in the cabin of the one or the office of the other, we look for, and invariably find, a superior intelligence and more satisfactory working than where it is unknown, and its precepts ignored. We would dislike to be deprived of it, either as editors, miners, millers, or mechanics.—*Reese River Reveille.*

We exceedingly regret the apparent loose manner in which Uncle Sam has hitherto conducted his postal arrangements in the Territory. Our paper is mailed as regularly as the sun rises to all our subscribers and exchanges.

Patent Department.

STILL ANOTHER NEW AMALGAMATOR.—*A California Invention.*—Mr. M. Disney, of this city, has invented a new amalgamator, which may be described as follows:—The outside of the amalgamator presents a long cylindrical vessel, of any convenient size, through which passes a shaft, with arms, upon the extremities of which are affixed moveable shoes with convex faces, made to conform in shape to the inner surface of the cylinder. Upon the lower portion of the inner surface of the cylinder are affixed moveable dies. Both the shoes and dies are grooved transversely, to give the same effect upon the pulp as is obtained by the transverse grooves of the ordinary pans. The grinding surface is confined to the lower portion of the cylinder; the shaft, with every revolution, passing the faces of its mullers over those of the dies. Of course, by such a motion the pulp will be kept in a constant state of agitation, and every part of it will be brought in turn, between the grinding surfaces. The mullers are so arranged as to be held to their places by springs, and when the pulp is sufficiently ground, they can be completely raised from the dies by set screws, made to act simply as stirrers for amalgamating purposes. Mr. Disney has made application for letters patent through the MINING AND SCIENTIFIC PRESS PATENT AGENCY.

COATING THE SURFACE OF IRON WITH ALUMINIUM.—A patent has been granted in England, to Mr Wm. Clark, for a method of coating the surface of iron with metalic aluminium, either wholly or in part, which is effected in the following manner:—First, the surface of the iron to be coated is made perfectly clean, after which is taken 60 lbs. of any porcelain frit, properly mixed together, and sufficient pure water added to bring it to the consistency of ordinary cream, after which it is put into a common porcelain or frit mill and ground until a complete incorporation is produced. Next not less than 10 nor more than 15 parts by weight of this mixture is taken; and to it is added not less than 1 nor more than 10 parts of any of the so-called fat alum and potash clays, after having first calcined and pulverised the clay, and added sufficient water to make it of the same consistency as the mixture of frit feldspar and white lead. Next sufficient water is added to the whole compound to reduce it to such a consistency as will just permit it to adhere to and cover the whole surface of the iron either when the latter is dipped into the compound or when the compound is poured on it. When the iron has in this manner received a thin covering, and been thoroughly dried, it is placed in a reverberatory furnace or oven and baked until the surface presents a glazed appearance. When it is removed from the furnace the iron will be found to be covered with a hard vitreous coating adhesive, elastic, and tough enough to resist any bending of the iron at less than a right angle, and also indestructible by the ordinary acids or alkalies. This elasiticity and adhesiveness is presumed to be due to the fact that the compound in the baking process yields metallic aluminium, which lies between the iron and the outer glaze, firmly adhering to both. A frit may be formed of the following materials and proportions by weight:—Feldspar, 50 parts; Flint or silex, 30 parts; China clay or kaolin, 10 parts; sal soda, 25 parts; Spanish white, 20 parts; boracic acid, 10 parts. To coat iron with aluminium alone, take from 2 to 3 parts by weight of any of the fat alum or potash clays prepared by calcination and pulverization as before described, and add from 1 to 2 parts of boracic acid. When the whole is reduced to a consistency of cream, dip the iron into the paste, and dry it until all the moisture is expelled; then bake until the surface appears glossy and the paste is reduced (as it is termed) by the heat, when the iron is removed from the furnace, care being taken not to allow anything to come in contact with the paste in its soft state. As the iron shrinks by cooling, the slag will throw itself off by decrepitation, leaving the iron covered with metallic aluminium. Then, if for use under salt water, coat the surface with common coal oil or kerosene, which, besides increasing the resistance to corrosion, also repels the attacks of animalcules and molluscs, from its offensive odor.

BULLION FOR THE WEEK.—The amount of bullion shipped by Wells, Fargo & Co., for the week ending March 26, was 6,580, worth $181,040.99.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by confessing the case. For this precaution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail.—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years...	15
On every application for a design, for fourteen years...	30
On every caveat...	10
On every application for a patent...	15
On issuing each original patent...	20
On filing a disclaimer...	10
On every application for a re-issue...	30
On every additional patent granted on a re-issue...	30
On every application for an extension...	50
On the grant of every extension...	50
On appeal to the Commissioner from Examiners-in-chief...	20
On every appeal to the Judges of Circuit Court, D. C...	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Will be Discontinued.—After this date subscriptions not paid for in advance will be discontinued. As soon as possible bills will be presented for all arrearages. Parties who receive a paper from the office of delivery cannot evade the LAW requiring payment for the same. We shall in future keep no continued accounts with subscribers, and the subscriptions of ALL friends and patrons will be treated alike.

San Francisco:
Saturday Morning, April 2, 1864.

THE COLORADO MINES.

By the steamer Senator, which arrived at this port on Monday last, we have the Los Angeles *News* to the 25th, containing important and interesting intelligence from the Colorado mines. We are also indebted to MR. FRANK S. ALLING, who came up on the Senator, for much valuable information with regard to the mines of El Dorado Cañon, a well-known locality on the Colorado river. It appears that the miners all along the Colorado have learned of the movements in this city to secure a full and cheap navigation on that river, and have taken new courage thereat. As a consequence, mining operations all through that section are rapidly improving, and the miners are in high glee, pushing on the work of developing their claims.

Mr. Alling has submitted to our inspection a large number of specimens of silver sulphurets, which are fully equal, to all appearances, to the best we have ever met with from Washoe. Among the lot of specimens exhibited was a very fine one from Mr. Lewis, the Superintendent of the Techattecup mine, which is to be forwarded to Washington. Specimens were also exhibited from the Queen City, in the same district, which could scarcely be distinguished from the former. Mr. Alling also showed us specimens from the Brandywine, Lady Heart, Buckeye and Great Republic; assaying respectively $85, $180, $70 and $30, from the top rock. The assays were made, by a working process, by Mr. Varney of this city. Arrangements will soon be completed for a vigorous prosecution of work upon these mines.

The Techattecup Company have struck their lode in a tunnel 256 feet long, and at a depth of 130 feet from the surface. The lode is from seven to nine feet thick. They have a large pile of very rich ore at the mouth of their tunnel. The Queen City ran their tunnel 100 feet when they struck their lode, and went down with an incline fifty feet. They have now about 100 tons of ore out, and ready for crushing. Arrangements are being made to put up a first-class mill, with the necessary machinery for working silver ores, near the mouth of the Colorado.

The only mill now in this district is the Colorado Mill, put up for custom work, in the cañon on the west bank of the Colorado river, where a town has been laid out; also two towns further up the cañon, where several substantial stone buildings have already been erected. Mill sites and town lots have been taken up along the river for four miles above and below the mouth of the cañon. This mill has recently been put in operation, and is the pioneer and still the only mill in Arizona. It has been crushing rock of late for the New Mexican Company, and has now commenced crushing for the Forest City Company, an extension of the New Mexican. The ores obtained from these two veins chiefly yield gold. Silver predominates in all the other mines, and in some almost exclusively.

The Independence Company are taking out very fine rock, and piling it up for working as soon as a mill can be made available. The Logan Company, in the Colorado lode, have an incline of 160 feet—a very fine piece of work. They are now coming upon ore of a very promising appearance. The Adelaide have struck fine indications at a depth of 53 feet. The Tornado are pushing ahead with their work night and day. The Waitt Consolidated Company had gone down 65 feet, and suspended work; but have now resumed again, in consequence of the improved condition of things growing out of the establishment of a reliable steam line on the river. There are now no idlers in the cañon, and whisky and cards are almost unknown.

DISCOVERY OF SALT.

Extensive discoveries of salt have been made during the past year, within five or eight miles of the bank of the river and about sixty miles north of the mines—the river being navigable between the two points for steamers of a light draught. This salt is found in veins, precisely similar to the veins of mineral, dipping at an angle of 45 degrees, and varying in width from eighteen inches to three feet. They are found throughout a large extent of country. The salt has been found, by tests in this city, to be remarkably free from impurities. This salt will eventually prove of great value in the working of the silver mines of this region. The discovery of coal has also been reported in the same vicinity.

THE LOWER COLORADO MINES.

Down the river from El Dorado Cañon, the first mining district yet opened is the San Francisco, in which is located the celebrated "Moss Lead," about 60 miles from El Dorado Cañon; then comes the Sacramento, Erataba, Wauba Yuma (a little off the river, to the East); next, the William's Fork, the La Paz, etc. The river flows throughout its entire length through a continuous mining region. The stretch of 60 miles between El Dorado Cañon and San Francisco District has not yet been opened up, but will doubtless prove equally as rich as any other section. The mines below San Francisco District are chiefly valuable for copper; above that point silver and gold predominate. The head-waters of this river, it will be recollected, are found in the celebrated Pike's Peak mining region.

THE COLORADO RIVER.

This river, which is now attracting a large share of attention, is destined at an early day to become one of the most important rivers on the Pacific coast. Its topography and general characteristics are certainly most remarkable. Taking its rise, as we have already said, in the Pike's Peak mining region, it constitutes simply a mountain stream until it reaches the vicinity of Black Cañon, about 80 miles above El Dorado Cañon. From this point to its mouth, a distance of a little over 600 miles, this stream is navigable for river steamers of light draught; and for 500 miles of this distance the entire country is rich in minerals—gold, silver and copper—down to its very banks, and to an unknown and unexplored distance into the interior. All kinds of miners' supplies will soon be delivered along this river, *via* the Gulf of California, for a price not greater than that now charged for the delivery of goods at Nevada City or Placerville. Freight has already been delivered at La Paz for three cents per pound.

A more rich or promising field for the investment of capital is seldom presented than here offered. The attention of capitalists is already being attracted thither. Eastern capitalists, especially, are looking with particular favor to these mines as among the most reliable and promising on the Pacific coast.

MR. MELVILLE ATTWOOD, Mining Engineer, has just returned from a visit to the Kern River Gold Mines, and reports favorably of them. He left the works of the "Big Blue" Lead and Sumner Companies, at six o'clock on Sunday morning last, and arrived in San Francisco at half past six on Wednesday evening. This, we believe, is the shortest time yet made over this route; but when the stages properly connect—as they soon will do—the trip may be made in three days, and will be the most direct route for those going to the Owen's River and State Range districts. On the Western Summit there was about six inches of snow. The late rains have considerably improved the appearance of the country; but through the north side of the hills, in the San Jose Valley, were beautifully green, the south side were still looking very dry and barren. Mr. Attwood confirms the reported discovery of rich placer mines about twenty-five miles northeast of Visalia, on Kings River. He met a large number of wagons on their way to Owen's River from Tulare county. A large emigration is constantly moving in that direction.

PRESENTATION.—Mr. Samuel North, late foreman of the machine shop of the Pacific Iron Works, was surprised at the close of work, on Tuesday evening last, by a sudden gathering of the men about his person. Their purpose was soon made known by one of the workmen, Mr. J. C. Harrington, stepping forward and in a neat and appropriate speech, in the name of his fellow workmen, presenting to their late foreman a fine Gold Lever Watch, as a testimonial of their appreciation and respect. Though taken entirely by surprise Mr. North responded in a very happy manner, and was as happily followed by Mr. Austin, one of the proprietors, who was also present. Mr. North leaves on the steamer to-day on a visit to the "Old folks at Home."

PRATER'S CONCENTRATOR.—This Concentrator, which is now in operation at Wheeler & Thayer's Reduction Works, North Beach, is still attracting considerable attention. It continues to perform its work in a most satisfactory manner. It is working on waste sands, from which it is taking out an average of 3½ lbs of quicksilver for each ton of sand worked, in addition to the amalgam and sulphurets which are saved. In our issue of last week we stated that this machine saved ten tons of quicksilver from four tons of sand. It should have read, as we wrote, ten pounds of quicksilver from five tons of sand.

DEATH OF A MECHANIC.—Mr. C. M. Holbrook, a master mechanic, died in this city on Tuesday last. Mr. Holbrook was among the pioneers to this State, and from the early infancy of San Francisco he has been intimately connected with its growth and prosperity. He designed and built Odd Fellow's Hall, and many of the most substantial mercantile piles in the lower part of the city were erected under his supervision. He was admitted, on all hands, to stand in the very front rank of our building mechanics. His funeral was largely attended.

NEW SUPERINTENDENT.—Mr. Charles Bonner has been elected Superintendent of the Gould and Curry mine. This is considered a most excellent appointment; Mr. Bonner, though a young man, has had large experience in mining matters. If we mistake not he was for some years in the field with Professor Logan, the noted Canadian Geologist. The reported appointment of Mr. Strong to the Presidency of this Company is premature.

MINING SHARE MARKET.

The Mining share Market, during the past week has been unusually dull and quiet. Very little business has been done except in a few leading, speculative stocks. The sales of the week show a large falling off, yet they foot up at $1,159,171.58.

Ophir closed last week at 1,680; opened on Monday at 1,670. On Thursday it dropped to 1,540, at the opening of the afternoon board, but closed at 1560; since which it has been quiet.

Gauld & Curry still remains quiet. We note two transactians, only—one foot at $4,550 on Mouday, and one at 4,500 on Thursday.

Savage met with a seller at $2,500 on Monday, but subsequently found buyers at from 2,600@2,615.

Central, No. 2 has been heard from at $900.

Uncle Sam sold yesterday at from $850@900, buyer 30 days.

Crown Point has found buyers at $900.

Yellow Jacket is more in favor; has met with a single sale at $1,100; holders generally firm at $1,200.

Chollar has declined to $306. This decline has been occasioned by the injunction of the Potosi having been made perpetual against the Chollar.

Lady Bryan still continues to be largely dealt in; 7,436 share have changed hands since our last issue, at fluctuating rates—ranging from $43 to 70, closing at 52. It closed with an upward tendency.

Nevada (J. G.) has declined from its last week's figures. Opening at $190@195, it closed yesterday at 142.

North American has been largely enquired for and has formed an important feature of the week. This stock has advanced from $146 to 177 at last evening's board. This advance is attributable to the reported probability of a favorable compromise with the Uncle Sam company.

North Potosi has been but little enquired after. Its quietness may be attributed to the uncertainty attendant upon the issue of its suit with the Savage, which will be called up on Monday.

Burning Moscow has been less enquired after than last week; 323 shares only have changed hands the past week. The sales yesterday ranged from $96@108.

Buckeye is less active, at slightly declining rates.

We quote Pride of the West at $83; Chas. Cuny at $7½; Sierra Nevada at $74; Adriatic at $12; Baltic at $150@160; Empress at $30; Gold Cañon at $25; Baltimore American at $40; Melones at $50; Michigan at $30; Burnside at $11; Caledonia Tunnel at $21; Blue Ledge at $22; Crockett at $5½; Paris at $5; Desert at $10; Central America at $5; Nightingale at $17; Santa Rosa at $5, Palmyra at $3.

Daney is inactive at $120, and Bullion at $71. Overman has been heard from at $215, and Sacramento & Meredith at $5.0

Kohler Brothers may be quoted at $13; Beaver at $21; Herman inactive at $40@42; Echo at $25; Rogers, F. D., has been heard from at $38, buyer 30 days; Keystone, V. D, at $35; Crown Point Ravine at $5½; Uncle Sam, F. D., at $5, and Table Mountain Copper at $5; San Carlos at $10.

Real Del Monte has ceased to attract much attention. The sales of the week have ranged from $37@48, closing at $38.

Wide West is quiet at $20; Utah at $18.

We quote Coso at $4; Fanny Rayne, O. R., at $25; De Soto at $40; Ben Franklin at $4; Gray Eagle $7½; North Star, R. R., $25; Rosario, Mexico at $15.

New Type for Reese River.—Mr. Fairchild was in the city this week purchasing an extensive assortment of material for the purpose of bringing the *Reveille* out in daily form. We are pleased to note this evidence of prosperity on the part of the town of Austin and its enterprising publishers.

WASHOE STOCK MARKET.

SALES AT THE VIRGINIA AND GOLD HILL STOCK BOARDS

Bullion, G. H., 4 at $80. Jewett & Sheppard, 225 at 7½@10½, b 30. Keystone, G. H., 20 at 25. Moss, Va., 10 at 20. United American, 40 at 5; 25 at 10½. Kentucky. 40 at 4. North American, 20 at 137; 27 at 140; 20 at 137½; 8 at 102½. Winnegardner, 40 at 2¼. Harold & Argo, 120 at 5@6¼. Pony Express, 55 at 4½@6¼, b 30. Silver Vale, 80 at 3½; 30 nt 3. H.) 8 50; Sutro 2 50; Shamrock, 3 50; Occidental Consolidated 1; Nightingale 2 50; Champion 1 50; Uncle Sam 5; Allen 28; Consolidated Brotherhood 2 25; Milton 25; Ponce de Leon 2; Consolidated Company 40; Crown Point Ravine 6; Gentry 3; Lord Byron 6; Uncle Sam 4; North Ophir 6; Live Yankee 3.

A Prophecy.—The Humboldt *Register* thus prophecies: "Taking the past as a guide for the future, we can safely predict that in ten years from this time Nevada Territory will have a population of five millions! Her alkali plains will be threaded with railroads; she will be connected by rail with the Pacific and Atlantic oceans. Mines rich as the Ophir will be successfully worked in allparts of the Territory; nor will we then be circumscribed to the business of mining for gold and silver. Our mountains of almost pure copper will be of value; our abundance of the best iron ore in the world will be brought into use, and our acres of the purest salt abundant for the use of the whole world, lying ready to be sacked, will then find a market."

The Howell's Crushing Machine, elsewhere noticed in connection with the Golden State Foundry, was manufactured at the Pacific Iron Works.

Business Directory of San Francisco.—Messrs. Stillwell & Co are said to be meeting with excellent success with their important undertaking, and the public will soon be furnished with a conveniently arranged book, containing the advertising cards of our leading firms, with a historical sketch of each upon the opposite pages.

Black Sheep.—James H. Shepard, having received subscriptions for this paper in May last, and failed to account to us for the money received, we are under the necessity of announcing him as a "defaulter." Parties holding his receipt, prior to this notice, for the Press will be supplied with the subscription due by addressing us.

The Shafter Mining Advertising Bill was amended in the Assembly and returned to the Senate, which body concurred in the amendments, and that is all the information furnished the dear public upon the subject by the reports of the daily press. They term it an "important bill," but fail to inform the interested stockholders what its amendments and peculiar provisions are. The bill is certainly having a very silent and shady passage. An act permitting the sale of mining shares within ten days from the time the shareholder's name is first published as delinquent, should certainly receive a grave and careful consideration from our Chief Executive, who has nobly and faithfully discharged his duty in the examination of all bills of *special* and *unnecessary* legislation.

Capt. Kidd's New Boat, designed for an Independent Opposition Line between this city and Sacramento, is fast approaching completion. The ways are all prepared, and she will be launched at the next spring-tide—probably towards the close of next week. She will be ready to run very soon thereafter. This is a fine modeled craft, and for staunchness and neatness of finish will far surpass the ill-fated Nevada.

The State Geological Survey.—The Senate has passed a bill which continues the Geological Survey for the ensuing year.

Send them East.—Do you buy papers to send to your friends at the East? If so, please reflect that no other paper published in the State can be more acceptable to the majority of your friends than the Mining and Scientific Press. It contains a very large amount of valuable reading, nearly all relating to California and her leading interests—just the kind of general information you would give your friends if you should write. It can be had at the office of publication, neatly done up in wrappers, for mailing, at one bit per copy.

Savage Mining Company, Zinc House District, Nevada County, Cal.—San Francisco, March 26th, 1864.—A Stockholders meeting of the Savage Mining Company will be held at the Office of the Company, 615 Clay street, on Monday May 2nd, 1864, at 9 o'clock A. M. By order of the Board of Trustees.
14-4t M. G. ELMORE, Sec'y. *pro tem.*

Wide West Copper Mining Company, Office 615 Clay street, San Francisco, March 26th, 1864.—Notice is hereby given that an assessment, No. 3, of thirty cents per share was this day levied on each and every share of the Capital Stock of the Wide West Copper Mining Company, payable in U. S. Gold Coin, to the Secretary at the Office of the Company or to J. M. Pike, Superintendent Copperopolis. By order of the Board of Trustees.
14-4t M. G. ELMORE, Sec'y.

Enterprise Copper Mining Company, Placer County, Cal.—Office 615 Clay street, San Francisco.—At a meeting of the Board of Trustees of this Company, held March 12th, 1864, an assessment (No. 12) of 50 cents per share was levied upon each and every share of the capital stock of said Company, payable immediately, in gold coin, to Thos. Levy, Treasurer, at Lincoln, Placer county, or to the Secretary, at the office of the Company. The Board also gives notice that whatever assessments have been paid in on Numbers 7 to 11 inclusive will be credited on Assessment No. 12. By order of the Board of Trustees. M. G. ELMORE, Sec'y.
San Francisco, March 12th, 1864. 14-tf

Roderick Gold and Silver Mining Company, Reese River Mining District, N. T.—Notice is hereby given, that at a meeting of the Board of Trustees of the above named Company, held this day (March 31st, 1864,) at the office of the Company, an Assessment of two dollars ($2) per share was levied on each and every share of the capital stock of said Company, payable immediately, in gold coin, at the office of the Secretary, No. 224 Montgomery street, San Francisco, or to Julius Siehel, Corresponding Secretary, at Austin, N. T. WM. T. ATWOOD, Secretary.
San Francisco, March 31, 1864. 14-4t

Index Mining Company (Location, Copper Canon District, Copperopolis, Cal.)—Office, 415 Montgomery street, San Francisco, March 30, 1864.—Notice is hereby given, that at a meeting of the Board of Trustees of the Index Mining Company, held March 23, 1864, an Assessment of fifty cents per share was levied upon the capital stock of the Company, and made due and payable immediately, in U. S. coin, to the Secretary, at the office of the Company. Certificates of stock are now ready for delivery on payment of this assessment.

☞ The first annual meeting of the Stockholders of the Index Mining Company will be held at the office of the Company on SATURDAY EVENING, APRIL 30, 1864, at 8 o'clock, for the adoption of by-laws, election of Trustees for the ensuing year, etc. By order of the Board of Trustees. [14-5t] RICHARD C. ALDEN, Sec'y.

Puritan Gold and Silver Mining Company, Devil's Gate District, N. T.—Notice is hereby given, that the Trustees of the Puritan Gold and Silver Mining Company have this day levied an Assessment (No. 2) of fifty cents on each and every share of the capital stock of said Company, payable immediately, in gold coin, to the Secretary; at the office, No. 620 Washington street, San Francisco, or to H. W. Arnold, at Silver City, N. T.
March 31st, 1864. (14-4t) H. B. CONGDON, Secretary.

A New Blasting Powder.

The Washington correspondent of the Sacramento *Union* gives the followiug interesting particulars with regard to a new blasting powder, the invention of which has already been noticed in this paper:

This morning a party of Californians were invited to go out to a quarry near this city to witness the experiments to test the value of a new kind of powder for blasting and otber purposes, invented by a Dr. Field of Wilmington, Delaware. The peculiarity of the new article consists in its being made up in two separate compounds or ingredients, which are mixed upon the spot just before using. The color of these ingredients is different, one being black and the other white; they are non-combustible when separate, it being impossible to unite or detonate them; but equal parts of each being mechanically mixed, a new compound is formed, wbich is highly explosive, being in fact like any other powder, except tbat its specific gravity is greater, and its explosiveness, or *strength*, is much greater. A bole was drilled in the face of the quarry to a depth of four feet, and about eighteen inches of the powder being put in and tamped, it was fired in the usual way, and the explosion which followed was, all the workmen on the spot said, almost twice as effective as tbe ordinary powder would have been under tbe same circumstances. A test witb some of the same material in a rifle also showed great strength as well as cleanliness, the lock or barrel showing no fouling whatever, after repeated discharges. The inventor claims that this gunpowder can be mannfactured for sale at ten, twelve, sixteen or eighteen cents per pound, tbe price of the article varying according to its strength. He also says tbat the ingredients being obtained, the powder can be ground up therefrom in an ordinary handmill, in a quarry or on tbe field, no expensive machinery being needed. Tbis simplicity of the means of its manufacture is the cause of its great cheapness, Dupont's machinery costing millions, and his powder now sells for twenty-four cents per pound. The non-explosive character of the component parts of the powder, when separated, being complete, it would be a valuable article for California consumption, as it could be carried thither in passenger vessels, or in such craft as now oblige an extra charge to be made on account of the extra hazardous character of the cargo. Now, as the gases generated are less noxions than the ordinary gunpowder, and dampening of the separate ingredients does not injure them if they are dry when mixed, it would appear that the new article will be invaluable for our mines and for general blasting purposes in California. The various experiments tbis morning were certainly highly satisfactory, and if the explosive mixture is all that it is claimed to be, there will certainly be a revolution in the gunpowder trade very shortly, and in this matter our California people are more interested than the citizens of any other locality.

China *vs.* Horse Power.—A correspondent of the *Morning Call*, over the signature of "Inventor," made a suggestion, a few days since, that man-power might be more economically employed in driving our city railroad cars than horses. "Inventor" says:—

By a simple improvement in the cars the horses can be done away with, and China, or man-power, substituted. One Chinaman would be equal to two horses, and the cost of feeding and shoeing him would be nothing in comparison to tbe horses; and, besides, he could groom himself. The car can be so constructed that he will tread with his feet on board—an apparatus that will give the car a greater speed than possibly can be done by horse-power.

Tbat is, one Cbinaman, by treading with his feet upon "an apparatus" (it must of course be an apparatus which will require a similar movement of the body and a like action of the muscles, to that required in ascending a ladder), will be able to raise 66,000 lbs. one foot high in one minute (for that is equivalent to a two-horse power); or, with a load on his back, which, added to his own weight, shall be equal to 200 lbs., he must be able to mount a ladder at the rate of 5½ feet per second, or 19,800 feet per hour. In order to carry out tbe idea of "Inventor," a Chinaman, or some other man, weighing 200 lbs., or carrying a load to bring him up to 200 lbs., must, in ten working hours, be able to thus mount a ladder 37½ miles high! We fully agree with "Inventor" that "we are living in a fast age;" but we must confess at being a little "startled" at the possibility of such an achievement as he has supposed.

Mining Notices.

McComb Gold & Silver Mining Company, Reese River District, Lander County, Nevada Territory, Office No. 1 & 2 Government House, corner of Washington & Sansome Sts., San Francisco.—Notice is hereby given that in accordance with the laws of the State of California, and a resolution adopted by the Board of Trustees of the McComb G. & S. M. Co., there will be sold at public auction at the Office of the Company, at 11 o'clock A. M. on Saturday, the 30th day of April 1864, so many delinquent shares of the Capital Stock of the McComb G. & S. M. Co., standing in the names of the following persons as will be necessary for the payment of assessment No. 1 of 50 cents per share, levied Nov. 28, 1863, together with costs of advertisement and expenses of sale, unless said assessment and charges are previously paid to the Secretary at the Office of the Company.

Bay State Gold & Silver Mining Company, Turnback District, Tuolumne County, Cal.—At a meeting of the Board of Trustees of the Bay State Gold and Silver Mining Company, held the 23d day of March A. D. 1864, an assessment (No. 4.) of two ($2) dollars per share on each and every share of the Capital Stock of said Company, was levied, (for a Mill fund), payable immediately, in U. S. Gold Coin, to the Secretary, at the Office of the Company, southeast corner of Howard and Second Sts., San Francisco. By order of the Board of Trustees. J. F. HARRIS, Sec'y.
San Francisco, March 24th, 1864. 13-4t

Great Western Gold & Silver Mining Company, Keyes District.—Notice is hereby given, that by a resolution adopted by the Board of Trustees of the Great Western Gold & Silver Mining Company, at a meeting held on the 17th day of November 1863, an assessment of sixty-five cents was levied upon every share of the Capital Stock of said Company to be paid immediately in U. S. Gold Coin, to the Secretary, at the Office of the Company, No. 27 Government House, corner Washington and Sansome Sts.

Also, an assessment of twenty-five cents per share, on each and every share, levied on March the 17th, 1864, to be paid immediately, in U. S. Gold Coin, to the Secretary at his Office.

C. A. CRANE, Sec'y.
San Francisco, March 19th, 1864. 13-5t

Mount Eden Mining Company, Owen Lode, Gold Hill District, N. T.—Notice is hereby given that the Board of Trustees of the Mount Eden Mining Company, at a meeting held March 17th, 1864, levied an assessment (No. 2,) of fifty cents on each and every share of the Capital stock of said Company, said assessment payable immediately in U. S. Gold Coin to the Secretary at the Office of the Company, No. 620 Washington St., Room No. 3, or to Franklin Morgan, Esq., Superintendent at the mine.

13-5t H. B. CONGDON, Sec'y.

Pleayne Gold, Silver and Copper Mining Company, Bear Gulch, Calaveras Co.—At a meeting of the Board of Trustees of the above Company, on the 17th day of February, 1864, an assessment of six cents per share on each and every share of the Capital stock of the said Company was levied, payable on or before the 22d day of March, 1864. And Notice is also hereby given that the first annual meeting of the Stockholders of the said Company will be held on Tuesday the 22d day of March 1864, at the office of the Company at Copperopolis, for the purpose of electing officers for the ensuing year, for the adoption of By-laws, and for the transaction of such other business as may come to its notice. All Stockholders are respectfully requested to attend.

By order of the Board of Trustees,
L. HONIGSBERGER, Sec'y.
Copperopolis, Feb. 17th, '64. 9v8-4t

Copperopolis, March 22d. 1864.

The above meeting has been postponed until the 20th of April next.

Record of New Incorporations.

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Coa Vortilla G. & S. M. Co., Sinaloa district, Mexico; Charles S. Norris, C. W. Felton, S. L. Franklin.

Golden Circle G. & S. M. Co., Lander county, N. T.; H. B. Osborn, Joseph Healy, G. H. Johnson, J. H. Bullard, J. W. Myrick.

Stonington G. & S. M. Co., Nevada county, Cal.; Wm. Berry, A. H. Murdock, David Wilder.

Starr King G. & S. M. Co., Lander county, N. T.; P. A. Wood, A. Lander, A. J. Downer, M. M. Barker, Isaac Swain.

Ruby Copper M. Co., Del Norte county, Cal.; C. Schenck, T. H. Follingsby, E. Rondell, W. L. Howd, — Hastings.

Downey S. M. Co., Lander county, N. T.; Wm. Molony, Michael Price, Maurice Walsh.

Black M. Co., Chimewavo district, Cal.; Andrew J. Chase, S. A. Hall, L. A. Morgan.

Durango S. M. Co., Lander county, N. T; E. G. Barton, N. P. Perrine, James J. Walker.

Carlota G. & S. M. Co., Lander county, N. T.; J. S. Friedman, C. Spencer, J. A. Reichert, E. B. Drake, H. W. Bradley.

Annita G. & S. M. Co.; same as above.

Teresa Robles S. & S. M. Co.; same as above.

Sierra Plata S. M. Co., Chihuhua, Mexico; Richard Chenery, E. D. Shirland, H. B. Brooks, John Bensley, A. Powell, Jr., C. W. Riley, Isaac A. Davis.

North Superior C. M. Co., Plumas county, Cal.; A. J. Ford, Allan Meade, O. D. Peck, Wm. Bell.

Wyandotte M. Co., Lander county, N. T.; W. Augustus Knapp, O. Anderson, Isaac Thurber.

Tomoco C. M. Co., Sonora, Mexico; Geo. T. Middleton, Wm. Gill, Wm. P. Humphreys.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of incorporation in Nevada Territory:—

Ophir No. 2 O. & S. M. Co. American Flat district; Jacob Smith, J. W. Phillips, W. Clancy, W. H. Howard.

Little G. & S. M. Co., Blue Sulphur Springs district; S. Wasserman, John Wallace, A. Hecht, H. Friedentlal, A. Cohen.

New Virginia Consolidated G. & S. M. Co., New Virginia district; J. Piontz, G. H. Dorr, W. W. Bishop, D. Wood, P. Lynch.

Paul Pry G. & S. M. Co., Sulphur Springs district; Wm. Burke, Thomas Riley, P. A. Sawyer.

IMPORTANT!

The Best is Always the Cheapest!

THE PHŒNIX

INSURANCE COMPANY,

OF HARTFORD, CONN.,

And the $75,000 Deposit Act.

THE BILL REQUIRING ALL FOREIGN INSURANCE COMPANIES to make a special Deposit of $75,000 in Stocks of the United States, of this State, or stocks or bonds of the city, or city and county of San Francisco, with their bunker or bunkers in this city, on the FIRST DAY OF MAY, 1864, having become a law, it may be of interest to the insuring public to know that the PHŒNIX INSURANCE COMPANY, OF HARTFORD, IS READY TO COMPLY WITH ITS REQUIREMENTS AT ONCE. The Company has over $50,000 in city and county of San Francisco bonds, already on deposit with Messrs. Banks & Co.

R. H. MAGILL, General Agent.

CITY OFFICE—In the "James King of Wm." building, southwest corner of Montgomery and Commercial streets, San Francisco.

PRATER'S CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, HAVING completed arrangements for its manufacture at the Fulton Foundry, in this city, now offers it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHALER & THAYER'S REDUCTION WORKS,

NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

"CHIPPINGS."

During the last sixty years, while the popnlation of France has increased but 37 per cent., and that of England 121 per cent. (Prussia increasing but 79 per cent. in forty-five years), the increase in the United States has been 593 per cent.

It is said that fifty thousand of the best laborers in Lancashire and other manufacturing districts in England, thrown out of employment by the stoppage of the trade in cotton, would come to America if they had the means of doing so.

In a recent conversation with an American gentleman in St. Petersburg, Prince Gortschakoff, discussing the Emperor's policy, declared that the progress of Russia within the next two years would astonish the world.

The new comet discovered by Professor James C. Wilson, of Ann Harbor, January 13th, is said to be rapidly approaching the earth, and will soon be visible.

The city of Sacramento, according to a late report, contains ten miles of sidewalks.

The value of flax grown in Ireland last year was upwards of $20,000,000.

A cannage was brought into Napa, a few days since, from a ranch 14 miles distant, which is the largest ever seen in those parts. With all the refuse outside taken off, it measured 105 inches in circumference.

Diptheria is making such havoc in Lunenburg, Vermont, that there is not at present a single school in the town in operation.

A castor bean plantation is to be planted near Los Angeles, and a mill erected to press the castor oil.

The announcement that the steamer Sierra Nevada was lost, turne out to have been a false rumor.

The Digger Indians of California, it is generally supposed, have no idea of any religion of their own. This opinion, however, is quite at variance with the observations of an early visitor to this region, who wrote many years ago as follows:—"The Indians say their adorations to an evil spirit, who is supposed to preside over everything, and whose displeasure they wish to avert by worship. This spirit is believed to be supreme and unassisted by any inferior agents. They have a full conviction of a future existence, and expect to enjoy happiness after this life in some delightful island in the sky, which happiness, being measured by their present ideas, consist in sensual gratification."

California Slate Pencils.—We made a notice some few weeks since, of the fact that a kind of material was found on some portions of the sea coast of this State, which might be used instead of the ordinary slate pencil. A correspondent of the Monterey *Gazette* explains the true character of this material as follows:—I noticed not long since, in one of the interior papers, an article entitled "Natural Slate Pencils," or something like it. The writer went on to say that there is a sort of seaweed found on the Coast of California, that answered all the purposes of a slate pencil, etc. Those persons who live near the sea-shore, will probably know at once what is referred to as "natural slate pencils," but to those who live in the interior, and are not in the habit of seeing salt water, it may be interesting to learn that the slate pencils so called are the spines of the sea urchin, (or the sea egg as it is sometimes called.) It is an animal of the genus Echinus, and of the family Radiata, or star fishes. It is round and flatteued, like a large flat apple, with a thin shell over it, covered with movable spines two or three inches long, and not more than an eighth of an inch thick. These spines being movable where they are joined to the shell, the animal by this means is capable of locomotion. Sea-eggs are very common everywhere on this coast, and are eaten by many people. The spines may be used, and frequently are used, for pencils for school children to mark with on their slates.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

Before Cutting the Leaves of this journal, stitch each No through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference.

MINERS' FOUNDRY

—AND—

MACHINE WORKS,

First street, between Howard and Folsom streets,

SAN FRANCISCO.

Every description of Iron and Brass Machinery, the **Best** and **Most Economical**, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz mill machinery, Mining Pumps, Amalgamators, Retorts, Etc., Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

tf. HOWLAND, ANCEL & KING.

Vulcan Iron Works Company.

P. Torquet,.....Manager.

Steam Engine Builders and Boiler Makers,

Iron Founders and General Engineers,

Pumping, Hoisting, Mining and Quartz Crushing Machinery. Shoes and Dies of the hardest iron. Russia Iron Punched Screens, Steamboat Machinery, Saw, Flour and Sugar Mills. High and Low Pressure Boilers of all styles. Jonval and other Turbine Water Wheels with latest improvements.

A. S. HALLIDIE & CO.,

WIRE ROPE MANUFACTURERS.

Established 1857.

Office, No. 412 Clay street—Works, North Beach,

SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for

HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

WHEELER'S

Amalgamating and Separating Pans

It is acknowledged by all who have examined the principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners, Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.

uol6-tf ZENAS WHEELER.

To Quartz Miners.

All persons interested in mining machinery are invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

sep21

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the buyers of a card, placing the coins between the layers and sealing the edges together.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

For sale, Wholesale and Retail, by SAMUEL ADAMS, U. S. Drug Store, corner of Pine and Kearny Streets, San Francisco. 6v8-2m

HEPBURN & PETERSON'S.

AMALGAMATOR.

The Subscribers would call the attention of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

All the mines of the above named Companies are located in Reese River Mining District, Lander county, Nevada Territory. By order of the Board of Trustees. D. B. FRANCIS, Sec'y.
Office, No. 509 Clay street. 11v8-4t

Bodie Bluff Consolidation Mining Company, Bodie District, Mono Co., Cal.—February 27th, 1864.—At a meeting of the Board of Trustees of the above named Company, held this day at the Secretary's Office in the town of Aurora, the following among other proceedings were had, viz:—*Resolved*—That an assessment No. 3,) of one dollar upon each share of the Capital stock of the aforesaid Company be and the same is hereby levied, payable immediately in U. S. Gold Coin, or its equivalent in Legal Tender Notes, to the Secretary, at No. 614 Montgomery Street, San Francisco. *Provided*—That all the Stock upon which the assessment (No. 2,) of Fifty cents per share, levied June 13th, 1863, has been paid, only fifty (50) cents per share shall be paid under this assessment.

Resolved.—That the Transfer office of the Company be removed to San Francisco. By order of the Board of Trustees.

11v8-5t F. K. BECHTEL, Sec'y.

Pride of Nevada Mining Company, Reese River District, Nevada Territory.—Office, No. 620 Washington St., San Francisco.—Notice is hereby given, that the Board of Trustees of the Pride of Nevada Mining Company at a meeting of said Board, held March 8th 1864, levied an assessment (No. 1,) of fifty (50) cents on each and every share of the assessable stock of said Company, said assessment payable immediately in U. S. Gold Coin, to the Secretary, or to A. E. SHANNON, Superintendent.

11-4t H. B. CONGDON, Sec'y.

Billet Gold & Silver Mining Company, Gen. Scott Ledge, Augusta Mining District, Lander County, N. T.—Notice is hereby given that at a meeting of the Board of Trustees of this Company, held this 5th day of March, A. D. 1864, an assessment of Twelve and one half (12½) cents per share was levied upon each and every share of the Capital Stock of the Company, payable immediately to the Secretary, in U. S. Gold Coin, at his Office, No. 509 Clay Street, San Francisco, or to S. F. AMBLER, at Austin, N. T. By order of the Board of Trustees. D. B. FRANCIS, Sec'y.

11v8-4t

Sonoma Ledge Silver Mining Company, Reese River District, N. T.—Notice is hereby given that at a meeting of the Board of Trustees of the Sonoma Ledge Silver Mining Company, held at their office in San Francisco, March 12, 1864, an assessment (No. 4) of one dollar, was levied on every share in the capital stock of said company, payable immediately, in United States coin, to Julius Sichel, at Austin, N. T., or to DAVID WILDER, Secretary,

AND SCIENTIFIC

Mining Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

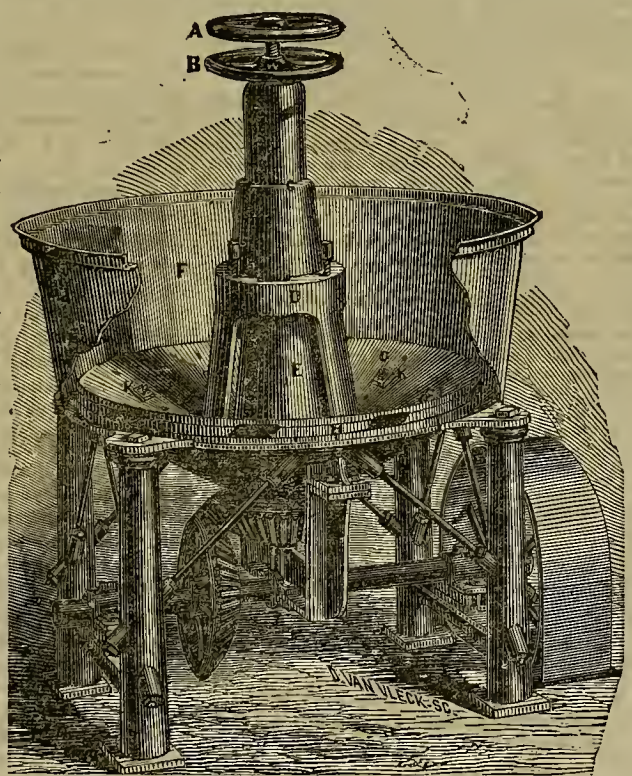
VOLUME VIII. SAN FRANCISCO, SATURDAY, APRIL 9, 1864. NUMBER 15.

Contents:

No. 15—April 9, 1864.—Hepburn & Peterson's Amalgamator—Illustrated; Mental Growth of San Francisco; Owens River; Reese River Bullion; Augustin's Method of Extracting Silver from its Ores by the Use of Salt; Rock Springs District—Colorado; Mining Gossip; An Act Concerning Assessments and Advertising Delinquent Stocks; Mechanical Department—The Economy of Fuel and Heat, "An Enquirer" Once More; Patent Department—James' Gas-Lighting Invention, Drying Coal by Centrifugal Force; Desulphurizing; Glasgow School of Mines; Mining Share Market; Washoe Stock Sales; City Sales; Incorporations; Whitman Mine; Letter from Austin.

HEPBURN & PETERSON'S AMALGAMATOR.

The annexed engraving is a representation of Hepburn & Peterson's Amalgamator. The chief object of the inventors of this amalgamating pan has been to devise some means to obviate the inconveniences frequently met with in other pans and arising from a tendency of the sands to pack when in a certain condition, as it becomes necessary to stop the running of the machine. Another desirable object was the production of a pan which would admit of working the sands in a more compact state—that is, by the admixture of less water, whereby the reduction is made to progress much more rapidly. These objects Messrs. Hepburn & Peterson claim to have effected, in an important degree, by the peculiar construction of the bottom of their pan, which, as will be observed by the annexed illustration, is inclined toward the centre, or shaped like an inverted cone—the dies being affixed to this cone-shaped surface and the mullers made to correspond. The pulp being thrown into the pan, and the mullers set in motion, their action is such as to throw that portion of the pulp which finds its way between the grinding surfaces to the circumference, whence, by gravitation, it descends to the centre, and thence again beneath the mullers. A constant and active current is thus established, which cannot be done by the same motion when set in operation on a level surface. It will thus be seen that all necessity for wings or scrapers is obviated, which are oftentimes a hindrance to starting the pan after it has become packed from stopping, especially when it is charged with coarse sands, but slightly advanced towards a pulpy consistency. There are no conditions, in ordinary working, where this pan may not readily be started without removing or thinning down the pulp, by simply elevating the mullers a trifle by a convenient set screw. These pans were first brought out last summer, since which time they have become quite extensively introduced. They are much more simple in their construction than most pans in use. They may be seen in operation at the Gould & Curry mill, Silver State Reduction Works, the Zephyr Flat mill, Pioneer mill, Washoe; also at the Belden and Gregory's mill in Esmeralda. The pans are manufactured at the Vulcan Foundry, in this city, where they can be examined at all times. Messrs. Hepburn & Peterson have also a Separator, which is employed for separating the amalgam and quicksilver from the sands after the latter have been thoroughly reduced in the pans.



HEPBURN AND PETERSON'S AMALGAMATOR.

During the month of March merchandise to the value of $1,026,880 was exported from San Francisco.

Lecture on the Mining and Chemistry of Metals.—Professor Price will give a lecture on the above named subject, at Dashaway Hall, in this city, on Wednesday evening next. This lecture is the closing exercise connected with the Professor's first class in mining, which has been holding its sessions at the rooms of the Powell Street High School. Tickets, fifty cents, to be had of any of the members of the class, and at the principal bookstores. The lecture will be given with direct reference to the bearing which the subject has upon practical mining. We trust it will be but the commencement of a series upon kindred subjects, which may hereafter be given by the Professor and others qualified to instruct in the various departments of mining education.

[Written for the Mining and Scientific Press.]

Mental Growth of San Francisco.

BY A SPECIAL CONTRIBUTOR.

In pursuance of the plan heretofore adopted in this series, we now proceed to a higher grade of facts, or such as we find developed on the intellectual plane. And here the growth is even more astonishing than that of the merely physical forces. Going back to first principles, we find the elementary power of all civil progress in

THE PRESS;

And to this great engine of universal intelligence, let us give our present attention. The first paper or periodical of any kind, ever issued on the Pacific coast, was *The Californian*, a weekly newspaper, which first appeared at Monterey, August 15th, 1846. At first, a small portion of the sheet was printed in Spanish, for the benefit of the natives; but the Anglo-Saxon power dominated here, as elsewhere, and the English language soon monopolized the whole sheet. Commodore Stockton is said to have originated this paper, though it was published and edited by Messrs. Colton & Semple. That they had formidable difficulties to contend with, will appear from the fact that the type used was a Spanish font, picked up in an old cloister, and the paper was such as is used for wrapping cigars. As there is no "w" in the Spanish alphabet, two v's (vv) were used instead, giving a ludicrous appearance to the poor and primitive sheet, only that there is a look of such earnestness in its wan little face as we could hardly feel like laughing at under any circumstances. This was the father of California newspapers. Nor should we, like smart Sophomores, ridicule, or in any way make light of the uncomely garb of our paternal relative in the paper line, but rather say to ourselves that the spirit which could achieve this, with such a vast disproportion between means and ends, has shown us that there are no bounds to its progress, and no limits to its power.

This capability began to make itself felt in the very next step. The California *Star*, the first paper published in San Francisco, though a small sheet of four pages, fifteen inches by twelve of type, exhibits a very creditable degree of progress, in manner, matter and arrangement. The first number appeared January 7th, 1847, being published by Mr. Samuel Brannan, and edited by Dr. E. P. Jones. Both of these papers, having come to a sudden close by the desertion at once of patrons and printers, in the overwhelming mania of the gold fever in 1848, remained latent for the space of five months. November 18th of that year they were revived, and formally united, under the title of the *Star and Californian*, and from this sprang the *Alta California*, the first number of which appeared January 4th, 1849.

And now, from these small beginnings, what have we? Eight daily papers, twenty-seven weeklies, six monthly and two tri-weekly papers are issued in this city. We have also seven monthly periodicals and three annuals. Of these publications, seven are literary, four political or partizan, eight independent, six moral and religious, four are devoted to agricultural and mining interests, one is mercantile, two are medical and one nautical. Three are in German, three in French, one in Italian and one in Spanish. Other nationalities have also their organs of representation. The Irish have two papers, the Mexicans two, and the Jews two. Of these publications, those which are devoted to some specific object present

highly honorable examples, and in this order should be observed the *Wine, Wool and Stock Journal*, which is an elegant monthly magazine, of intrinsic and substantial value. Nor should the brave-hearted Lisle Lester be passed by without a word of kind encouragement and good cheer. All may not know that her arduous labor involves the double task of providing means to sustain her periodical, as well as power to superintend and edit it. Being thus, to a considerable extent, drawn away from it, mistakes and imperfections sometimes creep in, which, by and by, she will not be subjected to.

It may be safely affirmed that there is no community of equal numbers on the face of the globe which exhibits such an array of journalistic and literary ability. The weekly papers of the State are characterized by an extraordinary amount of talent. The daily press exhibits great vigor and energy, while the interior and provincial papers are marked by uncommon raciness, originality and vigor.

Yet it must be confessed that, with all this magnificent array, which, in its varied characters of spirit, form and language, drops from the press daily, weekly, monthly, we have no proper literature—nothing that corresponds with the *Atlantic Monthly* and the best periodicals of the British press.

A true literature is like a perfect human structure, where all the powers and faculties of the mind move and act harmoniously. It is the spirit and essence of all science—all art—clothed with a finer organism, and enriched with a more excellent beauty. Hence it must represent all the faculties of the mind, the affectional, the reflective and the imaginative. But, in our so-called literary papers, for the most part only the affectional faculties are represented. Our literature, almost so far as we have any, is eminently sensational. And, let me now ask, with all our power of production and appreciation, why is this? It is because the Press has suffered the sceptre to depart out of its hand. It is unmindful of its divine prerogative. It cannot, or will not, exercise its own proper function. Instead of leading the public mind, and forming from high models the public taste, it allows itself to be led by a depraved and sickly sentiment.

Again, I ask, why is this? Not surely because we have not talent or even genius among us that would be equal to the most excellent effort; not because there is not magnanimity enough to support our own literature at the necessarily higher prices; not because we have not appreciative power enough, to welcome and foster it, but because there has not yet appeared a literary publisher at once broad, strong, rich and free enough to give the people what their natural constitutions need, rather than what their puling appetites at once crave and sicken over. When there comes such a one—and he *will* come—a new fountain of intelligence will be unsealed, out of which the ministering genius and the appreciative taste shall alike draw and drink. Then a new era, important as any that have marked our rapid and brilliant history, will have dawned on the Pacific coast.

LIBRARIES.

The oldest and largest of these is the Mercantile Library, which now occupies convenient and commodious rooms on Montgomery street; but funds are constantly accumulating for building a larger and more eligible structure for its sole occupation, and with plenty of room for future growth. The Association was organized January 24th, 1853, since which time it has partaken of the rapid growth of everything around it. It now numbers 1,435 members, of whom 107 are life members, 71 honorary members, and 1,257 subscribing members. The library contains about 16,620 volumes, exclusive of lost, worn-out and missing books; about 1,514 having been added during the past year. The library is well arranged and classified, and has a catalogue both in analytical and alphabetical form. That the San Franciscans are a reading people is shown by the fact that by this library alone 35,702 volumes were loaned out during the last year. This noble institution speaks well of the large and honorable body from whom it originated—the merchants of San Francisco.

ODD FELLOWS' LIBRARY ASSOCIATION.

This library was organized December 30th, 1854, with about 100 volumes. It now contains over 10,000 volumes, among which are a large number of rare and valuable works on the history of this coast. It is doubtful if so fine a collection of works on this subject can be found in any other library. The greater part of the works of the old Spanish writers on our local history have been gathered with much care and research, and form a very valuable collection. Agents are now employed by the Association both in the Atlantic States and in Europe, collecting all that is extant upon this important and interesting subject.

Connected with this library is a reading room, where all the journals of the day are to be found constantly on file, so that an odd hour may be spent there, not only pleasantly, but profitably. It has also an extensive cabinet of valuable curiosities, embracing various specimens, illustrating the mineralogy, botany, conchology, ornithology, entomology and zoology of California. It is, in fact, a miniature museum, enriched by the wonderful resources of our Pacific home.

The library and cabinet are valued at upwards of $20,000. As this flourishing institution is supported solely by Odd Fellows, it speaks well for the literary taste of the Order. There has been issued during the past nine months (the library was closed three months on account of removal) 3,871 volumes. Among the rare and valuable works in this library may be mentioned Audubon's "Birds and Quadrupeds of North America," 15 volumes, three of which are of very large size; Lord Kingsborough's "Antiquities of Mexico," 9 volumes, text and colored plates, in imperial folio; a New Testament, printed at Rheims in 1532; a Book of Sermons, printed in 1480, and numerous other antique and valuable works, which the curious in the literary world can inspect for themselves.

LIBRARY OF THE MECHANICS' INSTITUTE.

There is no surer index of the strength and general capacity for culture among any people than the degree of taste developed among the working classes, and there is no more honorable testimony of this taste anywhere than we find in this library. And we do not judge of this matter merely by the size of the collection, but by the character of the books. Here are nearly 6,000 volumes of scientific and standard works, which are handsomely arranged in the fine large reading room, where the members may be seen at all hours of the day freely availing themselves of their collected treasures. Here, also, we find a cabinet containing several hundred specimens, illustrative of the different branches of natural history, with models of machinery, and many other rare, interesting and curious things. This library occupies the main hall of the fine, large and really elegant building, erected for its reception by the Association, on California street above Montgomery.

YOUNG MEN'S CHRISTIAN ASSOCIATION.

The selection of this library reflects much credit on the members. Perhaps there are few collections of 3,000 volumes that involve so great variety, and so large a proportion of interesting and valuable works. Of these, about 600 are religious, 222 biographical, 220 historical, 65 practical, 61 miscellaneous and 143 travels, including sermons, classics, fiction, the drama, philosophy, science and art, with bound magazines and periodicals. About 1,500 books are taken out annually, which indicates a large amount of literary and scientific interest, and shows that the end of the Association is being answered in the "moral, social and intellectual improvement of young men, of all denominations, by means of a reading room, supplied with all the religious and secular papers, magazines and periodicals, domestic and foreign." There is another important end, not perhaps sought, but yet attained, in this harmonious fusion of all faiths, which is thus invited. Broad and beneficent ideas of Christian tolerance and fraternal feeling are thereby cultivated, which cannot fail to wear away the harsh and corrosive angles of the old sectarianism. The third Monday of each month is set apart for debating and literary exercises, open to all; and a prayer-meeting, to which all of every denomination are made welcome, is held at the rooms, No. 629 Washington street, every Saturday evening.

The remainder of the libraries will be noted in the next number.

BOILER EXPLOSION IN COLORADO.—The steam boiler on the Gregory Lode, No. 2, recently exploded with a violence which sent it upward through the roof of the engine house and landed it some 300 feet distant, turning end over end by the force with which it struck the ground. Three men were slightly injured—none seriously, although the entire neighborhood was terribly startled by the crash and acrobatic movements of the huge iron cylinder.

INCREASE OF WEALTH IN SAN FRANCISCO.—It is estimated that the increase of the assessment roll of this city, for the present year, over that of last, will reach $19,000,000, which will be an improvement of 30 per cent. in one year! Eighty-five millions is set down as the present amount of taxable property in San Francisco. The assessment rolls of most places in the interior of the State will probably show a slight falling off.

OWENS RIVER.—The reports from both the mine, and the valley of Owens river are very encouraging. Hundreds of families, attracted by the favorable reports with regard to the climate and agricultural capacities of this region, are flocking thither from the less promising portions of the San Joaquin and Tulare valleys. The prospect of improved communication and cheap supplies thus shadowed forth appear to be operating as an additional stimulus to the miners in the neighboring mountains to push forward, with redoubled vigor, in the work of opening up their claims. Parties who have recently visited this office from those mines, have exhibited specimens to us and submitted assays, which, taken in connection with the accounts they and others gives leave no room to question the ultimate value of this region. We gather the following items from the Esmeralda *Daily Union*:—

The Union mill is running night and day on rock from the Eclipse. This company have made a rich strike in their mine. Exceedingly rich specimens of ore are being brought in from White Mountain. The rock shows virgin copper, and in some cases native silver is found with the copper. The Drummer Boy lead is turning out very rich gold rock, resembling the Santa Rita. The San Carlos Co. are pushing their mill forward with energy. Buildings are going up at San Carlos and Bend City. At the former place they are burning brick and lime.

Mr. Merriam, formerly of San Francisco, has brought out a photographing apparatus, and will take views of the towns, mills, etc. The sawmill at Big Pine is finished, and will soon be at work. Messrs. Slocum and Bell of San Carlos, are the proprietors. It is extremely well built, and is expected to furnish lumber in quantities soon. Fire clay, suitable for crucibles, fire-brick and the lining of furnaces, is found in great abundance in the neighborhood of Fleta Canon.

IMPORTANT TO VOTERS.—By the recent decision of the Supreme Court, the fact is established that an elector cannot vote outside of the district or ward in which he resides. Heretofore, for State officers, men have voted wherever they might have been, within the State on election day, and for county officers anywhere within the county. But by an especial act of the late Legislature, passed just previous to its adjournment, "soldiers" are allowed to vote wherever they may be, if within the limits of the State. This distinction between citizen soldiers and mere travelers is certainly in accordance with reason and justice. The soldier is away from his home on urgent and mandatory business of the the State: while the traveler, being abroad on private business or pleasure, is deprived of his elective franchise by his own voluntary act.

REESE RIVER BULLION.—The Territorial *Enterprise* of March 29th, notices thirteen bars of bullion, the product of one week's crushing by the Oregon mill, of ore from the North Star claim, in Reese River district. These bars weighed 6,747 ounces, and were estimated at the value of $7,574.92. They were of a most beautiful appearance, being nearly pure silver, much more so than the bullion from the mines in other portions of the Territory, which generally contains a considerable per centage of gold. The bars were assayed by Theall & Co., Austin, and not one dollar in gold was found in the whole thirteen bars. We are not aware of any other mine in the Territory that yields SILVER so nearly approximating to purity.

HOWLAND'S AMALGAMATOR.—This amalgamator, a Yankee improvement on the Freiberg barrel, appears to be winning its way into favor with the silver miners. Quite a number of these machines are now in successful operation. One of the largest size has recently been shipped to Hildreth's mill, Austin, Reese River. They are manufactured at the Miners' Foundry, in this city, one of the proprietors of which, Mr. Howland, is the inventor.

THE Mormons are much troubled at the constant irruption of Gentiles among them. The latter are increasing so fast that in a few years the saints will be outnumbered or remove to some other country.

Augustin's Method of Extracting Silver from its Ores by the Use of Salt.

The following is the most full and intelligible description of Augustin's Method of Extracting Silver with Salt Water, which we recollect to have met with. This description was written at Paris, in December, 1860, by Dr. R. H. Lamborn.

No metallurgic process springs like Minerva full grown and perfect from the brain of the inventor. Many years of experience, and the labor of many vigorous minds, have been necessary to bring some of our simplest processes to the efficient condition in which we find them. The method of Augustin, although it is sometimes considered as having inaugurated a new era in the treatment of silver ores, forms no exception to the general rule. It has a genealogy as long as that of a peer, which if any space permitted it would be interesting to trace back step by step. First to the system of amalgamating the copper matte, a long time in use at Mansfield, with which it has several points of resemblance, then to the European plan of amalgamation in casks, as introduced by Gellert at the Freiberg works in 1790, then back a decennium to the region at Schemnitz, where Born amalgamated Hungarian ores in copper kettles, afterwards—a long step—to the cordilleras of South America were Bartholomè de Medina, in the middle years of the fifteenth century invented the American system of amalgamation in heaps. This extended investigation would, however, be inconsistent with my present object, and hence we will pass at once to a consideration of the method of Augustine as is at present in use. The European plan of amalgamation, as is well known, consists of three chief processes. 1st. Converting the silver in the ore or product into chloride, by roasting. 2d. Decomposing this chloride and dissolving the silver produced in quicksilver. 3d. Evaporating the quicksilver and thus obtaining the silver in an isolated condition. Augustine retained the chlorizing roasting and introduced a new solvent in place of the expensive quicksilver, and a new plan for obtaining the silver in a separate condition. It is a fact long known to chemists, and, I believe, first noticed by Wetzler, who recorded it simply for its scientific value, that common salt when dissolved in water forms a fluid that has the power of taking chloride of silver into solution, a power that pure water does not possess in the slightest degree. The amount of chloride of silver that brine will take up has been made a subject of investigation by modern experimenters, and it has been discovered to depend upon the quantity of salt present and the temperature. Thus at 32° an almost insensible amount is dissolved, at 50° 0.0017 of the weight of common salt present will be taken up, and at 212° its capacity has increased to 0.0668 of the salt in the brine. Upon this strange property of salt water rests the fact that the ocean is a vast reservoir of silver, containing, according to the careful experiments and calculations of French chemists, not less than 2,000,000 of tons of the precious metal. Upon this same property of salt water rests the metallurgic process introduced by Augustin. In outline it consists:—1st. In preparing the ore or product containing the silver, for roasting, by grinding it to a fine powder, and then subjecting this powder to treatment in a reverberatory furnace with an addition of common salt, by which means the silver is converted into a chloride. 2d. In dissolving the chloride of silver in the roasted ore by means of hot concentrated brine and conveying it in solution to proper vessels for precipitation. 3d. In precipitating the precious metal in the form of cement silver by the agency of metallic copper, and in refining the silver so produced, for the mint.

At Freiberg, in Saxony, where I had an opportunity of studying this method practically, it is employed for extracting silver from a rich copper *matte*, that is obtained from cupreous silver ores in the course of the peculiar treatment known as "common lead smelting."

The cupola furnaces produce, beside the *rich lead*, which is sent to the process of cupelling, a sulphide of lead, iron, copper, silver, &c., which is concentrated by repeated fusions until most of the lead has been collected as rich lead, most of the iron passed into the slag, and a sulphide of copper, iron and silver obtained, which in the year 1859 contained an average of 69 per cent. of the first named metal, and 0.42 per cent. of the last.

This *matte* or *regulus* is broken into fragments by hand, and pounded to a fine powder beneath a series of heavy iron stamps. It is now carefully sifted through a brass sieve containing 2500 apertures to the square inch, and is in a condition to be submitted to the process of roasting. The furnace is of the common reverberatory class, but much smaller than those used in Mansfield by Ziervogel. The fuel employed is stone coal, and one attendant is sufficient to carry on the work. Four hundred weight of mineral are placed on the hearth at once, and the fire gradually increased in strength while the attendant stirs continually, and occasionally turns the charge entirely in the furnace, that every part may be exposed to an intense heat. At the end of about eight hours the proofs of complete roasting begin to appear; the powder becomes brown and earthy, the heat does not produce that interior glow which is an evidence of the presence of sulphur, and no fumes of sulphurous acid are to be perceived. Then the contents of the furnace are drawn out, allowed to cool, and carried to a mill resembling that usually employed for grinding corn, and after being ground and bolted is brought back to the furnace to be subjected to the chlorizing roasting.

The copper and iron of the regulus exist now partly in the form of sulphates, while the silver is present as a sulphate or in a metallic condition. The powder is placed in the same furnace, in charges of three hundred weight, and roasted for a short time, then mixed with five per cent. of common salt, and the heat and stirring continued for about three hours. During this time the chloride of sodium, or salt, is decomposed by the sulphuric acid of the sulphides, and the free chlorine thus formed combines with the silver, for which it has a strong affinity, until, nearly if not quite all of the valuable metal has taken the form of a chloride. The powder is now drawn from the furnace and carried in iron trays to the department devoted to lixiviation.

This is an elevated room containing a number of strongly made, round wooden vessels ranged in a manner similar to those at Wettstedt, which have already been described, in rows one above the other, so that the fluid poured in at the upper level will descend step by step to the bottom. Besides the vessels a large vat at a still higher level holds the store of hot brine, which is heated to the proper temperature by passing steam through it. Eight of the above mentioned tubs occupy the upper row, and in these the dissolving of the chlorine of silver takes place. The powder, still warm from the furnace, is placed in each to the amount of 6 cwt., and the hot brine allowed to run in upon it. The fluid passing through the mineral mass comes in contact with the fine particles of chloride of silver, takes this compound into solution and carries it through a filter of linen and straw that forms a false bottom of the tub, and thence by troughs into two reservoirs, where the earthy particles mechanically suspended in the fluid are allowed to settle.

The process of lixiviation is continued for each tub of powdered mineral, until a bright copper plate, placed in the steam flowing through the filter shows no indications of a silver precipitate. The solution of the precious metal is now assumed to be as complete as possible for the present, and the contents of the tubs are assayed, that the amount of silver remaining may be determined, and that no loss from unperceived accidents in roasting or dissolving may occur. When more than one thirty-third per cent. remains, the powder is again sent to the furnace, roasted with salt, and subjected to another treatment with brine, as above described. If containing less than one thirty-third of a per cent., which is generally the case, it is carried to the appropriate furnaces and fused for copper.

The argentiferous brine flowing from the lixiviating tubs, after being allowed to deposit the particles that may be held in mechanical suspension, passes into three tubs, each containing a layer of cement copper eight or ten inches deep. The superior attraction of copper for chlorine causes the silver to be precipitated in a reguline condition as *cement silver*, while the former metal is taken into solution in its place, and carried forward into a fourth range of tubs, where, in order that the complete precipitation of the silver may be secured, the brine is brought the second time into contact with finely divided copper. A still lower range of tubs receives the fluid which now holds much copper in solution, and where, by means of metallic iron, the copper is in its turn precipitated in the form of cement copper.

The fluid passes into other vessels containing iron, that it may be completely freed from its copper, and then flows into a reservoir beneath the floor of the apartment, and is finally pumped into the reservoir spoken of in the commencement of the description, to be heated and passed again over the argentiferous powder.

The silver falling in the precipitation tubs is collected every eight or ten days, cleared of particles of copper by passing hydrochloric acid over it and placed in a vat where for a period of twenty or thirty days it is allowed to remain in pure water, which is occasionally renewed. It is then placed in an iron pan upon the top of the furnace and allowed to dry, and finally, it is carried to the refining department, where it is fused and purified.

Not only is the separation of the silver more complete than by the method of liquation formerly in use, but the copper obtained by smelting the lixiviated remainders is found to be much superior to that obtained by the ancient method, since during the complete roasting at the beginning of the process, a greater part of the antimony and arsenic are driven off into the atmosphere.

Rock Springs District--Colorado.

Mining in the Colorado region is in nowise confined to the country adjacent to the river. There is every reason to believe that the entire country between that river and the coast, and indefinitely to the eastward, will be found rich in mines of gold, silver and copper. Wherever prospectors have started in, they appear almost invariably to meet with success. The Rock Spring district, about 50 miles from El Dorado Cañon, on the road thence to Los Angeles, is already beginning to assume considerable importance. So extensive have these mines become that the miners in that neighborhood have found it necessary to divide the district, and a new one has recently been formed from the northerly portion, and named "Macedonia District." Rock Spring District is five miles square, having Silver Hill for its center, while Macedonia Hill has been fixed as the center of the district of that name.

In the latter, work has been actively commenced in the Macedonian lode and the Blus Ophir. The Mammoth Company, in Rock Spring District, are pushing ahead vigorously with their tunnel. This is said to present an immense lode at its outcrop, and is likely to be very valuable. An assay recently made from what is supposed to be a narrow spur, struck in the tunnel, yielded $540 to the ton. The rock from the croppings has assayed at a much higher figure. This tunnel is being driven through very hard granite. The shaft of the Pride of the Union was down about 70 feet at the time our informant passed that way, and the company were taking out some very fine-looking ore. A contract has been given out for sinking a shaft on the Montezuma lode.

The Macedonian cry is heard from these mines, "Come over and help us!" There is room enough for all who come with means to locate and develop the mines. Companies in this city who are sending men there with half means, however, are making a great mistake. There are no placer mines there from which a temporary support can be derived; neither are there any mills as yet for crushing and taking the bullion from the ore.

The developments are already sufficient to warrant the putting up of a small prospecting mill in this neighborhood, say on the road at the Rock Springs Camp, which would be central. Why do not the companies in this city interested in these mines unite in an enterprise of this kind? If such a project should be committed to proper hands it would not only be a paying investment, but demonstrate at once, and at small aggregate cost, the value of the district. A mill put up and run on this plan will save to the miners the extortionate charges of a speculating company, whose aim is too often to ruin the reputation of a mining neighborhood, in order to freeze out the locators and buy up their claims for a song. Assays have already shown that silver exists there in large quantities in "specimens," and the pick and shovel have proven that the lodes are heavy and continuous. We hope soon to be able to record the fact that the machinery has left this city for a mill for Rock Springs. There is plenty of wood in the neighborhood for fuel and timbering, and thousands of acres of the best quality of mountain bunch grass.

Scientific Sacrilege.—It is said that the French Commission, under the direction of M. de Saulay, is rifling the tombs of the prophets and exhuming the remains of venerated Israelites, to enrich the scientific collections at Paris. Many of our Israelitish friends are much aggrieved at this sacrilege, and justly urge that zeal for science should never infringe upon subjects justly held sacred.

Mining Gossip.

EDITED BY.....FRANK WARDDELL.
FOR THE MINING AND SCIENTIFIC PRESS.

You Cannot be too Careful.—Quite an exciting little affair of threshing took place on Montgomery street, last Tuesday morning. It was most skillfully administered, and in the latest approved style, by a well known physician of this city, to a broker in feet, or, in other words, to a "corner ornament" and pretending dealer in feet; (for in our days we have no more idlers.) Ask such an one his business and the answer is invariably that he is a broker—surely not very complimentary to our legitimate dealers in stocks. But to return to our story: It seems from reports that the doctor in question had introduced the "broker," as his friend, to a private party given on the previous evening, and while partaking of the hospitalities of the house, and enjoying himself in the mazy dances, the broker had become rather too familiar, and even went so far as to endeavor to have a secret appointment made with the daughter of the doctor, a beautiful, unpretending miss of some fifteen years of age, to meet him—this unblushing piece of brokerism—at his sleeping apartments on the following day—appointing the time most suitable for his scandalous designs, the hour she left her school. The young lady made no reply, but allowed this low specimen of humanity to think he had secured her as a victim. But, alas! how deceived he was; for upon her return home she acquainted her father with the facts, and the next morning, bright and early, he wended his steps for Montgomery street, and took his position to await the arrival of the broker. In a short time he met and gave him a scientific caning, which he richly deserved, and double the amount would not have been too much. Thus ends our version of this affair in high life, which we will close with the following moral:—Fathers, always look well to the character of those whom you introduce to your families. Look to character first, and wealth afterwards.

Bullion from Esmeralda.—A correspondent furnishes us the following as a correct exhibit of the amount of bullion shipped from Aurora by Wells, Fargo & Co., for the three first months of 1863 and 1864, which foots up a balance in favor of the present year of $276,500:—

	1863.	1864.
January	$12,605	$129,000
February	12,798	118,500
March	15,597	69,100
Total	$41,000	$317,500

Since the 1st of the present month we understand that the Antelope Company have forwarded through the same source $8,000, and the Real del Monte $31,000.

London Quartz M. Co.—This mine, located in Siskiyou county, have on exhibition in this city several splendid specimens of rock. One of the specimens we inspected is said to have assayed at the rate of $5,000 to the ton. This is what we consider a "big thing" if there is only enough of it.

Pride of America—American Flat.—Recent accounts received from this mine state that very good indications have been discovered. The stock has advanced in price. Their shaft is now 160 feet in depth, and they have every requisite to thoroughly work the lead.

Owens River G. & S. M. Co.—This company have purchased the Ida Mill, situated within a short distance of their mine. The mill is first class, twelve stamps, and in perfect working order. They intend to set it to work at once upon their own rock.

Buckeye G. & S. M. Co.—The reports from the superintendent continue to be favorable. The latest letter received states that the deeper they go, the better the quality of the rock becomes, and of a far more silvery appearance than heretofore.

Greenbacks.—A large business has been transacted among the brokers in greenbacks, mostly outside of the boards, during the past week.

Election.—At the annual elcetion, held on the 4th inst., by the stockholders of the East Lyune G. & S. M. Co., the following gentlemen were elected: Trustees, R. Shearer, W. Buchanan, H. J. Somers, J. W. Warrin: President, J. W. Warrin; Secretary, Samuel Smith.

Accident.—Mr. L. F. Mehr was very seriously injured in the new incline of the Real del Monte mine, during the past week, by the explosion of a blast, which went off while he was tamping it.

DeWitt Clinton Mine.—This claim, which is now in dispute with the Justice, is, we learn, a south extension of the Independence claim. Their tunnel is in 180 feet, and they continue to work as hard as ever upon it.

Real del Monte.—A dispatch was received at the company's office on the evening of the 4th, stating that they had shipped from the mine the sum of $31,000 in bullion, and that the indications were very favorable. We learn that the above amount is the proceeds of three weeks' work. Upon this report being made public, the stock took a sudden flight on the following day, and large quantities changed hands at advanced rates.

San Francisco Homestead Association.—The election for officers of this association was held on the evening of the 4th inst., when the following were elected for the ensuing year:—President, N. P. Perine; Secretary, Wm. J. Gunn; Treasurer, A. Himmelman; Directors: N. P. Perine, W. J. Gunn, D. Norcross, Wm. Banks, John Pforr and R. White.

La Providencia M. Co., Arizona.—Mr. Beaver, the superintendent of this mine, states that at the surface of it there appears a vein of antimonial silver and lead ore; and at the depth of eighty feet a beautifully defined vein of "petanchi," such as is found in the majority of the large mines in Mexico, which is from three to four feet in width. This company have contracted to sink their shaft to a further depth of fifty feet, and intend to erect on their own ground sufficient furnaces to reduce their ore. The ore works very easy, and recent assays show a return of $156 in gold and silver.

Still Another Suit.—Mr. P. C. Whitney has commenced a suit in the Fourth District Court against the Caroline Mining Company, Reese River, to compel them to issue one hundred and sixty-three shares of stock to Joseph S. Schuster, who claims to be one of the original locators; also against the Garibaldi Mining Company to compel them to issue to the same party one hundred and ninety shares of stock.

Lady Bayan.—In a letter received here on the 5th inst., the Superintendent of the mine, among other things, states that "the ground in the lower works is becoming softer, requiring to be timbered much sooner than heretofore." He further states that he is now driving a drift southwest from the old works; that this morning (April 2d) the appearances were much better, as a little metal was coming in, and he was sanguine of finding more metal at a greater distance, without having to sink for it. At all events, for the present, the water is too troublesome to sink successfully. The new Board of Trustees, elected on the 4th instant, is composed of H. F. Tescbemacher, John Parrott, G. H. Howes, G. W. Fink, D. Meyers, D. Douglas, F. Collyer.

Prices in Aurora.—The Aurora *Union*, of March 25th, contains the following: "Provisions are abundant, and at reasonable prices. Flour $24 per barrel; potatoes 10 cents per pound; barley one bit; eggs seven bits per dozen; butter five bits per pound; crushed sugar 33⅓ cents, or three pounds for one dollar; beef from one to two bits per pound, according to quality; mutton and pork still higher; milk $1.25 per gallon, and house rent too high to be profitable either to landlord or tenant."

The Alabaster Caves of Washoe.—There are probably but very few persons who are aware of the existence of caves of beautiful alabaster within three or four miles of Virginia City. The *Bulletin* says that among the hills to the west of American Flat there is an extensive limestone formation, worn and crowded into precisely similar shades as the limestone that forms so peculiar a feature in the geology of the counties of Tuolumne Calaveras and Amador in California. But a short distance from this limestone there is a beautiful cave of alabaster, from the roof of which, when first discovered, hung long pendant stalactites, of snowy whiteness and rare beauty which visitors have from time to time carried away. The alabaster in this cave is so soft that it may readily be cut with a jackknife, while much of it is, both in appearance and softness, very much like damped common loaf sugar. Unfortunately, both it and the limestone are wholly unfit for building purposes, as they crumble on exposure to the air, though they are very beautiful in appearance.

Important Mining Suit.—William H. Bremer, says the Virginia *Union*, commenced suit in the District court against the North American Mining Company, for recovery of seven hundred and fourteen shares of its capital stock. Plaintiff avers that the predecessors and owners of the Company were locators of fourteen mining claims of three hundred feet each (making 4,200 feet) in the Gold Hill district; and that he, the plaintiff was owner of seven hundred and fourteen feet in said claims, which he conveyed to the company on condition that stock be issued to him at the rate of one share for each foot. That it was agreed that the assessments; were not to amount to more in the aggregate than $150 per share. That he has offered at different times to pay assessments; that such offers of payment have been rejected and that the corporation (the defendant) has refused to issue the said stock.

A Sandy Foundation.—Our neighbors at Napa City appear to be resting on a rather uncertain foundation, judging from the following paragraph, which we clip from the Napa *Reporter*: "It is not known to non-residents of Napa City, that our brick buildings have no solid foundation. The substratum on which they are built, sinks gradually, with every winter season, until some of them have gotten below the level of the adjoining street. We notice that the foundation of the Court House has been recently searched for, and found in such a decayed condition that it is either necessary to remove the building, the ground rats, or rehabilitate the under work."

The above is a forcible illustration of the foundations of certain mining stocks which have hitherto stood high in our market.

Crocket, Esmeralda.—This stock is beginning again to show signs of improvement; it seems to be more active in the various boards, commanding better rates, etc. This is owing, no doubt, to the fact that the Real del Monte is advancing, which instills more life into the surrounding claims, which were gradually drooping away.

North American—Continues to bear the name of "fancy article;" up one day to a fabulous price, and when the purchasers wake up the next morning the chances are that they may find it away down. If there is any merit in this mine, we are ready and willing to be enlightened. Come, who speaks first?

Colorado Specimens for Europe.—Dr. Worrall is collecting specimens in Colorado (Pike's Peak) for transmission to London and other important cities in Great Britain. He is confident that a large sum of money can be secured in England for the purpose of working those mines, and also a large accession to the corps of miners and scientific men of that region.

Failure.—We have to announce, this week, the suspension of another stock broking firm of this city; the liabilities, we learn, are not very large. The cause of their misfortune is mostly attributable to operations in Real Del Monte. We are really sorry for the gentlemen in question, as they are deserving young men, and have worked hard to be successful.

Abel Stearns, Esq., the great stock man of Los Angeles, has lost some 12,000 head. Another large stock man has lost 5,000 head, and others less numbers, according to the extent of their herds.

A Section of Lilse's bridge over the American near Sacramento, was carried away by the flood of Friday night of last week.

An Act Concerning Assessments upon the Stock of Corporations.

Section 1. The Trustees of any corporation, formed under the general laws of this State, shall have power to levy and collect, for the purpose of paying the proper and legal expenses of such corporation, assessments upon the capital stock thereof, in the manner and form and to the extent hereinafter provided, and not otherwise.

Section 2. No assessment shall exceed five per cent. of the capital stock of the corporation, and none shall be levied while any portion of any previous assessment shall remain unpaid, or uncollected, except in cases where all the powers of the corporation shall have been exercised in accordance with the terms of this act, for the purpose of collecting such previous assessments, and except, also, the collection of a previous assessment against one or more stockholders, restrained by injunction or otherwise; in which case, further assessment may be levied according to this act.

Section 3. No assessment shall be levied except by order of the Board of Trustees, concurred in by a majority of said Board, and entered upon the records of the corporation.

Section 4. Every order levying an assesment shall specify the amount thereof and the time when, the person or persons to whom, and the place or places where, the same is payable. It shall also appoint a day for the advertisement of the delinquent list, which shall not be less than thirty nor more than thirty-five days from the time of the making of such order; and a day for the sale of delinquent stock, which shall not be less than ten nor more than twenty days from the time appointed for the advertisement of the delinquent list.

Section 5. Upon the making of such an order, the Secretary shall cause to be published immediately a notice thereof in the following form:

"[Name in full.] [Location of works.] Notice is hereby given, that at a meeting of the Trustees of said Company, held on the [date] an assessment of [amount] per share was levied upon the capital stock of said Company, payable [when, to whom, and where, particularly]. Any stock upon which said assessment shall remain unpaid on the [day fixed] will be advertised on that day as delinquent and unless payment shall be made before, will be sold on the [day appointed] to pay the delinquent assessment, together with costs of advertising and expenses of the sale. [Signature of Secretary, with particular location of office.]"

Section 6. Said notice shall be published once each week for four successive weeks, in a daily or weekly paper, published in the place designated in the articles of incorporation as the principle place of business of the corporation, and also in some paper published in the County in which the works of the corporation are situated, if a paper be published therein; *provided*, that if the works of the corporation are not situated within some State or Territory of the United States, then publication in a paper of the County shall not be necessary; and *provided, also*, that if there is no paper regularly issued on Saturdays at any place where publication is required to be made, the notice may be published in every issue of the paper which is most frequently issued at such place, for the full period of four weeks; and *provided, also*, that there is no newspaper published at that place designated as the principal place of business of the corporation, then the publication shall be made in the newspaper published nearest thereto; and *provided, also*, that the notice specified in the 5th section of this act may be served by delivering a copy thereof, certified by the Secretary, to each stockholder personally, and in case of such service upon all the stockholders of said corporation, then no notice by publication shall be necessary, and such personal notice shall be deemed complete.

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified for the publication of the notice of sale, the secretary shall, unless otherwise ordered by the Board of Trustees, cause to be published in the same papers in which the notice provided for in section 5 shall have been published, a notice substantially in the following form:

"[Name in full; location of works.] *Notice.*—There is delinquent upon the following described stock, on account of assessment levied on the [date,] [and assessments levied previous thereto, if any,] the several amounts set opposite the names of the respective shareholders, as follows: [Names, number of certificates, number of shares, amount.] And in accordance with law, and an order of the Board of Trustees, made on the [date,] if any such order shall have been made, so many shares of each parcel of said stock as may be necessary will be sold at the particular place, on the [date,] at [the hour,] of said day, to pay said delinquent assessments thereon, together with costs of the advertising and expenses of the sale. [Name of the Secretary with location of office.]"

Section 8. Said last named notice shall state every certificate of stock separately, with the number of shares which it represents, and the amount due thereon, except where certificates may not have been issued to parties entitled thereto, in which case the number of shares, and the amount due thereon, together with the fact that the certificates for such shares have not been issued, shall be stated.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale: when published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

Section 10. By the publication of the said notices, as hereinbefore provided, the corporation shall acquire jurisdiction to sell and convey a full, complete, and absolute title to all of the stock described in the notice of sale upon which any portion of the assessment or costs of advertising shall remain unpaid at the hour appointed for the sale, but shall sell no more stock than is necessary to pay assessments due, and costs of sale.

Section 11. On the day and at the place, and as nearly as may be at the hour appointed in the notice of sale, the Secretary shall, unless otherwise ordered by the Board of Trustees, sell, or caused to be sold at public auction, to the highest bidder for cash, so many shares of each parcel of said described stock as may be necessary to pay the assessment and charges thereon, according to the terms of said notice: *provided*, that if payment be made before the time fixed for sale, the party paying shall only be required to pay the added cost of advertising.

Section 12. The person offering at such sale to pay assessment and costs for the smallest number of shares, or fraction of a share, shall be deemed the highest bidder.

Section 13. The time fixed in any notice published according to the provisions, may be at once extended for a period of not more than ten days, by order of the Board of Trustees, duly made and entered on the records of the corporation; but no order extending the time for the performance of any act specified in any notice shall be effectual, unless notice of such extension or postponement be appended to and published with the notice to which the order relates, before the completion of the regular course of publication thereof.

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the non-performance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

Section 15. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed; provided that such repeal shall not affect proceedings commenced for the collection of assessments heretofore levied, but all such assessments may be collected in accordance with the provisions of the laws then in force.

Section 16. This act shall take effect immediately.

The above bill received the signature of the Governor and became a law of the State of California, on the 4th day of April, 1864.

Bancroft's Handbook and Almanac for 1864.—This book comes to us in an enlarged form, containing much information that is valuable, and answering many questions which suggest themselves at almost every hour of the day. It gives a revised list of Federal, State and Municipal, Civil and Military officers, and a corrected list of post offices and postmasters, together with the date of important events which have transpired upon this Coast and in the Territories. Containing full statistics of the State and Territories, as it does, we do not see how a business man can well get along without it.

"American Flag."—Mr. McCarthy is now fitting up an entirely new office for this journal, on the south side of Clay street, near Sansome, and has announced that the first issue of the *Daily Flag* will appear on the 18th inst. Calvin B. McDonald, one of the most famous writers of our State, will occupy a position on the editorial department.

WASHOE STOCK MARKET.

SALES AT THE VIRGINIA AND GOLD HILL STOCK BOARDS

There was quite a revival of business in the transactions at the Washoe Stock Boards during the last week, and a number of claims have taken a sudden rise. Transactions in Jewett & Sheppard have been quite heavy at a very important advance; opening early in the week at $8 and $10, it rapidly advanced to $55, buyer 30 days, on Friday, closing on Saturday at $40. Considerable business has been done in North American, Pony Express, Richlieu, Pride of America, Miantonomah, etc. We append a report of sales as follows:—

American Basin, 30 shares at $2@$3. Burning Moscow, 91 at 100@111. Buckeye, 163 at 14@15. Arizona, 20 at 12. Baltimore American, 10 at 45. Boise & Reynolds, 10 at 2. Beaver, 20 at 20@29. Banner, 25 at 50c. Burke & McClellan, 20 at 8. Baltic, 156 at 160@180. Blue Ledge, 18½@19½. Cherokee, 10 at 75c. Central American, 60 at 3@5. Chollar, 10 at 300. Crown Point Ravine, 5 at 5½. Combined Effort, 16 at 9@10. Coutrnband, 15 at 3½. Coso, 5 at 3. Desert, 10 at 10. Daney, 100 at 110@150. De Soto, 10 at 40. Deep Red, 30 at 7. Daniel Webster, 20 at 12½. Eastern Crown Point, 20 at 4@4½. Eureka, 32 at 12½@15. Effingham, 40 at 50c. Express, 45 at 22@29. Echo, 20 at 23@25. Frankell, 146 at 4@9. Gentry, 10 at 18. Gould & Curry, 4 at 4,500. Great Eastern, 10 at 50c. G. V. & Napoleon, 40 at 1¼@11¾. Grant, 40 at 25@50c. Gold Canon, 11 at 25. Golden Eagle, 10 at 2.50. Harrold & Argo, 74 at 5@13. Hawkeye Original, 26 at 60@62. Harmon, 2 at 40. Hawkeye, 1 at 110. Irving, 30 at 7.50@8. John A. Logan, 105 at 50c@$1.50. Independent American, 10 at 3.50. Jewett & Shoppard, 1,175 at 7¾@55. Justice, 118 at 120@130. Jenny Lind, 30 at 1.50@2.50. Imperial, G. H., 5 at 175. Kit Carson, 20 at 50c. Independent, 10 at 55 Kossuth, 20 at 4.50@5.50. King Solomon, 411 at 1@2. Knickerbocker, 20 at 22@25. Keystone, No. 2, 20 at 5. Louisville, 30 at 2@2.50. Leon, 16 at 10@12.50. Lady Bryan, 903 at 40@51. Lady Bryan, No. 2, 62 at 1.75@3. Lamotte, 14 at 2.50. Mary Ann, 5 at 35. Miantonomah, 145 at 6 to 22. North Potosi, 40 at 30@34. North American, 444 at 128@175. New Oregon, 76 at 10@12. Naargansett, 206 at 2.75@5.60. Nevada, 135 at 125@740. Napoleon, 410 at 5@12. Northern Light, 23 at 3¼@12. Nightingale, 50 at 20@30. Ophir, 30 at 1,540@1,560. Oneida, 15 at 10. Overman, 5 at 215. Original Croesus, 300 at 3@4. Osceola, 20 at 5. Pony Express, 180 at 3¾@7. Pioneer Commereial, 50 at 2@2.50. Pontiac, 20 at 75c. @$1. Pride of the West, 33 at 82.50@83. Paris, 10 at 5. Pone de Leon, 4 at 2. Pride of America, 135 at 4.50@8. Princess, 5 at 10. Russian, 25 at 4. Richlieu, 440 at 5@9. Randolph, 80 at 6@9. Real del Monte, 195 at 39@40.50. Rock Island, 113 at 17@28. Rising Sun, 10 at 1@4. Sunrise, 10 at 5. South Overman, 70 at 25@33. Sacramento & Meredith, 28 at 45@50. Savage, 3 at 2,600@2,615. Seneca, 25 at 25. Pontiac, 59 at 12@15.50. United American, 11 at 9. Utah, 30 at 18. White Dove Consolidated, 210 at 1@2¼. White & Saunders, 200 at 2.50@3.50. William Penn, 46 at 8.50@15. White & Murphy, 150 at 2.50. Wide West, 5 at 19. Wabash, 100 at 5. Yankee Blade, 35 at 50cts.

Steamer Launch.—Capt. Kidd's beautiful steamer, designed to run as an opposition boat between this city and Sacramento, was successfully launched on Tuesday last. She has been christened "Washoe," in compliment of our neighbors of silver land. Her boilers were built within her, and she was finished complete, upon the stocks, with the exception of a few extra touches and painting, which will be applied to her at the old ferry wharf at Oakland, where she will be out of the way of the dust and dirt of the San Francisco side of the bay. She will commence her regular trips in a few days, under the personal command of Capt. Kidd himself.

To Correspondents.—"A. M.," from Washington District, Reese River; a second letter from "X;" and "The Reese River Mines, No. 1," by "A," will appear in our next issue.

A fine specimen of a whale, forty feet long, in good order, drifted on the beach about a mile and a half south of the Cliff House, during the storm on Friday night, of last week.

Mechanical Department.

[Written for the Mining and Scientific Press.]

The Economy of Fuel and Heat.

Messrs. Editors :—As bearing upon the economy of fuel and heat I would request the publication of the following extract from the New York *Tribune* of March 1st :

Will Water Burn?—We mean can it be so burned as to economise and replace other fuel? The discredit thrown on the affirmative of this question by Paine's abortive quackeries at Worcester, some years since, have not discouraged further researches and experiments, which in one case—we know not but in others—already promise the most important and beneficial results. William E. Hagan, an educated and practical chemist, of Troy, N. Y., has for some years been at work on the problem ; and his success is embodied in a new process which may be seen in operation in an ordinary parlor stove in the rear of the Market Bank, No. 82 Nassau street, and in a furnace stove at No. 494 Broadway. The water, contained in a boiler on the top of the stove or furnace, may be supplied daily as it usually is to a boiler placed there to maintain a proper humidity in the atmosphere, or by a feed-pipe from a main or reservoir wherever (as in this city) a supply may thus be had. An ordinary stove will consume from three to four gallons per day ; and this is conveyed, through a pipe on the inner surface of the stove, but avoiding direct contact with the coal or other fuel, till it is emitted, in the form of superheated steam, at the bottom of the fire, where it is decomposed by the contact into hydrogen and carbonic acid gas, which instantly combine afresh, producing carbonic oxide, which undergoes a still further combination or combustion on being presented to the air, with a large development of caloric or heat at each successive stage or combination. Hagan, of course, does not pretend to dispense with carbon or fuel by his invention, but to economise its use to the last degree. In other words, instead of allowing half the carbon to escape in the form of carbonic acid, he consumes it entirely, leaving nothing to escape as smoke but water, and perhaps a little ammonia. He thus reduces the consumption of carbon or coal one-half, while maintaining a more temperate and equable combustion with a steadier and more healthful heat. The atmosphere of apartments or houses heated by his stoves or furnaces is more bland and Summer-like than any other process of combustion can supply. And, as the process is by no means expensive—adding perhaps one-third to the cost of a stove, and one-tenth to that of a furnace—we predict for his invention a rapid and general adoption."

Heat is evoked in all processes of mechanical and chemical condensation and absorbed by expanding matter, hence it may be inferred that heat is a condition of the molecular closeness, or of the volume of bodies. There is nothing to lead us to believe that any of the gasses fail to emit heat when chemically combined in a condensed form, and in all ordinary processes of combustion one or more gasses are brought in play. One volume of oxygen uniting with two of hydrogen to form water, gives out half the amount of heat that two volumes of oxygen do in uniting with one of carbon to form carbonic acid, and a quantity of heat equal to the latter result is due to the union of half the amount of oxygen with iron. In these cases the products are respectfully a vapor, a gas, and a solid. There is some yet unrevealed connection between the volumes and specific gravities as well as specific heats of combustibles and their so termed supporters. In the union of carbon and oxygen and hydrogen and oxygen, the compound volumes are reduced one third. When carbon or hydrogen extracts oxygen directly from the atmosphere one half the heat given out is carried off mostly in a latent condition by the nitrogen. If while the oxygen is being condensed another agent equally condenses the nitrogen by forming with it a second compound, it will be apparent that the loss of heat may be obviated to a certain degree. This principle would appear to partially enter into the theory of the above invention. A large amount of heat is absorbed by water in forming vapor, which coming in contact with heated carbon decomposes into its constituents, oxygen and hydrogen. Two equivalents of the oxygen unite with one of carbon to form carbonic oxide, which in its further passage through the fire takes up another equivalent of oxygen from the atmosphere to form a double amount of carbonic acid. The hydrogen is supposed to unite with carbon, to form carburetted hydrogen which by contact with air is likely to unite the carbon with oxygen and the hydrogen with nitrogen and oxygen, the products being carbonic acid, ammonia and water, which latter two if mutually mingled condense with considerable heat.

This I assume to be the "educated and practical chemists'" theory of his invention; although the writer of the notice which I have clipped from the *N. Y. Tribune*, claims an absolute impossibility—the conversion of carbon into nothing, or the mere effect of something—heat.

Now it must be apparent that the amount of heat required to convert water vapor into oxygen and hydrogen, is exactly equal to that given out when the same amount of oxygen unites with carbon. The idea of the invention, however, is not new, and when the compound series of results operate under favorable circumstance there can be a saving of the waste radiated heat by its application to the water. But in case of a stove where radiation is seldom a loss of heat, the effect will be equal to dashing the water directly upon the fire. The hydrogen under favorable guidance is capable of setting free its own and a probable portion of the heat of nitrogen; but the amount of nitrogen remaining uncombined can scarcely be less than in the common process of combustion, of which the round-a-bout mode would seem to be but a repetition. It will be remembered that very volatile gases are brought into action, such as might escape unnoticed, and carry off a large quantity of latent heat, and which require a perfection of arrangement to bring about fair chemical results, particularly with regard to the amounts of vapor and air and degrees of heat.

In the last number of the Press, I noticed an article describing the application of superheated steam to the production of greater heat in furnaces. In this instead of stealing calorie from the fire to convert water into superheated steam, the proposition is to use waste heat, or that applied away from the furnace. By reason of concentrating heat in the area of the furnace, and thereby ensuring more complete combustion of carbon and the gasses, this invention may possess much merit. The other if rightly described is but a cool imposition, because it is scarcely possible for it to gain any more heat than it expends.

E. A. M.

Copying from Chinese.—The Parisian scientific world has proposed to translate the Chinese works on gardening for the benefit of the French horticulturists. The Chinese are certainly great proficients in horticulture. Probably no other gardeners can produce so great a quantity of vegetables from a given amount of ground as the Chinese. They are also remarkable for producing early vegetables. In dwarfing, and many other kinds of fancy horticulture, the Chinese and Japanese excel the world. There are, no doubt, many mechanical ideas, also, which might be profitably borrowed from these Orientals. They have a method of *soldering cast iron*, which, we believe is unknown, or, at least, not generally known among our mechanics. A Chinese traveling tinker will mend a hole or solder up a crack in a cast iron kettle as readily as the Yankee tinner will remedy the damage in a tin kettle.

The Iron-clad Milwaukie, recently launched at St. Louis, has two revolving turrets, mounting two 11-inch Dahlgren guns each. The chief peculiarity of this vessel is, that her immense guns are so mounted as to require less manual labor in working them than is usually employed in working an ordinary field gun. The guns are moved entirely by steam, and are loaded in the hold of the vessel, and raised on a column of steam to be fired. They are run out by steam and recoil against steam, one man being all that is needed to work the guns, with the exception of loading them.

"An Enquirer" Once More.

Messrs. Editors :—The last three lines of "E. A. M.'s" communication, March 22d, in your last issue, were to the point; but I am unable to understand what he means by his reference to the specific heat of water and air in his supplementary letter of the 29th, unless the printer has been making nonsense of his figures; for assuredly "E. A. M." cannot have committed such a blunder. [Our Sacramento correspondent, in his haste of writing, has evidently transposed "water" for "air;" by re-transposing these words, "An Enquirer" may be somewhat aided in his understanding.—Ed. Press.] Why does he not give the names of "certain scientific experimenters in England," so that they may be consulted by his readers, as well as himself. "Certain scientific experimenters" is quite as indefinite as the "oldest inhabitant," "a respectable gentleman," or an "intelligent contraband." "E. A. M." should moreover endeavor to keep cool, notwithstanding he may be discussing a warm subject; and remember that "he who throws rosewater at his friends perfumes his own hands most."

And now for a few questions suggested by "E. A. M.'s" two last communications, to which I do sincerely desire answers; for I have gained "one idea" already, and I am desirous to secure another. "E. A. M." says: "Experimentally, it has been ably demonstrated that no alteration in form of surface, by corrugation for instance, of the same thickness of plates and capacity in boilers, makes any difference in the condition of heat from the same fire." And again: "Steel is not a better conductor than iron, but the allowance of a *diminished* quantity of material for the same pressure of steam gives it a decided advantage in the rapid conduction of heat to the water."

Now let us put this *theory* into *practice*, and see what will be the *result;* and to do so let us endeavor to improve upon the tubular boiler by so altering it as to make it conform to these rules. First, as "no alteration in form of surface makes any difference in the condition of heat from the same fire," let us remove the tubes from the boiler. This change will enable us to reduce the diameter of the boiler without reducing its capacity. Now, by reducing the diameter, we are enabled to reduce the thickness of the boiler-plate, without impairing the capacity of the boiler to stand a given pressure of steam.

And again, in order that we may use *still thinner* boiler-plate, without reducing the capacity or strength of the boiler, and as the "shape of the boiler makes no difference with the heating qualities," let us construct our boiler in such a form as will afford the greatest strength and largest capacity with the smallest amount of material. Is not that evidently spherical? And is not that form, in practice, evidently the *worst* of all possible forms for a steam boiler?

The next two sentences commencing with "A gain of nearly thirty per cent.," etc., and "Any individual hopeful," etc., I can make nothing of. They don't begin to equal "moonshine" for "giving *me* an idea." But, further on, "E. A. M." says "full forty per cent. of fuel escapes combustion." Just so. Now is there not a bare chance for some improvement in furnaces that will save a portion of that "forty per cent." of waste? And is not that just where the argument started, by "E. A. M.," scouting the idea that an engineer in the Gould & Curry mill at Washoe had made any improvement on "the present perfected system of building furnaces and boiler flues?" Better stick to your text, my friend, or "throw up the sponge."

But again, has not "E. A. M." caught himself in a very bad trap on the electro-magnetic machine? Read what he now says on that subject, and compare it with what he said in his first communication in reference to the reported New York invention, which proposes to furnish electro-magnetic power at such rates and in quantities sufficient for practical results—the main principle of the invention being "a more extended or free condition of action," "E. A. M.'s" very words in his present communication, and to which he adds, "as has been experimentally proven."

An Enquirer.

Metallic Belts for Pulleys.—Mr. Thos. Luders, of Paris, proposes the use of steel bands as a substitute for leather for driving machinery. The metallic bands are to run upon wooden or iron pulleys, covered with two or three folds of leather. The ends are either braced or laced together with leathern thongs, the holes being in the latter case bushed with soft metal.

Patent Department.

Something New and Important in Gas Lighting —*A California Invention.*—Mr. D. B. James, of this city, has invented a new and portable apparatus for manufacturing gas, which promises to do much toward doing away with the monopolies of large gas companies. By the use of this apparatus, which may be placed in the position of the ordinary meter, occupying only the same space, and costing less than is required on deposit for the same; the consumer may manufacture his own gas, and that too at an expense not exceeding one-half the cost now charged in this city. Mr. James has given his invention a thorough, practical trial, and demonstrated that he can produce a light fully equal in every essential particular, and brighter and whiter than that derived from the ordinary gas. The practicability of the thing is beyond a question. This apparatus can be readily connected with any pipes now in use. Application for a patent has been made through the Mining and Scientific Press Patent Agency. Their manufacture will be commenced immediately in this city. The material used in the manufacture of this gas is a non-explosive fluid.

Drying Coal by Centrifugal Force.—A patent has been granted to Mr. Prosper Hanres, engineer, Belgium, for improved machinery for drying coal. It consists of a central shaft, mounted in a socket in such a manner as to allow of a sufficiently rapid motion being imparted to it to throw off by the effect of centrifugal force the water contained in the coal On this shaft is fixed a circular ring or crown, to which is attached a frame covered with a wire-cloth or perforated sheet metal the holes being of such a diameter that the water will escape while the coal will be retained. A hollow shaft, concentric with the first, turns rapidly in the same direction, but with a different velocity, serving as the axis to a spiral screw of which the exterior diameter is equal to that of the interior of the perforated cylinder. By the action of this screw the coal, which is being continually fed to the apparatus by a hopper, will fall on to the top thread of the screw, which is slightly curved upwards or flagged in order to collect or throw over the matters more quickly. By the rapid rotation of the screw the coal is thrown against the sides of the drum down which it falls, deprived of its moisture, into the reservoir arranged to receive it. The rotation of the drum and of the screw can be so adjusted as to insure the coal being retained in the apparatus until it is perfectly dry.

Should the dry crushing of quartz ever come into general practice, as most likely it will, the principle here described may become valuable for such a purposo.

Dressing Ores by a Current of Air.—A patent has been granted to Mr. William Clark, on a communication from M. L. P. Langlois, of Paris, for improvements in separating ores from their gangues. The novelty of the system proposed consists in applying a current of air instead of water for this purpose. The apparatus is formed of a hopper, which conveys the pulverized ores into a current of air produced by one or more blowing machines; which current of air, while it throws the lighter and poorer particles a considerable distance, only throws the richest and heaviest ores, that is those containing the greatest quantity of metal, the least distance, thus effecting the classification of the whole, according to their density and their collection, in suitable receptacles. If a single blower is insufficient, two or more are employed, placed one above another, whereby the metallic particles, after being partially classified by the action of one blower, pass under the action of a second blower, which completes the classification.

A New Patent Churn Dasher, constructed upon a new and ingenious principle, has recently been brought out by Mr. W. D. Stephenson, of Montreal. It is said that by the use of this instrument butter can be produced from six quarts of pure milk in 20 minutes, and from cream in 10 minutes. The arrangement is very simple. In place of the ordinary churn handle there is a tin tube of the same dimensions, with an air valve at the top. This, by the ordinary perpendicular motion of churning, forces air so fast into the milk as to cause a great commotion, which brings about the result in so short a time. Mr. S. has the approving opinion of several scientific men on his invention, and is confident his improvement must supercede all others.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search, made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will often find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail — The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labells, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15

On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:

Saturday Morning, April 9, 1864.

☞ MINING NOTICES will be found on pages 233, 234, 237 and 240.☜

REPORT YOUR EXPERIMENTS.—How much that is learned by our intelligent and successful miners and mill men, is never communicated. Experiments are constantly going on, often with important results, which would impoverish no one, by being made public, while they might save thousands to the State if they could only be made generally known. We are quite confident that there are many who possess valuable information, acquired from experience, who have no objection to making the same public, and who do indeed, communicate it to their immediate neighbors; but no farther. Here is valuable information. Why not report your experiments through the MINING AND SCIENTIFIC PRESS, the accredited organ of the miners of this State? Tell us how you get certain results, that others also may profit. You have no fears of competition. The material you are producing—gold, silver and copper, are always in demand; there is no danger that the market will be overstocked; they will always sell. It matters not if you communicate in a hurried way, so you only send us facts. We will put the same into readable shape. Report your experiments.

THE GEOLOGICAL SURVEY.—The Legislature, just previous to its adjournment, passed the appropriation for the continuance of the geological survey of the State—or rather for a partial summing up and publication of the work already done. That is better than nothing, as the leading daily papers of the State recommended, and urged in column leaders, as the proper action to be taken in the matter. We understand that Professor Whitney will leave for New York about the first of May, where he will supervise the publication of his report. We trust that the forthcoming publications will prove of sufficient value and interest to evoke a more liberal feeling from both the Legislature and the press, ere another appropriation may be called for. The loss of the present appropriation would have been a burning shame and lasting disgrace upon our State; to say nothing of the breach of faith it would have involved toward the distinguished gentlemen who are engaged in the survey.

IMPORTANT ACT.—Senator Moyle's bill, passed by the last Legislature, for the establishment of agencies for the transfer of shares of the capital stock of mining corporations at different localities.

GLASGOW SCHOOL OF MINES—A WORD FOR HOME CONSIDERATION.—A school was established about four years since, in the important city of Glasgow, Scotland. Its fourth annual examination was held on the 18th of November last, on which occasion the principal stated that although the school had been in operation but four years, no less than 93 students had already been enrolled in its classes, and of these twenty-two were at that time actually engaged as principals or assistant managers of important mines. Some four or five others had been previously engaged in such positions but, had felt the necessity of further instruction in their profession, and had passed through a course at this school. The importance of these schools is fully felt and appreciated in the oldest mining localities of Europe; but in California, where we are but just commencing to mine, it is at least practically assumed that we are in no need of such aids. The acknowledged mismanagement of so many of our mines affords the best commentary upon this assumption. Already we are receiving, in this city, from the local shareholders of many of our mines, earnest entreaties to directors here to send more capable superintendents to manage the works at the mine. Our daily papers are even publishing to the world complaints of this description. Yet our Legislature has just adjourned without even so much as considering the propriety of taking the initiatory steps for establishing such a school. In the meantime, however, some of our citizens, interested in mining matters, and who fully appreciate information in this direction have secured the services of Professor Price, of this city, in the establishment of a mining class, which is now "in the full tide of successful experiment," with nearly thirty members. The chief object of the establishment of this class has been the study and practice of assaying. Let us hope that out of it will grow a legitimate mining school where all the different subjects usually embraced in a thorough mining education may be taught. The regular evenings for this school are Tuesday and Saturday evenings of each week. The laboratory is also open for practice during the day time, for those who cannot make it convenient to attend in the evening.

THE LIBERATION OF IRELAND.—Ireland appears to be in a fair way of liberation from English rule. Statistics show that within the past twenty years while England has increased 25 per cent. Ireland has *decreased* in exactly the same ratio. At this rate another century will pretty effectually work out the liberation of Ireland, without any assistance from the "Fenian Brotherhood," or any other organization, civil or military, other than her self-constituted rulers. The green flag of Ireland will be transplanted to a foreign soil, and interwoven with the stars and stripes of America.

This process of denationalization is certainly one of the most remarkable events of the present age. The cause of this decadence is certainly not attributable to the Irish character. England and English policy is the agent that is rendering it impossible for one of the finest islands on the globe, blessed to profusion with the gifts of nature, to sustain her population. Yes, Ireland will indeed be liberated and the bitterness of hate against the English people, which is now confined to a narrow island, will soon be disseminated throughout the extent of a magnificent continent.

STRIKES.—The "Journeymen Iron Moulders' Protective Union" of San Francisco, struck for higher wages on Saturday last. They formerly received from $3 to $4 per day, and now demand $4 and $4 50, which latter wages the proprietors declare they cannot pay and compete with Eastern manufacturers, and they have accordingly telegraphed East for workmen. On Thursday the boiler-makers, to the number of about fifty, struck for an increase of pay from $4 to $4 50 per day.

DESULPHURIZING.

The experiments in "desulphurizing" the auriferous pyrites at Colorado appear to be creating much interest among the miners of that region. In addition to what we gave last week in relation to these experiments, we now add the following from the Colorado *Mining Journal* of March 12th:—

In a few remarks, on Dr. Keith's Desulphurizer, yesterday, we stated that the gentlemen of the firm were well satisfied as to the success of the principle to which they have devoted so much time, labor, and expense. Their theory is most beautiful, and they have succeeded, in a great degree, in the reduction of it to practice. None deny that the various antagonistic ingredients in the ore must be oxydized in order to save the gold; the question is, whether it can be done, perfectly, in the manner in which they have attempted it. So far, they have not done it perfectly, but as it only requires a greater heat or longer exposure of the ore to its action to effect this essential object, we say and they say, that they are satisfied as to the ultimate thorough realization of their theory.

But another question arises with us. Does not the gold, in this oxydising process, become more or less vaporized? thus passing off through the flue into the atmosphere. Messrs. Crosby and Millett, of the Excelsior Boston Mining Company of South Boulder, have been making experiments with a view to determine this question, which seem to favor the affirmative. Parcels of ore run through their desulphurizer—which perhaps burns more thoroughly than Keith's—when the flue carrying off the fumes led directly into the atmosphere, yielded very little gold; when it was bent down so as to precipitate the fumes and fine dust into a spray of water, they obtained gold in a larger quantity by five times from the same ore. These experiments, if they demonstrate anything, *demonstrate the fact that the gold in ordinary desulphurizing becomes vaporized and is carried off by the heavy draft into the atmosphere.* We are aware that the Messrs. Keith & Co., reject this idea, almost entirely, but it seems to us there is something in it, worthy of notice, nevertheless. Our object in adverting to it is to call the attention of experimenters to what has already been proven, that they may not lose time traveling over the same ground.

THE HOWELL CRUSHER.

Our Colorado neighbors are also still persistent in their efforts to render the Howell Crusher more available for reducing the quartz than the ordinary stamps. The *Journal* of the same date as above remarks on this machine:—The Howell Crusher has, after numerous experiments as to the best material for shoes and the most profitable rate of speed, been rendered available at least. Soft wrought iron, both for the corrugated rims and shoes, has been found to be the best material, while a reduction of speed from 2,500 to 1,500 revolutions per minute, not only performs the work better, but precludes the liability to accident from flaws in the iron, or rapid wearing in places. The gentlemen of the firm are satisfied with the general result of their operations, and while they are unabled to do themselves justice from the absence of the required machinery, are constantly perfecting their process, and learning what will be absolutely indispensable when they come to set it up. Their progress with the Howell Crusher alone has been in the highest degree satisfactory.

It will be observed from the above that the experiments alluded to have simply rendered this machine "available," from which we would infer that it cannot be considered a "success." The reason of this undoubtedly is that "speed," the principle on which its employment is based, has been sacrificed to faulty construction. No one who understands the working of the machine can question its complete success if it can be constructed so as to be driven up to 2,500 revolutions per minute, and especially when it has been rendered "available" at the reduced speed of 1,500. Good mechanics have no hesitation in pronouncing it safe to drive the one recently constructed at the Pacific Iron Works, in this city, at 2,500. It will soon be subjected to that test, and we shall be able to pronounce upon its results. We have much confidence, but not, as yet, implicit faith in this crusher.

The *Journal* says that those who are impatiently waiting on the results of operations in this process, may rest assured that they are not wasting time, and adds, "The Keith Process will undoubtedly justify all the expectations of its friends, if it does not greatly disappoint them for the better."

MINING SHARE MARKET.

The past has been a week of comparative quiet; the only feature of special interest has been the fluctuations in the Real del Monte. The amount of sales foot up at $1,341,982.

Ophir has declined, with increased transactions. In consequence of unusually heavy expenses, the directors have been obliged to suspend the dividend for March. The closing quotations are $1580@1590.

Gould & Curry is quiet at $4,500. A dividend of $125 per foot was paid on Tuesday last. The receipt of bullion for March was $549.000. The improvements which have been in progress for some time at the company's mill, are nearly completed.

Savage is quiet; we note sales of but 17 feet, at $2,580@2,610. A dividend of $50 per foot was payable on Tuesday last.

Challar may be quoted at $320, with light request.

Burning M scow is quiet at from $96@98.

Uncle Sam has materially improved and may be quoted at from $1,000@1,050.

Lady Bryan is not so much in request, although large transactions are reported—2,549 shares at from $45@54. The latest intelligence from the mine will be found noted elsewhere.

Yellow Jacket has found a buyer at $1,230, buyer 30; Justice at 140; Potosi 1,100, a material advance; Baltic has been heard from at 147, and Melones at 45.

North American still continues an important feature in the market; 2,600 shares have changed hands, mostly at a decline from last week's figures. The closing sales were $139.

We quote Daney at 104; Baltic 145; Nevada (J. G.) 150; Baltimore American 42; Imperial, 180; Pride of the West 93; Buckeye 15; Blue Ledge 22.50@25; Rock Island has advanced from 15 to 25.

Adriatic is in light request at 9; Burnside at 12; Central America 12; Lafayette 10; Bullion at 69. Michigan at 35@37; Caledonia Tunnel at 25; Jewett & Sheppard at 15—with a large run and important advance in Washoe; Original Hawkeye at 75; Crockett closed with considerable demand at 8@12.

Real del Monte has again become a leading feature of the market; 3,338 shares have changed hands since our last issue. Opening the week at from $36 @ 40, telegraphic dispatches announcing a large shipment of bullion, in addition to an important improvement in the new workings at the mine, were received on Tuesday, in consequence of which the stock advanced rapidly, till it reached $130, on Wednesday, with large sales at intermediate rates. It declined to $93 on Thursday, and closed at yesterday's board at $78, with a downward tendency.

Wide West has also been sympathetically affected, and has been largely called for during the last two days—459 shares having changed hands in that time.

Silver Hill has been heard from at $5; Josephine (Coso) at $2; and Coso at $3.

De Soto may be quoted at $36; Ben Franklin at $4; Baltic (H.) at 2.50; Washington, R. R., has sold at $10; Rough and Ready (Amador) at $70@75, and Kentucky, (copper) at $6.

SHAFTER'S MINING ADVERTISING BILL, which is now law, is given in another column. We have earnestly opposed the bill, believing it to be imperfect and liable to create confusion and dissatisfaction, if not litigation; yet as it is upon us for the next two years, we shall be gratified if our fears prove groundless. The papers of Nevada Territory are positive in denouncing the brief time allowed for advertising the delinquency of shareholders. The dailies of this city singularly harmonize in silence in regard to their opinions of the law. A working test will soon show the true color of the bill.

GREAT numbers of cattle have died from eating poisonous weeds; feed being scarce

NOVA SCOTIA GOLD MINES.—We have received a pamphlet of 56 pages, being a "Report of the Gold Property of the New York and Nova Scotia Gold Mining Company, with an introduction on the general structure and geology of the Nova Scotia Gold Mines, by BENJAMIN SILLIMAN, Jr.," of Yale college. The pamphlet contains much information of value and interest to the general reader, as aside from its particular object it also comprises a general treatise on gold mining in that part of the British dominions. We shall make extracts from it next week.

We would remark, in this connection, that the Professor will arrive in this city on the next, or subsequent steamer. He will probably make an extended tour of the mines of California and the adjacent Territory.

Ida Gold and Silver Mining Company, Russ District, Tulare county, California.—Notice is hereby given, that on SATURDAY, May 14th, 1864, at noon, there will be sold, at Auction, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, a sufficient number of shares in the capital stock of the Ida Gold and Silver Mining Company, standing in the names of the following persons, to pay the Assessment (No. 6) of one dollar per share, levied December 2, 1863, and the Assessment (No. 7) of two dollars per share, levied March 2, 1864, together with the expenses of advertising and sale, unless the same shall have been previously paid—viz:

POWDER.—The ship Hare has recently arrived from New York with 90 tons of blasting powder,

Record of New Incorporations.

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Quibrula Honda G. & S. M. Co., Culiacon district, Sinaloa, Mexico; W. A. Caldwell, A. R. Barrington, G. W. Newmun.
Guadalupe de Yautunas G. & S. M. Co., Durango, Mexico; E. Gould, Thos. Doyle, J. R. Brett, C. B. Stover, R. W. Van Syckle.
Sawtelle G. & S. M. Co., Lander county, N. T.; Ed. H. Doty, Geo. Patch, James S. Kennedy, H. S. Romans, C. E. Abbott.
Sears G. & S. M. Co.; same as above.
Houton G. & S. M. Co.; same as above.
Mammoth Lodge Zilli G. & S. M. Co.; Lander county, N. T.; Jos. S. Friedman, C. Spencer, Joseph Warren, H. W. Bradley, John A. Reichert.
Mammoth Ledge Ashland M. Co.; same as above.
Pine Leaf G. & S. M. Co., Mono county, Cal.; B. M. Barker, N. G. French, N. B. Terwilleger, J. S. Knapp, H. Cailff.

NEVADA TERRITORY.

We gather from the Territorial papers the following names of mining companies which have recently filed papers of Incorporation in Nevada Territory:—

Fire King M. Co., Gold Hill district; T. Guerlin, A. Quinlan, A. Carre.
Peruvian G. & S. M. Co., Virginia district; Thomas McCluskey, S. G. Martin, M. McCluskey.
Hoover G. & S. M. Co., Washita district; Jacob A. Hoover, T. D. Edwards, Samuel Tipley.
New Mountain G. & S. M. Co., Blue Sulphur Springs district; B. Helm, Nicholas Meyer, Caspar Buob.
Winnemuc G. & S. M. Co.; Samuel B. Pierce, R. B. Doom, W. E. Hitchcock, J. A. Heslip, J. F. Burgin.
Washington G. & S. M. Co., Forlorn Hope lode; James Lassiter, E. W. Kiplinger, J. Gould.
Star Tunneling Co.; J. A. Blossom, Alonzo Fogg, I. Miller.
Sierra Tunneling Co.; L. D. Pettit, A. B. Peach, L. D. Wilber.
Illinois G. & S. M. Co., Red Mountain district; T. J. Richoy, Elijah Bartlett, Jeremiah Wilcox.

Cloverdale Mining Company, Sonoma County, California—Office, 430 Montgomery street, San Francisco.—Notice is hereby given, that in accordance with the laws of the State of California, the by-laws of the Company, and an order duly made by the Board of Trustees of the Cloverdale Mining Company, on the 31st of March, 1864, there will be sold at Public Auction, to the highest bidder for cash, in United States gold coin, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, on WEDNESDAY, the 4th day of May, 1864, at 11 o'clock A. M., so many shares of the capital stock of said company, standing in the names of the following persons, as will be necessary for the payment of all delinquent assessments thereon, together with the expense of advertising and sale, unless the same are previously paid:

Names.	No. Asst.	No. Cert.	No. Shs.	Am't
T. T. Bradshaw	3	—	40	$10 00
H. Ellis	3	139	10	2 50
H. Ellis	3	140	10	2 50
H. Ellis	3	141	10	2 50
H. Ellis	3	143	10	2 50
J. W. Henderson	3	77	5	1 25
J. J. Haley	3	—	100	25 00
M. Werner	2 and 3		20	5 00
J. H. Whitman	2 and 3		4	2 00
— Mellon	3	144	2	50

15-4t M. WINN, Secretary.

NOTICE.

Notice is hereby given, that, in accordance with the laws of the State of California, and the by-laws of the Revere Gold and Silver Mining Company, there will be sold at Public Auction, at the salesroom of Jerome Rice & Co., 327 Montgomery street, in the city and county of San Francisco, California, on WEDNESDAY, the 27th day of April, 1864, at 11 o'clock A. M. of said day, so many shares of the capital stock of the Company standing in the names of the following persons as will pay the assessments now due, together with cost of advertising and sale.

John W. Clark	41 shares.	$10 25
Henry Bourne	205 "	51 25
Henry Stede	5 "	1 25
Wm. B. Hall	5 "	1 25
C. F. Lincoln	100 "	25 00
Martin Durfee	100 "	25 00
	456 shares.	$114 00

15-4t By order of the Board of Trustees. H. C. KIBBE, Sec'y.

Rock Rose Gold and Silver Mining Company, Gold Hill, N. T.—Office 605 Sacramento street, San Francisco, April 5th, 1864.—Notice is hereby given, that at a meeting of the Board of Trustees of the Rock Rose Gold and Silver Mining Company, held at the office of said Company, this day, there was duly levied an assessment of twenty-five cents on each and every share of the capital stock of said Company, payable immediately, in gold coin, to the Secretary, at the office of the Company, or to R. H. Nason, Superintendent, at the mine. By order of the Board of Trustees.

15-4t S. C. GARDNER, Secretary.

Prima Donna Gold and Silver Mining Company, Devil's Gate District, N. T.—Notice is hereby given, that the Board of Trustees of the Prima Donna Gold and Silver Mining Company, at a meeting held April 2d, 1864, levied an assessment (No. 6) of fifty cents on each and every share of the capital stock of said Company; said assessment payable immediately, in gold coin, to the Secretary, at 620 Washington street, San Francisco, or to FRANKLIN MORGAN, Superintendent, at Silver City, N. T.

15-4t H. D. CONGDON, Secretary.

Revere Gold and Silver Mining Company.—Notice is hereby given, that at a meeting of the Board of Trustees of the Revere Gold and Silver Mining Company, held this 26th day of March, 1864, an assessment of one dollar and fifty cents ($1.50) per share was levied upon each and every share of the capital stock of said Company, to be paid immediately, in United States gold coin, to the Secretary, at his office, northwest corner of Washington and Montgomery streets, in the city and county of San Francisco, California. By order of the Board of Trustees.

15-5t H. C. KIBBE, Secretary.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs Wallace, Allen & Hardynge. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late, Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public.

W. H. TOBEY,
Agent, Government House, San Francisco. 15-1f

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent need apply.

The Whitman Mine, Como district, Washoe, is reputed to come fully up to the anticipations of its friends. The last clean up resulted in 1,068 ounces of bullion, which is looked upon as in the highest degree satisfactory, although the amount of rock crushed is not given. This rock is not taken *out* of the mine, at the usual expense of shafting, tunneling, etc., but is blasted *off* from the huge *croppings*, which tower up like a mountain above the ground level of the claim. A correspondent of the Virginia *Union* says :—"This splendid yield proves beyond a doubt the immense richness of the Whitman mine, and places it side by side at once with the far-famed Comstock. If the surface rock pays so well, how will it pay at the depth of a few hundred feet? In fact, if no better ore is ever discovered than these croppings show, it is a good thing enough, for there is plenty of it standing at the surface of the ground —enough to keep a hundred-stamp mill crushing steadily for a hundred years."

Since the above was in type we have been informed by parties who *ought to know*, that the *Union's* correspondent must have been greatly mistaken in his inferences, at least: and that no large amount of ore has ever been taken from the Whitman mine, which will pay a profit over expenses, unless it be from developments quite recently made and not reported in the Virginia papers. We give both sides of the story for what they are worth. It will be observed, from the above, that 1,068 ounces of bullion are said to have been taken from the crushing; the quantity of ore worked is not given. If 100 tons were crushed, the result is valueless; if but ten, it is highly important. We should be pleased to give full and reliable results if any one will furnish them. The location is a new one, and may be valuable.

Mining Notices.

Savage Mining Company, Zine House District, Nevada County, Cal.—San Francisco, March 26th, 1864.—A Stockholders meeting of the Savage Mining Company will be held at the Office of the Company, 645 Clay street, on Monday May 2nd, 1864, at 9 o'clock A. M. By order of the Board of Trustees.

14-4t M. G. ELMORE, Sec'y. *pro tem.*

Wide West Copper Mining Company, Office 645 Clay street, San Francisco, March 26th, 1864.—Notice is hereby given that an assessment, No. 3, of thirty cents per share was this day levied on each and every share of the Capital Stock of the Wide West Copper Mining Company, payable in U. S. Gold Coin, to the Secretary at the Office of the Company or to J. M. Pike, Superintendent Copperopolis. By order of the Board of Trustees.

14-4t M. G. ELMORE, Sec'y.

Enterprise Copper Mining Company, Placer County, Cal.—Office 615 Clay street, San Francisco.—At a meeting of the Board of Trustees of this Company, held March 12th, 1864, an assessment (No. 12) of 50 cents per share was levied upon each and every share of the capital stock of said Company, payable immediately, in gold coin, to Thos. Levy, Treasurer, at Lincoln, Placer county, or to the Secretary, at the office of the Company. The Board also gives notice that whatever assessments have been paid in on Numbers 7 to 11 inclusive will be credited on Assessment No 12. By order of the Board of Trustees. M. G. ELMORE, Sec'y.

San Francisco, March 12th, 1864. 14-tf

Roderick Gold and Silver Mining Company, Reese River Mining District, N. T.—Notice is hereby given, that at a meeting of the Board of Trustees of the above named Company, held this day (March 31st, 1864,) at the office of the Company, an Assessment of two dollars ($2) per share was levied on each and every share of the capital stock of said Company, payable immediately, in gold coin, at the office of the Secretary, No. 224 Montgomery street, San Francisco, or to Julius Siehel, Corresponding Secretary, at Austin, N. T. WM. T. ATWOOD, Secretary.

San Francisco, March 31, 1864. 14-4t

Index Mining Company (Location, Copper Canon District, Copperopolis, Cal.)—Office, 415 Montgomery street, San Francisco, March 30, 1864.—Notice is hereby given, that at a meeting of the Board of Trustees of the Index Mining Company, held March 23, 1864, an Assessment of fifty cents per share was levied upon the capital stock of the Company, and made due and payable immediately, in U. S. coin, to the Secretary, at the office of the Company. Certificates of stock are now ready for delivery on payment of this assessment.

☞ The first annual meeting of the Stockholders of the Index Mining Company will be held at the office of the Company on SATURDAY EVENING, APRIL 30, 1864, at 8 o'clock, for the adoption of by-laws, election of Trustees for the ensuing year, &c. By order of the Board of Trustees. [14-5t] RICHARD C. ALLEN, Sec'y.

Puritan Gold and Silver Mining Company, Devil's Gate District, N. T.—Notice is hereby given, that the Trustees of the Puritan Gold and Silver Mining Company have this day levied an Assessment (No. 2) of fifty cents on each and every share of the capital stock of said Company, payable immediately, in gold coin, to the Secretary; at the office, No. 620 Washington street, San Francisco, or to H. W. Arnold, at Silver City, N. T.

March 31st, 1864. (14-4t) H. B. CONGDON, Secretary.

Mr. Jarvis Jewett is our duly authorized advertizing agent and collector in this city.

BUSINESS DIRECTORY OF SAN FRANCISCO.—Messrs. Stillwell & Co. are said to be meeting with excellent success with their important undertaking, and the public will soon be furnished with a conveniently arranged book, containing the advertising cards of our leading firms, with a historical sketch of each upon the opposite pages.

SECRETARIES' MEMORANDA.

For Advertising Mining Notices in the Mining and Scientific Press.

Assessments levied by order of the Board of Trustees of Mining Companies will be duly advertised, in strict accordance with the new law, in the MINING AND SCIENTIFIC PRESS by observing the following rules, which we publish for the purpose of assisting Secretaries in expediting their business, and avoiding the possibility of errors in regard to dates:

When the order for an assessment is made on MONDAY, TUESDAY, WEDNESDAY, THURSDAY or SATURDAY of *any week*—

THE NOTICE OF ASSESSMENT may appear on the FIRST Saturday subsequent to the order.

THE DAY FOR THE NOTICE OF SALE to appear may be fixed on the FIFTH Saturday subsequent to the order.

THE DAY OF SALE may be fixed on the SEVENTH Saturday, or any day (except Sunday) from that date to the eighth Friday, subsequent to the order.

Owing to the arbitrary provisions of the new law (the original bill of which deprived the mining public of the benefit of their choice of advertising in weekly journals), no assessment can be made upon any Friday, and the publication for the collection of the same be made weekly in the Saturday issue of any daily or weekly newspaper.

REVISED COPIES of advertisements will be printed gratuitously for Secretaries who desire advertising near the mines.

A GRATUITOUS EDITION will be published, containing all mining notices (after each issue of the same in our regular weekly edition), copies of which will be furnished free to each member of the various stock boards of the city, and Secretaries will be entitled to as many copies as they see fit to personally address to their stockholders.

ADVERTISEMENTS should be handed into the office as early in the week as possible.

TERMS for advertising mining notices, $2.50 per square. Our columns are considerably wider than those of the daily papers, and consequently more words are contained in a square of our matter.

DEWEY & CO., Publishers,
15-tf 56 and 57 Government House, San Francisco.

IMPROVED WATER-WHEEL,

—PATENTED BY—

John Tyler, West Lebanon, N. H.

GIVING THE MAXIMUM POWER WITH THE MINIMUN COST—HAVING THE FOLLOWING AS SOME OF ITS ADVANTAGES OVER OTHERS—GIVING THE BEST PER CENTAGE OF WATER USED, DURABILITY.

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

Pacific Mail Steamship Company.

THE FOLLOWING STEAMSHIPS WILL BE DESPATCHED FROM SAN FRANCISCO IN THE MONTH OF APRIL, 1864.

April, 13—COLDEN CITY.....R. H. Pearson, Commander.
April, 23—ST. LOUIS,.....Wm. H. Hudson, Commander.
From Folsom street Wharf, at nine o'clock A. M., punctually,

FOR PANAMA.

Passengers will be conveyed from Panama to Asphwall by the Panama Railroad Company, and from Asphwall to New York by the Atlantic and Pacific Steamship Company.

A. B. FORBES, Agent P. M. S. Co.,

"CHIPPINGS."

The State of Connecticut has appropriated towards the support of the war, $8,600,500. Add to this her proportion of the public debt and the sum will reach $80,000,000, or one-third of all the taxable property of the State. Nor do these appropriations include the vast appropriations and expenditures by towns and cities of that State.

Holladay has secured the contract for a tri-weekly mail from Salt Lake City to Virginia City, Idaho. It is expected that the coaches will commence running by the first of May. The importance of this enterprise to the new Territory of Idaho can scarcely be estimated in dollars. It will open up an immense wilderness to the energy of the superior white race, and rapidly fill it with a populous community.

The Cabinet of the King of the Sandwich Islands contains an American, an Englishman, a Scotchman, a Frenchman, a Kanaka, and a woman. This is what might be called a mixed Cabinet.

There will be a draft in the several States on the 15th of April, unless the quota from the respective States are filled up by volunteering. Since the appointment of Gen. Grant as Lieutenant-General, the President is determined to give him all he asks, believing it necessary and having confidence in the termination of the war.

The farmers in Mariposa county are complaining of the great number of grasshoppers, and are afraid they will do great damage to the crops.

The county seat of Mono county has been removed to Bridgeport, the archives having been taken there from Aurora last week.

The Marin County Journal learns that an extensive Powder Mill is to be erected immediately on Daniel's Creek, in that County.

The mountain papers state that all the ditches are full of water and that for all practical purposes they have had rain enough for the present.

One of the Pioneer stage coaches lately made the trip from Virginia City to Placerville in 11¼ hours.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. The Mining and Scientific Press Patent Agency has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for

HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not streching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

WHEELER'S

Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

*** These Pans may be seen in daily operation at the Miners, Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges to gether.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, HAVING completed arrangements for its manufacture at the Fulton Foundry, in this city, now offers it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHALER & THAYER'S REDUCTION WORKS,

NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to HUNDERFORD & PRATER, Proprietors.

HEPBURN & PETERSON'S.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

nov8 3m* HEPBURN & PETERSON.

VOLUME VIII. SAN FRANCISCO, SATURDAY, APRIL 16, 1864. NUMBER 16.

Contents:

No. 16—April 16, 1864.—Contains Twenty Pages.—Wagon Road to Southern California; Nova Scotia Gold Fields; Schools of San Francisco; Facts about Gold; Valuable Suggestions; Mechanical Department; Fair of the Mechanics' Institute; Stock Reports; Sales and Bids; Mining Share Market; Washoe Stock Market; A Nickel Mine; Fine Ore; Mining Gossip; Items; Great Improvement in Engraving; Interesting Experiment; Flax; Monster Gun; Ancient Tin Trade of Britain; Washington Mining District; Reese River Mines; Reese River Letters; Sacramento; Patent Department; Incorporations; Improved Steam Valve.

WAGON ROAD TO SOUTHERN CALIFORNIA.

In a recent letter published in the *Sacramento Union*, from the Washington correspondent of that paper, we find the following:

Representative Cole has introduced in the House bills to aid in constructing wagon and mail roads in California, by granting alternate sections of land on each side of the road, at the rate of three square miles of land to one lineal mile of road. The routes proposed are, first, from the head of Santa Clara valley, through the Salinas plains to San Diego; second, from Gilroy, Santa Clara county, to the Owen's River valley via Visalia, Tulare county. The bills have been referred to the Committee on Public Lands, and will probably pass.

We have heard nothing more of this scheme than is related in the above extract, and can therefore scarcely deny the truth of the correspondent's assertion, yet we can hardly credit it. It seems scarcely possible that our representatives at Washington would let such a bill pass.

The first of these roads mentioned, from the head of Santa Clara Valley to San Diego, would be about 400 miles, we think somewhat more, and the mails have been carried over this route, via the Salinas Plain, San Louis Obispo, Santa Barbara, and Los Angeles, ever since the overland mail was changed from the Southern to the Northern route, early in 1861, or about four years, nor have we heard of any serious complaints of the road. Country roads, mostly in good condition, cover the most of this route. The principal streams are crossed by ferries where parties have obtained such franchises, or in many cases by bridges built by the respective counties.

From the head of the Santa Clara Valley to the head of the Salinas, the roads are so good that they would scarcely be improved by any Company who might get the franchises named, unless it be a small distance not exceeding ten miles at most, perhaps not half that, near the San Antonio River; and, indeed, the roads are not particularly bad now, only some of the grades are rather steep. Nearly the whole of the remainder is over plains, with the finest natural roads, with ferries already established on the streams that are too large to ford.

From the head of the Salinas to San Louis Obispo, over the Santa Lucia Mountains, there is already a good road through the Santa Marguerita Pass, we believe built by the county of S. L. Obispo. This is the nearest route and the lowest pass for this chain, at least it is so said by persons acquainted with the country.

Between San Louis and Santa Barbara, the respective counties expended upwards of $50,000 on this road in 1860-1. The latter county, if we recollect aright, expended $40,000 alone, and made the road through the Garrote Pass a good one.

Between Santa Barbara and the San Fernando valley there are not more than fifteen miles at most that are in need of any expensive improvements, and those portions could be made for a very few thousands of dollars at most; and from the San Fernando to Los Angeles the road is good—the only mountainous portion is the Cahuenga pass, which has been used as a wagon road for many years. Between Los Angeles and San Diego the road is mostly good; a comparatively small portion would need much expenditure to make it very good.

We question if any company would expect to expend over $50,000 on the entire distance, and by such a bill they would receive over 1,200 square miles of land, or three-fourths of a million of acres!

Nor is the case much better for the other road, that from Gilroy to Owen's river, via Visalia.

It would cross the Mt. Diablo chain either by the Pacheco Pass or the Panoche Pass. Through the first of these there is a toll road kept in good condition. Through the second a road was constructed to the Panoche valley by the Company owning the New Idria mines, which is now somewhat out of repair; but repairing this, and extending it about five or six miles from the foot of the Panoche valley, it would reach the San Joaquin plain, over which the road would run about eighty miles without any cost to make it.

Whether the company would propose to construct an entirely new road across the Sierra, we have no positive information, but as there is already a tolerably good road through Walker's Pass—the lowest pass available—we would infer not. But as this road would be from 350 to 400 miles, the bill would appropriate from 1,000 to 1,200 square miles of land more.

Should this bill pass, it certainly makes the acquisition of about one and a half millions of acres—and the most of it valley land—quite easy to the lucky companies. We await future developments.

The Gold Mines of Nova Scotia—The report of Professor Silliman upon the Gold Mines of Nova Scotia, to which we alluded in our last issue, is a most carefully prepared paper, containing much valuable information with regard to that new and interesting field of mining enterprise. The Professor gives the geographical extent of the district as about 6,000 square miles of surface; adding, "Not that gold is to be found in all parts of it, but that it is not unreasonable to search for the precious metal anywhere within this region, where the occurrence of quartz veins—the almost sole matrix of gold—is shown by boulders on the surface." He considers it not improbable that the course of the mining region may be still further extended by more careful researches. A large portion of the region is as yet but little better than an unexplored wilderness. The discoveries hitherto made have been mostly near the seashore where the country is open and accessible. The country, generally, presents most striking evidences of a high degree of glacial action. Everywhere throughout the entire district, the eye of the observer is constantly arrested by long lines of boulders, which have been left in trains by the ancient glaciers upon the surfaces of the polished rocks, strongly recalling the moraines of the Swiss glaciers.

A general absence of alluvial soil is everywhere noticed. The bed-rock of the country has been, as it were, scoured off; its loose materials, with any gold which it might have contained, having been buried in the Atlantic Ocean, there being no intervening valley to receive it. That much alluvial gold has thus been carried off with the debris, is beyond a doubt. Mr. Campbell, the provincial geologist, informed Professor Silliman that he had himself found scale gold by washing the sands of Sable Island, a low sand spit 100 miles from the main shore. The sands which form this island came, without doubt, from the main land of Nova Scotia. It follows from the above that no extensive surface diggings can be expected in these mines, although there are doubtless places of considerable extent in the frequent bays and harbors along the coast where auriferous sands exist in remunerative quantity. There are numerous lakes which can be drained, and which the professor thinks may form rich deposits of alluvial gold.

The gold-bearing veins of quartz traverse a very close, compact slate. Of these there are two classes or sets, one of which intersects or cuts across the stratified rocks of the country, while the other is conformable thereto. The former are very irregular in their course, and seldom carry much gold. They are known by the local name of "Bull Veins." The second are the gold-bearing class; are generally very regular; not usually more than six or eight inches in thickness, often but a mere line; although there are two or three which measure from six to eight feet in thickness. The narrow veins, as a general thing, are found to be the richest. The gold veins carry a large proportion of sulphurets. The gold is almost invariably associated with the sulphurets, where it is visible, and most frequently with the mispickel (a species of sulphurets), or arsenical pyrites. The Professor often saw it with zinc blend, and more rarely with galena. The mispickel is frequently found on the foot wall, occurring as bunches oftentimes of many pounds weight and invariably auriferous. At one point (Montague) scarcely a lump of this mispickel can be broken without exposing the precious metal, and detached pieces are not unfrequently held together by golden threads, or little veins. We shall make further extracts and collations from this report, next week.

Hot Weather.—The weather for several days past has been unusually warm, the thermometer ranging, during the middle of the day, from 70 to 80 degrees in the shade. The dog days are upon us before their time.

Northern Sierra rejoices in five feet of snow.

[Written for the Mining and Scientific Press.]

Private Schools in San Francisco.

BY A SPECIAL CONTRIBUTOR.

The progress of education is, if possible, still more remarkable. The College of California, at Oakland, is a thoroughly organized institution of learning, with a comprehensive and liberal "course of study," and an able corps of professors. It has also been established upon a solid pecuniary basis, and promises to become an ornament and honor to the State. The Roman Catholic College, in Santa Clara county, is also spoken of as an institution of a high order of merit; and the same may be said of the Methodist College, in the same county, under the charge of Dr. Bannister.

Female education has received much attention, and it may fairly be doubted whether any of the famous schools in the Atlantic States furnish greater facilities for the thorough education of girls than some of our California seminaries.

The girls' school at Benicia, for many years under the charge of Miss Atkins, has long enjoyed a desirably high reputation. The Roman Catholic schools at San José have been, and continue to be, held in high esteem. The Commercial school at the same place, under the management of Mr. Freeman Gates, though but recently established, has gained a high reputation among the denomination most actively concerned in setting it in operation. At Vacaville, a very large and flourishing school, numbering several hundreds of pupils, and in large and efficient corps of teachers, is in operation. In the two seminaries last referred to, both boys and girls are admitted as pupils—a system which is admitted by many as open to grave objections.

In the city of San Francisco, there are a number of schools of very high grade. The "City College," a boys' school, under the charge of Rev. Dr. Burroughs, as principal, furnishes facilities for a complete academic course. The City Female Seminary, Rev. Russell C. Clark, Principal, commenced some two years since in the basement of Calvary Church, with a small number of pupils. It was mainly under Presbyterian patronage, and its success has been such that it has been removed into a new building, erected for its accommodation, on O'Farrell street, and now numbers over one hundred pupils. The "California Collegiate Institute for Young Ladies," No. 64 Silver street, Mrs. M. B. Swedenstierna Principal, is a very thoroughly organized school. The course of study is quite as comprehensive as in the best schools for girls in the Atlantic States, and perfect system pervades the whole institution. It is organized into three distinct departments—the primary, the preparatory, and the collegiate. Latin is a part of the "regular course," and more attention is paid to mathematics than is usual in female seminaries. The plan adopted at this school does not admit of large classes, and requires an unusual number of teachers in proportion to the number of pupils. It numbers, at present, about eighty boarding and day pupils. A "parish school," under the auspices of the Episcopal Church, has recently been commenced in the basement of Grace Church, on Stockton street. It now numbers some twenty-five or thirty pupils. The school of Mr. and Mrs. Planel, on Stockton street, has been in existence for many years, and is supposed to afford peculiar advantages for the study of French and music. Union College, at the corner of Second and Bryant streets, is a collegiate school for boys, under the charge of Rev. Dr. Huddart. The building is spacious, and admirably arranged for the purposes to which it is devoted, and the school is highly spoken of.

Oakland, eight miles from San Francisco, also boasts of a number of educational institutions. Among these are the College of California, already referred to, the Preparatory School of the Rev. Mr. Brayton, and the Young Ladies' Seminary of Mrs. Blake. The Rev. Mr. Walsworth, a Presbyterian clergyman, is erecting a mammoth female school at the same place, capable of accommodating *a thousand pupils*.

Upon the whole, there seems to be abundant provision for the education of the rising generation; and if parents will *look and judge for themselves*, instead of relying blindly upon careless report or newspaper puffs, they will have no difficulty in providing for the thorough education of their children, without "sending them East."

FACTS ABOUT GOLD.

Gold is generally found in a metalic state, though never pure. It almost invariably contains a certain quantity of silver as an alloy; sometimes copper and iron. Some metallurgists hold that gold occasionally occurs as a sulphuret. It is known to occur in several other mineral combinations. A mineral sometimes known as "graphic gold," occurs in Transylvania, in narrow veins which traverse porphyry. The name is due to the peculiar arrangement of its crystals, which resembles antimony. This is a highly valuable ore of about the following average composition:—Tellurium 60, gold 30, silver 10, equal 100. Precipitated with the above ore is also another mineral known as aurotellurite, of a whitish brass color, composition about as follows:—Tellurium 47, gold 28, silver 11, lead 14, equal 100. A mineral known as "gold amalgam" has also been found in the platinum region of Columbia, South America, composed as follows:—Mercury 57.40, gold 38.40, silver 4.21, equal 100. This metal occurs in small white grains, about the size of a pea, easily crumbling. Native gold occurs in beautiful arborescent shapes, and sometimes in beautiful crystals and filiform shapes. The nuggets and scales of placer gold are always worn and usually flattened into a scale like form. With regard to its native purity, out of 51 assays recorded by Dana, of gold from nearly every portion of the globe, the lowest was 60.08; the highest 98.96. Among the curiosities of gold, F. Alger has described a crystal of gold obtained in this State, octahedral in form, of the extraordinary size of five-sixteenths of an inch. The crystal is cavernous, the faces concave about the center.

Crystals of gold seldom occur in an isolated form; but when found should be carefully preserved as cabinet specimens, for which purpose their value is much greater than their intrinsic worth. We have at this office a beautiful specimen of flat filiform gold, taken out of a quartz mine in Tuolumne county. Quite a quantity (several ounces) was taken from a crevice, intermixed with clay. After the clay was washed away, the gold, under a glass, presented the appearance of a tangled mass of ribbon shaped fibres, continuous in length, and almost as thin as gold leaf.

Next to iron, gold is the most widely diffused metal on the surface of the globe. It occurs in nearly every geological formation. It is nineteen times heavier than water, and is the heaviest of all known metals with the exception of platinum. Previous to the mineral discoveries in California and Australia, the chief part of the gold which found its way into use was derived from the Russian mines, Gold is the first metal spoken of in the Bible. The earliest mention of it is in Genesis ii, 11, where it is alluded to as being found in the land of Havilah, where the Euphrates and Tigris unite. The sacred writer mentions this fact in immediate connection with his description of the Garden of Eden; he moreover says that "the gold of that land is good."

The entire quantity of gold which has been taken out of the earth, to the present time, is set down at nine thousand millions of dollars. The quantity still remaining is estimated at three millions, which welded into a solid mass, might be contained in a cube of eleven feet. We condense the following additional facts from the *Merchants Magazine*:—

The relative value of gold to silver, in the days of the patriarch Abraham, was one to eight; at the period B. C. 1000, it was one to twelve; B. C. 500, it was one to thirteen; at the commencement of the Christian Era, it was one to nine; A. D. 500, it was one to eighteen; A. D. 1100, it was one to eight; A. D. 1400, it was one to eleven; A. D. 1613, it was one to thirteen; A. D. 1700, it was one to fifteen and a half; which latter ratio, with but slight variation, it has maintained to the present day.

Gold was considered bullion in Palestine for a long period after silver had been current as money. The first mention of gold money in the Bible is in David's reign, (B. C. 1056,) when that king is said to have bought the threshing floor of Ornan for six hundred shekels of gold by weight. In the earlier period of Grecian history the quantity of the precious metals increased but slowly, the circulating medium did not increase in proportion with the quantity of bullion. In the days of early Greece, the precious metals existed in great abundance in the Levant. Cabul and Little Thibet (B. C. 500) were abundant in gold. It seems to be a well ascertained fact that it was obtained near the surface; so that countries which formerly yielded the metal in great abundance are now entirely destitute of it. Crœsus (B. C. 560) coined the golden *stater*, which contained one hundred and thirty-three grains of pure metal. Darius coined *darics*, containing one hundred and twenty-four grains of pure gold, which were preferred, for several ages, throughout the East for their fineness. Darics are supposed to be mentioned in the latter books of the Old Testament under the name of *drams*. Very few specimens of the *daric* have come down to us; their scarcity may be accounted for by the fact that, after the conquest of Persia, they were melted down, under the type of Alexander. Gold coin was by no means plenty in Greece, until Philip of Macedon had put the mines of Thrace in full operation, about B. C. 360. Gold was also obtained by the Greeks from Asia Minor, India, Arabia, Armenia, Colchis, and Troas. There are only about a dozen Greek gold coins in existence, three of which are in the British Museum, two are *staters*. About B. C. 207, gold coins were first struck at Rome, and denominated *aurei*, four specimens of which are in the institution before alluded to.

A cubic inch of gold is worth at $18.98 per ounce, one hundred and forty-six dollars; a cubic foot, two hundred and fifty-two thousand two hundred and eighty-eight dollars; a cubic yard, six millions eight hundred and eleven thousand seven hundred and seventy-six dollars.

The annual product of gold at various periods has been estimated as follows:—

A. D 14	$800,000
500	200,000
1000	80,000
1492	100,000
1600	2,500,000
1700	6,000,000
1800	15,000,000
1843	31,000,000
1848	46,000,000
1851	139,000,000
1858	250,000,000

The amount of gold in existence at various periods is estimated to be as follows:—

A. D. 14	$427,000,000
500	100,000,000
1000	40,000,000
1492	57,000,000
1600	200,000,000
1700	400,000,000
1800	1,100,000,000
1843	1,750,000,000
1848	1,824,000,000
1851	2,200,000,000
1858	3,000,000,000

Of the latter amount, twenty-five hundred millions is estimated to be in gold coin and bullion, and the remainder in watches, jewelry, plate, etc., etc.

Since 1792, the gold coinage of the United States mint has amounted to five hundred and fifty millions of dollars, of which four hundred and sixty-four millions have been issued since 1850. The gold coinage of the French mint, since 1720, has amounted to sixty-one hundred and forty-three millions of francs, of which thirty-one hundred and thirty-two millions have been issued since 1850. The gold coinage of the British mint since 1603, has amounted to two hundred and fifty-one millions of pounds sterling, of which sixty-one millions have been issued since 1850. The gold coinage of the Russian mint, since 1664, has amounted to four hundred and fifty-three millions of roubles, of which one hundred and eighty millions have been issued since 1850. By experiments made at the United States mint, it has been ascertained that the wear and tear of half-eagles is a tenth of one per cent. per annum. Eagles exhibit less, whilst quarter-eagles and dollar pieces exhibit more.

Gold coins were first issued in England in A. D. 1257, in the shape of a penny. Florins were next coined in 1344, of the value of six shillings. The guinea was first issued in 1663, of Guinea gold. The present sovereign was first issued in 1817.

The fact that the large amount of gold which has been thrown into the monetary circulation of the world, within the last decade, has exercised so little influence upon the money market or prices generally, is at variance with the predictions of financial writers upon both sides of the Atlantic. The increase in

the present production of gold, compared with former periods, is enormous; and it would not be surprising, if, in view of the explorations which are going on in Africa, South America, and countries bordering upon the equator, within the next decade, the product should be a million of dollars *daily*. The price of gold has not diminished, although the supply has increased seven-fold within fifteen years.

An Ancient Tin Trade of Britain.—At a recent entertainment of the Southampton Polytecnic Institution, given at the Royal Victoria Rooms, Colonel Sir Henry James delivered an interesting address on the Ancient Phœnician Tin Trade, of which the following is an abstract: He said it had been a matter of discussion for many thousands of years, since the days of Herodotus, as to the direction in which, and the place from whence, the ancients obtained their supply of tin. In the earliest accounts the Phœnicians were said to have passed through the Pillars of Hercules, or the Straits of Gibralta, in order to search for the tin islands, and it was also stated that the tin came from a place of six days' navigation. A more detailed account was furnished by Diodorus, who, in giving a description of Britain, tells us that it is these people who raise the tin, which they cast into a certain form, and afterwards carry it to an island which has this peculiarity—that it is an island at high water, and, peninsula at low water; then they may embark it, and take it to Gaul, after which they carry it 30 days on horseback to the Mediterranean. As there is no other place but Cornwall where the tin is found, they know that is the spot to which all these observations refer. Translators, however, had erred in describing the form in which the tin was cast as being in the shape of cubes or dice. About 50 years ago a block of tin was dredged up in Falmouth Harbor (a model of which was exhibited,) flat on one side and curved on the other, with a portion cut out at either end, thus forming four points. It had been described as a double canoe, a butcher's tray, and all sorts of descriptions had been given to it: but it was proved that this block of tin was one of the identical blocks cast in the form described. He had no hesitation in saying that St. Michael's Mount answered the description of Diodorus in every possible degree. At high water it was surrounded; at low water there was a roadway across, on which a friend had told him he had driven a coach and four, and to this day the tin obtained from that island was brought across in carts for embarkation. When they came to put the facts together they would find, in the discovery of this block of tin, a wonderful confirmation of the fact that this was the place referred to. Sir Henry referred to other facts, with a view of establishing the descriptions of the ancients, and at the conclusion of his address he was loudly applauded.

Singular Explosion.—The Napa Reporter, of the 2d inst, had a letter from a workman at the artesian well being bored at Calistoga Springs, Napa county, Cal., which gives the following account of a singular submarine explosion: From some cause or other the pumps got out of order, and the workmen poured some cold water down them to see if it would make them work. When the cold water came in contact with the hot it caused an explosion, throwing a stream of hot water several feet in the air—some say forty feet, and others much higher. One or two of the men were slightly scalded.

Discouraging from Idaho.—Chase, a returned Boise miner, is not by any means sanguine about the chances in that inhospitable region. He says the mines in California are much richer than those of Idaho—that in the latter country they occupy a very limited space and are poor at that. It was estimated that 80,000 men in Idaho were out of employment, and everything exorbitantly high. The climate is cold and they have ice there in August. It is nothing uncommon to have four or five feet of snow which lasts through the Winter.—*Aurora Times.*

Washoe Coal for Gas.—The Virginia Gas Company have made a test of some five hundred pounds of coal from El Dorado cañon and found it a very fair article for gas, though that at present obtained contained a rather large per cent. of water—a troublesome per cent. The company say that the coal will answer very well for the manufacture of gas but in order to use it some additional apparatus will be required for expelling the water from the coal before using it. The coal companies offer their coal at $30 per ton.

The Taunton Locomotive Company are building an extensive improvement to their works.

[Re-published by Request.]

An Act Concerning Assessments upon the Stock of Corporations.

Section 1. The Trustees of any corporation, formed under the general laws of this State, shall have power to levy and collect, for the purpose of paying the proper and legal expenses of such corporation, assessments upon the capital stock thereof, in the manner and form and to the extent hereinafter provided, and not otherwise.

Section 2. No assessment shall exceed five per cent. of the capital stock of the corporation, and none shall be levied while any portion of any previous assessment shall remain unpaid, or uncollected, except in cases where all the powers of the corporation shall have been exercised in accordance with the terms of this act, for the purpose of collecting such previous assessments, and except, also, the collection of a previous assessment against one or more stockholders, restrained by injunction or otherwise; in which case, further assessment may be levied according to this act.

Section 3. No assessment shall be levied except by order of the Board of Trustees, concurred in by a majority of said Board, and entered upon the records of the corporation.

Section 4. Every order levying an assesment shall specify the amount thereof and the time when, the person or persons to whom, and the place or places where, the same is payable. It shall also appoint a day for the advertisement of the delinquent list, which shall not be less than thirty nor more than thirty-five days from the time of the making of such order; and a day for the sale of delinquent stock, which shall not be less than ten nor more than twenty days from the time appointed for the advertisement of the delinquent list.

Section 5. Upon the making of such an order, the Secretary shall cause to be published immediately a notice thereof in the following form:

"[Name in full.] [Location of works.] Notice is hereby given, that at a meeting of the Trustees of said Company, held on the [date] an assessment of [amount] per share was levied upon the capital stock of said Company, payable [when, to whom, and where, particularly]. Any stock upon which said assessment shall remain unpaid on the [day fixed] will be advertised on that day as delinquent and unless payment shall be made before, will be sold on the [day appointed] to pay the delinquent assessment, together with costs of advertising and expenses of the sale. [Signature of Secretary, with particular location of office.]"

Section 6. Said notice shall be published once each week for four successive weeks, in a daily or weekly paper, published in the place designated in the articles of incorporation as the principle place of business of the corporation, and also in some paper published in the County in which the works of the corporation are situated, if a paper be published therein; *provided*, that if the works of the corporation are not situated within some State or Territory of the United States, then publication in a paper of the County shall not be necessary; and *provided, also*, that if there is no paper regularly issued on Saturdays at any place where publication is required to be made, the notice may be published in every issue of the paper which is most frequently issued at such place, for the full period of four weeks; and *provided, also*, that there is no newspaper published at that place designated as the principal place of business of the corporation, then the publication shall be made in the newspaper published nearest thereto; and *provided, also*, that the notice specified in the 5th section of this act may be served by delivering a copy thereof, certified by the Secretary, to each stockholder personally, and in case of such service upon all the stockholders of said corporation, then no notice by publication shall be necessary, and such personal notice shall be deemed complete.

Section 7. If any portion of the assessment mentioned in said notice shall remain unpaid on the day specified for the publication of the notice of sale, the secretary shall, unless otherwise ordered by the Board of Trustees, cause to be published in the same papers in which the notice provided for in section 5 shall have been published, a notice substantially in the following form:

"[Name in full; location of works.] *Notice.*—There is delinquent upon the following described stock, on account of assessment levied on the [date,] [and assessments levied previous thereto, if any,] the several amounts set opposite the names of the respective shareholders, as follows: [Names, number of certificates, number of shares, amount.] And in accordance with law, and an order of the Board of Trustees, made on the [date,] if any such order shall have been made, so many shares of each parcel of said stock as may be necessary will be sold at the particular place, on the [date,] at [the hour,] of said day, to pay said delinquent assessments thereon, together with costs of the advertising and expenses of the sale. [Name of the Secretary with location of office.]"

Section 8. Said last named notice shall state every certificate of stock separately, with the number of shares which it represents, and the amount due thereon, except where certificates may not have been issued to parties entitled thereto, in which case the number of shares, and the amount due thereon, together with the fact that the certificates for such shares have not been issued, shall be stated.

Section 9. Said notice, when published in a daily or weekly paper, or in both, shall be published as follows: When published in a daily paper, the same shall be published for a period of ten days, excluding Sundays and holidays, previous to the day of sale: when published in a weekly paper, the same shall be published for two weeks previous to the day of sale, the first publication in the weekly being at least fourteen days prior to the day of sale.

Section 10. By the publication of the said notices, as hereinbefore provided, the corporation shall acquire jurisdiction to sell and convey a full, complete, and absolute title to all of the stock described in the notice of sale upon which any portion of the assessment or costs of advertising shall remain unpaid at the hour appointed for the sale, but shall sell no more stock than is necessary to pay assessments due, and costs of sale.

Section 11. On the day and at the place, and as nearly as may be at the hour appointed in the notice of sale, the Secretary shall, unless otherwise ordered by the Board of Trustees, sell, or caused to be sold at public auction, to the highest bidder for cash, so many shares of each parcel of said described stock as may be necessary to pay the assessment and charges thereon, according to the terms of said notice: *provided*, that if payment be made before the time fixed for sale, the party paying shall only be required to pay the added cost of advertising.

Section 12. The person offering at such sale to pay assessment and costs for the smallest number of shares, or fraction of a share, shall be deemed the highest bidder.

Section 13. The time fixed in any notice published according to the provisions, may be at once extended for a period of not more than ten days, by order of the Board of Trustees, duly made and entered on the records of the corporation; but no order extending the time for the performance of any act specified in any notice shall be effectual, unless notice of such extension or postponement be appended to and published with the notice to which the order relates, before the completion of the regular course of publication thereof.

Section 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices hereinbefore provided for, nor by the non-performance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

Section 15. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed; provided that such repeal shall not affect proceedings commenced for the collection of assessments heretofore levied, but all such assessments may be collected in accordance with the provisions of the laws then in force.

Section 16. This act shall take effect immediately.

The above Act received the signature of the Governor and became a law of the State of California, on the 4th day of April, 1864.

Daney. — The last accounts received from the mine state that the water in the shaft is falling at the rate of from four to five inches per day, and their prospects are looking much better.

It is the "Fulton" Foundry, at Virginia City, at which castings of 6,000 pounds are readily made. The average aggregate weight of eastings made per day is between five and six tons.

Nova Scotia Grindstones are now largely superceded by those obtained in Ohio, which for all the different varieties of grit, either for wet or dry grinding, are pronounced equal, if not superior, to the best English stone.

The Ames Plow Company, with $400,000 capital, has been organized in Boston, to manufacture agricultural implements. O. Ames, President; E. Tasker, Treasurer.

Stock Reports.

Sales of the Week.

[To Friday Evening April 16.]

S. F. Stock and Exchange Board.

SATURDAY, APRIL 9th 1864.

MORNING SESSION—11½ O'CLOCK A. M.

8 shares Gould & Gurry at $4500 per foot.
16 do Gholiar at $315 per foot.
12 do Chollar at 320, per foot.
2 do Uncle Sam at $1000.
20 do Antelope at $150, b 30.
10 do Real del Monte at $71.
10 do Real del Monte at 71½.
10 do Real del Monto at 72.
10 do North Potosi at $47½.
5 do North Potosi at $46.

Legal Tender Notes.

San Francisco, Friday April 8th....59 per cent.

A very useful apparatus is now on exhibition at the patent office, Washington, invented by Mr F. N. Gisborne, the originator of the Atlantic cable, for communicating the signal required in workiog the engines of steamships, or in steering vessels of all sorts, by means of telegraphic wires. The commuuication is instantaneous, and the apparatus is so arranged as to make it trustworthy and certain. The officer on deck has only to move an index upon a dial under his hand to cause a correspondiog movement to appear directly before the eyes of the pilot or engineer, whose attention is insured by the ringing of a bell, as a part of the telegraphic movement. Meanwhile the action of the pilot or engineer, in response to the order, is telegraphed back to the officer by automatic motion, so that all possibility of mistake is avoided. Mr. Gisborne's apparatus has been examined and approved by some of the highest nautical authorities in foreign countries and in our own, and has been actually used in several vessels. He has patents in the principal maritime coautries.

Mining and Scientific Press.—Having missed a few numbers of this excellent paper, we feared it had ceased to exchange; but as it has again resumed its regularity, we are a little easier on the subject. The Mining Press is an almost indispensable companion to the miner and mill man, and when in our peregrinations we find it in the cabin of the one or the office of the other, we look for, and invariably find, a superior intelligence and more satisfactory working than where it is unknown, and its precepts ignored. We would dislike to be deprived of it, either as editors, miners, millers, or mechanics.—*Reese River Reveille.*

Mechanical Department.

FAIR OF THE MECHANICS' INSTITUTE.

At a meeting of the officers of the Mechanics' Institute, of this city, held on Tuesday evening last, active steps were taken for holding an Industrial Fair the coming fall. The Fair will open on the 30th day of August. Suitable buildings will be erected therefor on Union Square, the temporary use of which has been tendered the Association for that purpose, by the Board of Supervisors. Now that definite arrangements have been made for such an exhibition, it is to be hoped that every one will do all that is possible to make the same creditable to the city and State, and a success in every particular.

Five years have nearly elapsed since the holding of the last Fair. Within that time the advance of our city and State in mechanical and manufacturing industry is a marvel even in the history of American progress. It is to be hoped that the proposed exhibition will be essentially Californian in character, and that the citizens of Oregon and the adjacent Territories, whose interests and sympathies are so intimately connected with this State, will unite their efforts with us in this exhibition of our common industry. There is no population in the Union, in proportion to its numbers, which has been more prolific of useful inventions, during the past five years than that upon the Pacific Coast. We trust that every individual who has accomplished anything in this line will see to it that his invention is properly represented at the approaching exhibition. Ample room will be afforded for all, and full particulars of all the steps necessary to be taken to secure the benefit of the same, will be made known in a few days. All information of this character, of whatever nature, will be fully given in the columns of this paper. Senator Porter, of Contra Costa, has been chosen as the especial agent of the Institute to transact business for the Fair, from the present time until its close. The circular of the Secretary will be found in another column.

The Pittsburg Monster Gun.—Much interest seems to be felt in the late successful casting of the 20-inch gun at the Pittsburg foundry. The spherical solid shot designed for this gun will weigh 1,000 lbs. It is said that, if rifled, the gun will carry an elongated shot of nearly a ton weight!

The matter of this extraordinary casting was brought to the attention of the American Polytechnic Association, at its meeting held in New York on the 25th of February. At that meeting much discussion was elicited respecting large castings. One great difficulty attending them heretofore has been the liability of porousness in the casting. This difficulty in the present case was obviated by the cold water which was kept circulating through the core, during the process of casting and chilling. One member remarked that this question of the even quality of large castings was an important one. More importance seems to have been attached to it than was warranted. This fact was enforced by citing an instance of a recent production of a solid piece of cast iron measuring 5 feet diameter by 7 in length. It was not cast in a mould, but accidentally "chilled" in a ladle; it had been poured into the ladle to be used with other meltings, to form a bed plate for a steam ship, but when the men were ready to pour it, it was found to be chilled. It was said that it would not pay to break it up; but the breaking was afterwards accomplished, and on examining the fragments he was surprised to find its texture even and consistent to the center.

Gas from Cotton Seed.—In several of the Southern cities which have lately been captured by the United States forces, cotton seed is the only material used for making gas. The pressed *cake* has long been used for gas-making with excellent results.

Scientific Experiments.—At a late meeting of the Paris Academy of Sciences, M. Perrot described some experiments made for the purpose of ascertaining the best form to be given to the extremity of a lightning conductor. A large metal plate, intended to perform the part of a cloud charged with electricity, was put into communication with the electrical machine until the electrometer marked ten degrees. A metallic rod was then brought nearer and nearer to the plate in a perpendicular position, until a discharge was obtained. Of the three rods thus tried, one was rounded off at the extremity, the second ended in a common point, and the third in a very sharp one. The first caused a discharge at a distance, which was taken for a unit; the second discharged the plate at a distance which was under twelve of these units, and the third discharged it at the distance of twelve units, its action beginning to be felt at a distance thirteentimes greater than that of the common point.

The Virtues of Borax.—The washerwomen of Holland and Belgium, who get up their linen so beautifully white, use refined borax as a washing powder instead of soda, in the proportion of a large handful of borax powder to about ten gallons of boiling water; they save in soap nearly half. All the large washing establishments adopted the same mode. For laces, cambrics, etc., an extra quantity of the powder is used, and for crinolines (required to be made very stiff) a strong solution is necessary. Borax being a semi-neutral salt, it does not in the slightest degree injure the texture of the finest linen; its effect is to soften the hardest water, and, therefore, it should be kept on every toilet table.

The New Bedford Copper Company's mill was in operation 275 days in 1863, during which 2,113 tuns of metals were melted, and about 2,500,000 pounds of yellow metal sheaving, heavy yellow metal plates for Government vessels, and bolts, were turned out, and an increase of 33 per cent. on the production of the preceding year. The cost of manufacturing was about the same as in 1862, the improved facilities and increased skill being countervailed by the enhanced cost of material. Five per cent. of the metals melted are lost—passing off through the chimneys. Most, if not all, this waste will be prevented by a new apparatus, which arrests the flying particles of the molten metal.

Scotch Pig-Iron.—"Figures are independent of sentiment and sympathies." In the spring of 1848, when war broke out in Germany, the stock of pig-iron in Scotland was 100,000 tons, and the furnaces in blast were 100, producing 11,500 tons weekly. The price was then 50s, and it thereafter rapidly fell to 40s. per ton, fluctuating between 36s and 45s. till July, 1852. To-day the stock is upwards of 800,000 tons, with 134 furnaces in blast, making about 24,000 tons weekly. The price is 62s. 6d. per ton, being about 10s. per ton above the average of the last six years.

The Haydenville Brass Works have been established some fifteen years, and now employ 150 hands in manufacturing brass work for plumbers, engine builders and machinists. They have a high reputation for perfection of finish and manufacture. The business of plumbers' supplies has increased so much of late that their Boston agents, Messrs. Dalton & Ingersoll, have given up a large hardware trade, and are now engaged entirely in these specialities.

Mechanics Excluded.—At one time the rich merchants and professional men of Philadelphia proposed to form themselves into a social circle, from which all mechanics were to be excluded. The papers were drawn up for this purpose, and presented to Dr. Franklin for his signature. On examining its contents he remarked that he could not consent to write his name, inasmuch as by excluding mechanics from their circle, they had excluded the Almighty, who was the greatest mechanic of the universe.

The Coal Famine.—In some parts of the Western States coal is lamentably scarce, and prices continue high. This state of affairs it is thought will cause the development of many new mines, and will lead capitalists to remedy the deficiency of transportation which is so sensibly experienced.

Wooden Gas-pipe.—Some of the Eastern gas companies, it is said, are experimenting with wooden gas-pipe, well coated with coal-tar. This is in consequence of the high price of iron pipe. It is thought that the leakage accounts of these companies will be large.

Fair of the Mechanics' Institute of the City of San Francisco.

The Institute has resolved to hold its fourth Industrial Fair. The time set for opening it to the public is Tuesday, the 30th day of August, 1864.

A leading object of the Institute is to foster the mechanical arts, elevate the character of the workmen, and stimulate ingenuity, invention, skill and industry in all their branches, in the hope of exercising a wholesome influence upon the general prosperity of the country. Our Fairs bring together inventors, manufacturers, workmen, and the public—producers and consumers.

They promote personal intercourse and interchange of ideas among them. The exhibition of the products of skill and industry imparts useful knowledge as well as pleasure, excites commendable emulation, and marks the advance of our country in useful productions. The Fair brings to the notice of the consumer new and improved articles for his use. It is the best advertisement for the inventor or producer.

It is the desire of the Institute to make their Fairs to increase in usefulness, instruction, and entertainment to the public. The Directors and other officers will spare no pains for this purpose. They earnestly solicit the co-operation of every inventor, artist, manufacturer, machinist, miner, farmer, horticulturalist, and of producers generally, in California, Oregon, and the adjoining Territories, and invite them to prepare articles for exhibition. There will be room for all, and all will be cordially welcomed.

In due time advertisements will be made by the Institute, giving notice of the proper time for forwarding articles, of the arrangements for receiving them, of the rules and regulations for the government of the Fair, and of the proper channels of communication and correspondence. The Institute hopes and requests that the press generally, of California, Oregon, and the Territories will give circulation to this first notice of the Fair in such manner and with such comments as may appear to the respective editors best calculated to bring the subject to the attention of their readers.

By order of the Executive Committee,

P. B. Dexter, Secretary.

Flax is rapidly coming into large use for manufacturing purposes. Great improvements have recently been made, both in the process of bleaching and in its manufacture. For most purposes it is far superior to cotton; and the ingenuity brought to bear upon its manufacture, in consequence of the existing high price of that material, promises to secure for it a far more important position, in our manufacturing industry, than it has hitherto attained, and a permanent one. Flax is now produced cheaply, white as snow, or colored with the most brilliant hues. Calico is now made of about 50 per cent. of flax; cotton flannel ditto; and a variety of fabrics, which have heretofore been made of cotton, are now manufactured with a large proportion of flax. Flax is even worked, in combination with wool, into a very handsome broadcloth.

At a manufactory in Lockport, N. Y., only five days are required to convert the raw material into a perfectly white manufactured article. This establishment is under the management of an English expert, whose life has been devoted to the business of manufacturing flax. A large portion of the material is obtained from the neighboring farmers at $15 per ton; and the farmers are preparing for a much more extensive crop the coming year.

Eastern Railroad Monopolies.—Some of the railroad companies between New York and Washington hold exclusive privileges—especially the one passing through New Jersey—granted by their respective State Legislatures, when railroading was in its infancy and its future growth and importance not well understood. These monopolies have grown rich and powerfully oppressive. It has been suggested, as a measure for breaking up these monopolies and securing reasonable privileges to the people and the Government, that Congress should assert its constitutional privilege of *constructing a military road* between those two cities. The press is very unanimous in urging such a step. It is to be hoped that the suggestion will be carried out.

Mining Gossip.

EDITED BY.....FRANK WANDRELL.
FOR THE MINING AND SCIENTIFIC PRESS.

DECISION.—In the case between Shipley and Larrimore, wherein an action was brought by the plaintiff to secure the amount of $2,875, being the difference sustained upon an order to purchase and the sale of the said purchase of ten shares of Real del Monte stock; also the commission upon the same, amounting to $50—was decided by the jury returning the following verdict, on the 9th instant: "We find for the plaintiff (Shipley), and assess the damages in the sum of $2,925." This verdict carries costs. The counsel for the defendant applied for a stay of proceedings for twenty days, which was granted. Messrs. Pixley, Smith and Hale appeared for plaintiff, and Messrs. Spencer and Jarboe for defendant.

PERSONAL.—Among the numerous passengers who took their departure for the East, on the steamer Golden City, on the 13th inst., we notice, among others, the names of our much esteemed friends, Mr. and Mrs. Jacob Underhill, Mr. and Mrs. B. Howard, Mr. E. Leonard, Mrs. R. L. Ogden, Mr. and Mrs. James Otis, Miss Macondray, Miss Sather and J. C. L. Wadsworth. We wisht them a pleasant trip, and trust, ere long, to have the agreeable duty of welcoming them among us again.

INLERS.—As San Francisco is so much infested with the following described class of individuals, we are prompted to clip the annexed extract, and publish it for their *especial benefit*:—"There are many people who are too indolent to work themselves, and while they are loafing about and see others who are industrious and at work, will stop and talk to them by the hour, with no other ostensible purpose but to prevent them from working. Such persons have a very limited idea of the value of time; if none to them, it surely has value to others. Such facts should be remembered."

LAWYERS AT LAW.—MR. W. T. WALLACE *vs.* THE QUICKSILVER MINING COMPANY.—The plaintiff in this action has filed a complaint, and summons has been accordingly issued against the defendants. It asks for judgment in the sum of $2,000 for legal services rendered them as attorney and counsel for the said defendants. Mr. Patterson, another attorney, has also commenced proceedings upon the same ground of complaint for the sum of $3,000.

HEAVY LOSS.—It is said that one of the prime causes of the recent heavy failure which took place in this city, during the past week, is attributed principally to reckless speculations in stock. We learn of one single instance wherein the parties lost in a transaction the sum of $75,000. Really this should be a warning to many of our mercantile houses, who are addicted, to a great extent, in this same species of mining gambling. It is quite time that more prudence should be exhibited in stock transactions.

OFF IN HASTE.—Rumor has it that a well known and at one time an extensive operator in "feet," who, for some time past, has been residing at Virginia City, took rather a *hasty departure*, overland, for the East, a few days ago. Some say that in his haste he forgot to settle several very important matters. As the party is well known in the community, we refrain from giving his name until we gain more reliable information.

BULLION RECEIVED.—The Rochester Consolidated G. & S. M. Co. received, on the 9th instant, two hundred ounces of bullion, being the result of seventy pounds of their working ore. This speaks well for the Slate Range District.

DIVIDEND.—The Pride of the West Mining Co. have declared a dividend of $5 per share, which is payable on the 15th of this month.

OWENS RIVER CANAL CO.—It is a matter of much interest to the citizens, miners as well as ranchmen, of the Owens River country that the Owens River Canal Company succeeded, notwithstanding strong opposition, in securing the franchise which they asked of the late Legislature, for the privilege of clearing the upper waters of Owens River, of obstructions, so that logs might be run down that stream from the timber region above. The cost of doing such work will be heavy, and no company could afford to do it without some security for the use of their improvements. That security has now been granted, in the way of a franchise, and we presume the Company will take immediate and active steps to carry out their contemplated work, and proceed energetically with the construction of the canal, erection of a saw mill, etc. The unexpected influx of population into the mines and agricultural portions of that region during the present season, add greatly to the value of proposed improvements contemplated in the prospectus of the company, and ought to produce an important advance in their stock. This company now holds the key to the lumber trade of this beautiful valley, and the first right to water for canal purposes which must soon become of immense value.

PRESENTATION.—Mr. J. C. L. Wadsworth, late Secretary of the Gould & Curry Mining Company, has been presented with a handsome parting gift, consisting of a beautiful silver pitcher and salver, bearing the following inscription: "Presented by the Trustees of the Gould & Curry Silver Mining Company to their late Secretary, J. C. L. Wadsworth. S. F., April 13th, 1864." Mr. Wadsworth, while acting in the capacity of Secretary, rendered to the company many valuable services, and the Trustees thought this time the most appropriate for the presentation, on account of his departure for the East.

IMPROVING.—Mr. W. P. Denckla, President of the Pacific Board of Brokers, has been lying dangerously ill, at his residence, during the past week, with the typhoid fever. We are now happy to state that, at last accounts, he was improving, and we hope to have the pleasure of soon seeing his happy countenance upon our streets again. We feel assured that the members of his Board will give him a hearty welcome back to his old post.

CREDITABLE.—The loyal ladies of Gold Hill, N. T., are taking steps with the view of getting up an extensive festival for the Sanitary Fund. We hope that they will realize a large return for their worthy and very creditable undertaking.

BOISE.—The gold-seekers do not seem to rush off in such an exciting way as they did a few weeks ago for the Boise mines. Keep cool, gentlemen, and think well before you act.

ANOTHER DIVIDEND.—The Maxwell Creek G. and S. M. Company have declared a dividend of $1 per share, which was made payable on the 15th inst.

ANTELOPE MILL.—This mill is now running night and day, and is said to work beautifully. It is considered one of the finest mills in Esmeralda.

NORTH AMERICAN is anything but firmly held by those who pretend to know what is going on. We know of one party who "went out" on the afternoon of the 12th, having sold over 250 shares at figures ranging from $132 to $135 per share.

REAL DEL MONTE.—A telegraphic despatch was received by the company, on the morning of the 13th, stating that they had shipped from the mine $15,000 in bullion. There is no change as to the condition of the mine, and things look favorable.

JOSEPHINE, Coso, is looking much better, in the way of price at all events. A large number of shares having been sold at from $3 to $5.

OWENS RIVER.—The reports from this place are of the most flattering description.

DESIRES TO PAY.—Mr. Hall McAllister brought, suit in the 4th District Court, a few days ago, against J. G. Shirts, Harriet Shirts and Potosi G. and S. Mining Co., to force them to at once interplead in the case, where he is defendant, and J. G. Shirts is plaintiff. (The case we spoke of in our last week's edition.) Mr. McAllister states that some time ago he became the holder of a check on Wells, Fargo & Co., for the sum of $5,000 and two certificates of stock, each ten shares of the capital stock of the Potosi Company, which he was to hand over to Mr. Shirts, upon his acting up to certain obligations, but Shirts failing to do so, thus the Potosi Mining Co. gave him notice, that if he rendered up the said property, that they would hold him personally responsible. McAllister therefore askes the Court to make all of the claimants come forward and interplead, so he can give up the stock and money to whom it correctly belongs.

UNJUST.—In looking over the columns of a weekly cotemporary, published in this city, our attention has been directed to an item as characteristic as unjust. It gives the name of a party, a dealer in stocks, who has had the misfortune to have his name placed upon the Black or Delinquent List of one of our city stock boards. We are all liable to encounter misfortunes—and if such should be our fate we naturally do not desire to have our name and private affairs "paraded" and advertised to the public. Would the paper in question like to have their business affairs made known to the public? We rather think not. Why then are they not sufficiently charitable to do unto others as they would wish to be done by. Nothing like being charitable, if the party be worthy of the same—for we are all liable at any time to get a tumble from the ladder of fortune.

SNOBBY OPINION. — We recently overheard the conversation of a "would be high toned" individual who by chance has accumulated a little more money than his exalted conceit will allow him to possess without its causing him to act the part of a buffoon. He remarked the following to a gentleman in our hearing at the entrance of one of our fashionable hotels. The subject was first upon stocks, then it came upon brokers, when the witty gentleman, lately from the East, remarked in a sarcastic manner "Oh! indeed, my boy! Broker means, no doubt, Broke, Broke, Broke—as much as to imply that no broker, in his opinion could be any thing but a broken down individual. We took a good survey of this large sized piece of pomposity, smiled to ourselves, and went on our way rejoicing that he was no acquaintance of ours.

HOP.—We had the pleasure of "tripping the light fantastic toe" at the Lick House, on the evening of the 11th inst. The social gathering was given in compliment to several ladies and gentlemen who took their departure for the East, on the steamer Golden City. We spent a most pleasant evening, and among the happy throng, we noticed that "feet" were remarkably well represented, embracing those of Gould & Curry, Potosi, Ophir, Imperial, Challar etc. We were quite envious of these lucky possessors of valuable feet, but consoled ourselves with the old adage that "there is a good day coming."

POWDER MANUFACTURING COMPANY.—The articles of incorporation of the Pacific Powder Mill Company were filed with the County Clerk, on the 13th inst. The location of the mill is to be upon Paper Mill creek, in Marin county. Capital stock, $30,000. The Trustees are N. H. Olds, A. H. Meyerpeter and D. B. Goode.

RETURNED.—Mr. J. S. Henning, Superintendent of the North American G. & S. M. Co., has returned to the city again, looking remarkably well, notwithstanding his late reported indisposition. The climate of this place always seems to agree with him. We admire his taste in selecting this city to recuperate.

One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers. ☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

AMERICAN AND FOREIGN PATENTS.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

FAVORABLE TO INVENTORS.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

San Francisco:

Saturday Morning, April 16, 1864.

FOUR PAGES EXTRA.—Being determined not to allow our rapidly increasing advertising favors to encroach upon the amount of space usually occupied by reading matter in our columns, we are obliged to increase the present issue to TWENTY PAGES.

THE COMANCHE.—The work of unloading the sunken Aquilla is nearly completed, and in one week from to-day it is expected that every portion of our iron-clad Comanche will be placed in the ship-yard at the foot of Third street. Four days more will be required to raise her two 15-inch guns, and the balance of the shot and shell yet in the hold of the Aquilla. The sunken ship will be started from her bed on the bottom, by iron straps which will be fastened into her sides—at least the attempt to do so will be made. After she is thus started, chains can be got under her, by which she can be readily raised to the surface. Whether the Aquilla ever floats or not, is a matter of little interest to the public. Her precious cargo is now safe, beyond peradventure, and it is to be hoped that no unnecessary delay will be encountered in setting up and launching the Comanche.

METALLURGICAL WORKS INCORPORATED—REMOVAL. The Metallurgical Works, until recently known as the property of Kustel & Deetken, have passed into the hands of an incorporated company under the name and style of "The Deetken & Company's Metallurgical Works." This company carry on the business of amalgamating, smelting, chlorinating and assaying gold and silver ores on the premises belonging to said corporation, situated on the San Bruno road, in San Francisco county. The capital stock of the company is $30,000, divided into one hundred and fifty shares of $200 each. F. L. A. Pioche, B. Gattell and G. F. Deetken are named as Trustees.

GOOD CHOICE.—John B. Winters, Superintendent of the Whitman mine, Indian Springs District, has been elected President and Superintendent of the Yellow Jacket mine, Gold Hill, N. T. He is a very popular gentleman and a competent Superintendent.

NORTH STAR G. & S. M. Co.—This stock is now commanding good prices, and we have every reason to believe, from what we learn, that this will eventually prove as good a claim as there is in Reese River.

MINING SHARE MARKET.

The Mining Share Market for the past week, has manifested an unusual degree of activity, and has embraced a much wider range than heretofore. Yesterday's was the largest day's business on record of the San Francisco boards. It foots up at $915,888. The total business of the week reaches the very large aggregate of $1,952,534.

Gould & Curry has materially improved with increased business. We quote sales at from $4,521 to $4,575, closing firm at $4,550.

Ophir found buyers on Monday at $1,600 but dropped to $1,540 on Thursday.

Savage opened at $2,650, which figure it maintained until yesterday, when it dropped to $2,550 and $2500.

Uncle Sam has not sustained its closing figure of last week. Sellers were found yesterday at $900.

Daney shares have not been in much request. We quote sales of 248 shares from $100 to $105, closing at the former figure.

Chollar still continues quiet. It met with some improvement at yesterday's board, finding buyers at $350.

Potosi has still farther advanced, having found buyers at $1050.

North Potosi opened at 38½, and gradually advanced, with considerable business to $65 at last evening's board, closing firm at $61.

Central, No. 2, is in but little request; we notice a single transaction at $900, buyer 30.

Sacramento and Meredith has slightly improved, with increased business. It may be quoted firm at $50.

Burnside may be quoted at $11; Imperial has slightly declined, and may be quoted firm at $165. Adriatic at 8; Baltic was in request the first of the week at from 150@157½, closing at the former figure.

Pride of the West has been heard from at $87½; El Dorado is dull at $50, closing at 41; Empress at 25@35; Badjazette at 50; Melones at 40; Knickerbocker at 40; Crown Point Ravine at 6.

Burning Moscow has met with a slight improvement; opening the week at $85@90, it advanced, with small business, and closed at yesterday's board at 102.

Lady Bryan is again in large request; 3514 shares have changed hands during the week, at from $42@52, closing at 49. The latest reports from this mine will be found noted elsewhere in our present issue.

North American still continues active. It improved considerably before yesterday's board, touching $155 and closing quite firm at $147½; Nevada, (J. G.) may be quoted at $110; Justice at 110; Caledonia Tunnel at 22; Buckeye at 15@18; Central America at 13.

Lafayette has improved to 14; Baltimore American has gradualy advanced to 42@52, buyer 30; Harmon has been in considerable demand at from 24 to 35, buyer 30. Crocket has met with large sales at from $8@10½ the past week. Yellow Jacket has found buyers at $1075.

Real del Monte has been in less request, the past week, and closed firm at from $86@90. Telegraphic advices announce another lot of bullion ($15,000) from the mine, on its way to this city.

Josephine (Coso) is manifesting considerable activity; we note sales of 629 shares at from $3 to 6½. We quote Silver Hill at 7½; Wide West at at 23; Antelope at $200.

Reese River stocks have been in considerable request, the past week. We quote Amador at $75; North Star at 35; Red Jacket at 5.50; Rough and Ready at 70@90 and Lancaster at 10.

Of Owens River stocks we quote Fanny Rayne at $50; Leviathan 50 and St. Lawrence, (Inyo District) 75.

Table Mountain copper is in demand in consequence of favorable news from the mine. A few sales were made yesterday at $23@25, but holders generally are not inclined to sell at any price offering.

WASHOE STOCK MARKET.

The transactions in stocks since our last issue have been quite lively, a large number of feet having changed hands at fair prices. We compile the following report from the Virginia and Gold Hill papers up to Monday evening last:

Knickerbocker has taken a steady and apparently healthy rise—advancing from $22 to 40. Sales of 555 shares are noted.

Rock Island may be quoted at $26½; San Francisco at $3.

Arizona has found buyers at $11@12.

Keystone is quoted at $16; Keystone No. 2 at $4; No. 3 at $2½.

King Soloman has been in considerable demand at from $1½ to 4¼; closing at the latter figure.

Jewett & Shepard, which reached $55 two weeks since, has receded somewhat—closing on Monday last at $40, buyer 30 days; 783 shares have changed hands since our last report.

Pride of America advanced last week from $6¼ to 14 on Friday; since which date it has dropped to $9 and 10, closing on Monday at the last figure. We note sales of 545 shares.

We quote Bullion at $100; Baltimore American at $45@49; Branch Mint at $19.

For Baltic $160 has been refused; Alpha has been in demand at $600; Original Hawkeye advanced from $62½ to 115; bidding subsequently fell to $70, with holders at $140.

Rock Island has fluctuated from $20 to 35, closing at 26½.

Yellow Jacket has been in request at $1,175, with holders at 1,500.

Uncle Sam (Flowery) may be quoted at $4¼; Arrington at $8; White & Saunders at $6; Nightingale at $30; William Penn at $15½; Rock Rose $21½; and Whitman has sold for $41.

Justice has again been heard from at from $110 to 120; Caledonia Tunnel has been in demand at $22, without sellers

Effingham rallied during the past week from $1½ to 4, with sales of 355 shares since our last issue; closing at 3½.

We quote Wisconsin Con., $1½; San Francisco, (G. H.) $3; Belle Vernon, $5; Palo Alto. $4; Kentucky, $5½; Joe Jackson, $10@15; Clinton & Hobbs, $26; Bajazette, $48; Pony Express, $12; Cole, $6½; St. Charles, $2½.

Arizona is steady at $11(@12; Combined Effort has sold for $9; Central America, bidder refused at $4; 20 shares Consolidated Co. sold at $60.

Colorado has improved from $6½ to 8½—45 shares sold; Contraband advanced from $1½ to 3¾, with demand; Crescent is quoted at $7; Diligent at $5; Don Carlos, $3½.

Twenty shares Eureka sold at $15@22½; 30 of Empire at $30; Genty sold at $4½; Globe at $15; Grand Turk at $30; Harold & Argo steady at $11 @13.

Frankell has advanced from $8 to 13, with sales of 140 shares; Globe is quoted at $15; Independent in demand at $50 to 57, without sellers; Northern Light has sold for $12; New Oregon has sold for $13@18, closing at $15½—109 shares changing hands.

Narragansett has met with large sales, 391 shares have changed hands from $3 to 5½—closing at $3¼; Napoleon has sold from $6 to 13, closing firm at the latter figure; 310 shares changed hands; Nevada closed at $15.

Richlieu advanced from $6 to 20, but subsequently declined to $8; 381 shares have changed hands; Overman has sold at $22½; Silver Vale at $9; South Midas, $17½; Sheel at $13, closing at $10.

Toutine has met with large sales from $12 to 20, closing at $18; 375 feet have changed hands; Teutonia has sold at $15; Vulcan at $6½; White & Saunders at $4¼.

SUIT AGAINST THE BURNING MOSCOW.—The suit was brought against this company by W. A. Cornwall to compel them to issue to him 200 shares of the capital stock. The case came up for trial in the 12th District Court, on the 14th inst., Delinquent moved to dismiss cause on the pleading. Case submitted.

PACIFIC GLASS WORKS.—At the stockholders' meeting, held on the 11th inst., the following gentlemen were elected: President, John Taylor; Vice President, Charles Kohler; Trustees, John Taylor, Charles Kohler, Henry Haussman, George Gilmore and Robert Turner.

MINING SECRETARIES, it will be observed, are taking advantage of our reasonable rates by adverting in the PRESS, under the new law.

AN IMPROVED STEAM VALVE.—Our nttention was called a few dnys since to a steam eagine nt work at the Atlas Iron Works, in this city. Tho peculiarity in regard to this engino consists in tho constructiou of the vnlve by which steam is admitted into the cylinder. This valve is n rotating one, possessing important advantages over hoth tho slido nud spring valve. The "wiro-drnwing" nf the former, and the percussion always nttendant npon the latter, is completely obviated by this improvement. All the ndvantnges of tho slide valve nre more than secured, without any of its disadvantages. By the peculiar arrangement of this rotary valvo, steam may be worked expansively, without any additional fixtures, the end being accomplished by a slight variatioa the construction of the vnlve itself. In the working nf this engine the steam is expanded to n point below tho pressuro of the atmosphere *before the stroke is completed*, as is easily shown by the rush of air into tho cylinder through the water cock, whcn opencd for the purpose of observation. This improvement is tho invention of Mr. Scott, one of the proprietors, nnd has been pntented. It is well worth tho nttention of machinists and mill men generally. It may be seen in constant operation at 24 and 26 Fremont street, in this city. See advertisement in another column.

NEW ERA COPPER MINING CO.—We are pleased to learn from the Secretary of the nbove Company, better known to the public as the Illinois, Dou Pedro's Bar, Toulumne river, have struck some very rich copper ore at 125 deep. It appears there are two veins, five feet wide, dipping towards each other, and iacreasiug in richness as they converge. A large, splendid specimen of native copper, containing also considerable native silver from one vein, and of good sulphuret ore from the other, have been shown us by Mr. Barry, the secretary. It may be remembered by many of our readers, that this claim was condemned by an expert sent to examine it. by one portion of the trustees. Our travelling correspondent, who visited the claim shortly afterwards, however, on examination formed a different opinion; aad, besides his favorable report sent to our paper, scnt another by request to the board, in which he predicted copper would be struck at 125 feet. The prediction, it seems, is verified at the exact distance, and, as the shaft was only then 80 feet, we gladly record the fact as aa evidence of correct judgmeut.

THE LECTURE ON MINING, by Professor Price, on Wednesday evening last, at Dashaway Hall, was well attended, and was listened to with much attention and interest. The Professor opened with a few general remarks on the occurrence and character of mineral lodes and their contained metals, confining his remarks chiefly to lodes carrying the precious metals, and closing with some practical remarks on the chemistry of metals. The lecture was illustrated and enlivened by a few illustrative experiments, showing the nature and propertics of certain gasses met with in mines, or occasionally employed in metallurgy. We understand that the Board of Education propose to engraft metallurgy, mineralogy, and nssnying into the course of studies of the pupils at the Boys' High School in this city. The proposition is a most excellent one, nnd should most certainly be carried out.

LADY BRYAN.—Quite a large number of shares have changed hands during the week, although not held so firmly as a favorite stock by the brokers as heretofore. The company received their first communication from their new superintendent, Mr. N. A. Chandler, on the 14th inst. He has exnmined the mine and finds a difficulty in taking out much orc at present; the works are too contracted and he will be obliged to extend the drifts considerably to avoid timbering and unaecessary expense. The drifts are alrcady started and he will "drive on" before taking out ore. He also intends to push the work on the lower tunnel as fast ns possible, as the ground has improved very much in that locality.

VALUABLE SUGGESTIONS.

The following suggestions, which wo clip from Professor Silliman's late Report on the Gold Mines of Nova Scotia, aro equally valuable in this latitude. They should be embodied in the general instructions to every mining superintendent.

The success of the most vuluuble mining property may be blasted by the adoption of n mistaken principle of management. The desire for early returns to stockholders often leads to a shortsighted system of hand-to-mouth admiaistration, the result of which is uniformly fntal. The mine is robbed to secure a specious show of dividends, and then follows an unproductive period, in which the manager finds an empty treasury and no power of new calls on the owners, or a reluctant response, ending soon in the nbandonment of the enterprise. Such is sure to be the case whenever works of exploration arc suspended. The process of extraction is easy and rapid. The remorseless jaws of the crusher devour daily, it may be ten, twenty, fifty tons of ore, and, much sooner than he expects, the manager finds himself without stoping ground, and nothing before him but dreary months of sinking shafts and driviag levels, in which, but a limited force can be employed. The organization of the mine is demoralized; the expenses of administration and of the plant continues undiminished; the mill rests idly for want of ore, while the labor of exploring is being prosecuted. Every one who has had any familiarity with the history of mining, in America especially, will admit the truth of this picture. The cure is simple nnd unfailiug. *The work of exploration must never stop, and must be always in advance of the work of extraction.*

Another important consideration besides those nlready named urges the adoption of this policy. It is unreasonable to expect that any of the veins on your property, will prove equally remunerative in all parts. There will be some places too poor to pay for working, or the veins may be pinched off to a narrow thread, enlarging again to perhaps more thau average size nt no great distance. These inequalities are of little importance, and by no means causes of discouragcmcnt, if they are known to exist in advance. But, suppose the policy of temporizing to prevail, and such a condition as the last named to occur, discouragcmeut would be unavoidable. Moreover, supposiag the worst case possible, namely, the actual loss of the vein in depth, either by a fault or a heave, or by actual dwindling to nothing—if the explorations arc well in advance of extraction, the manager sees at once the danger before him, and, with prudent energy, commences timely rcsearches on another vein, or in a new part of the old oue, and thus disaster is averted.

GOLD FROM SULPHURETS.—The editor of the Nevada *Gazette* has seen a bar of gold, valued at $1,400, taken from sulphurets by Oscar Maltman, at his mill, nenr Nevada City.

ENLARGEMENT
—AND—
Important Improvement
—OF THE—
MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

TWO VOLUMES (OF 416 PAGES EACH) PER ANNUM.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,.....5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

PROF. J. D. WHITNEY, DR. T. M. LOGAN, DR. J. A. VEATCH, REV. O. C. WHEELER, M. ATWOOD, PROF. W. H. BREWER, J. H. CHURCHILL, A. M., A. B. PAUL, H. S. BROOKS, W. WADSWORTH, T. PRICE, J. E. CLAYTON.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of
Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.
Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralogical questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the PRESS will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

DEWEY & CO., Publishers.

OFFICE in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

C. W. M. SMITH.....W. B. EWER.....A. T. DEWEY.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Mining Notices.

Ida Gold and Silver Mining Company, Russ District, Tulare county, California.—Notice is hereby given, that on SATURDAY, May 14th, 1864, at noon, there will be sold, at Auction, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco, a sufficient number of shares in the capital stock of the Ida Gold and Silver Mining Company, standing in the names of the following persons, to pay the Assessment (No. 6) of one dollar per share, levied December 2, 1863, and the Assessment (No. 7) of two dollars per share, levied March 2, 1864, together with the expenses of advertising and sale, unless the same shall have been previously paid—viz:

And in accordance with law, and an order of the Board of Trustees, made on the 6th day of April, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the sales-No. 400 Montgomery street, on the 16th day of May, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent asses sment thereon, together with costs of advertising and expenses of the sale.

T. L. BIBBINS, Secretary *pro tem.*

Office, 302 Montgomery street, San Francisco, Cal.

San Francisco, April 16th, 1864. 16-4t

Office of the Cedar Gold and Silver Mining Company, Esmeralda District.—Notice is hereby given, that there is delinquent upon the following described stock, on account of assessments levied on the 28th of March, 1863, July 16th and July 17th, 1863, respectively, of fifty cents per share each, as follows:

Assessment No. 1, 50 cents per share, levied March 28th, 1863.

Names.	No. Certificates.	Shares.	Amt.
H. S. Sanders,	Stock not issued.	88	$44 00
S. O. Sheldon,	Stock not issued.	5	2 50
J. R. McGinnis,	Stock not issued.	9	4 50
Amos Houlton,	27	10	5 00

Assessment No. 2, 50 cents per share, levied July 16th, 1863.

L. B. Greenman,	6, 7, 8 and 9	50	25 00
Warren Norton,	31	12	6 00
T. E Dorr,	43 and 44	20	10 00
James W. Tilton.	Not issued.	2½	1 25
J. R. McGinnis,	Not issued.	9	4 50
S. O. Sheldon,	Not issued,	5	2 50
H. S. Sanders,	Not issued.	88	44 00

Assessment No. 3, 50 cents per share, levied July 17th, 1863.

L. B. Greenman,	6, 7, 8 and 9	50	25 00
Warren Norton,	31	12	6 00
T. E. Dorr,	43 and 44	20	10 00
James W. Tilton,	Not issued.	2½	1 25
J. R. McGinnis,	Not issued.	9	4 50
S. G. Sheldon,	Not issued.	5	2 50
H. S. Sanders,	Not issued.	88	44 00

And in accordance with law, and an order of the Board of Trustees, made on the 11th inst., so many shares of each parcel of said stock as may be necessary, will be sold at the auction rooms of Jerome Rice & Co., 327 Montgomery street, on MONDAY, the 16th day of May next, at 12 o'clock M., to pay the said delinquent assessments thereon, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

T. L. BIBBINS, Secretary.

Office, 302 Montgomery street, San Francisco, Cal.

April 15th, 1864. 16-4t

Office of the Eureka Mining Company, Location of Works, Mineral Spring Mining district, County of Calaveras and State of California.

Notice is hereby given, that at a meeting of the Trustees of said Company, held on the 12th day of April, 1864, an Assessment of 20 cents per share was levied upon the Capital Stock of said Company, payable on the 16th day of April 1864 in United States Gold Coin, to the Secretary, at the Office of the Company, No. 625 Clay St., San Francisco, California.

Any stock upon which said Assessment shall remain unpaid on the 14th day of May, 1864, will be advertized on that day as delinquent, and unless payment shall be made before, will be sold on the 30th day of May, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale.

C. W. HAYDEN, Sec'y.

Office, at No. 625 Clay Street, San Francisco, California. 16-4t

Rose Linda Mining & Manufacturing Company, Mokelumne Mining District, Amador County, Cal.—Notice is hereby given that at a meeting of the Trustees of the above Company, held on the 11th day of April, 1864, an assessment of Fifty (50) cents per share was levied upon the Capital Stock of said Company, payable in Gold and Silver coin on the 11th day of May next, to the Secretary, at the Office of the Company, 5 9 Clay St., Room No. 2.

Any Stock upon which said assessment shall remain unpaid on the 11th day of May next, will be advertised on that day as delinquent, and unless payment shall he made before, will be sold on the 26th day of May 1864, at the Office of the Company 509 Clay St., to pay the delinquent assessment, together with the costs of advertising and expenses of sale. HENRY HALE, Sec'y.

San Francisco, April 11th, 1864, 16-4t

Office of the Henry and Bernard Consolidated Gold, Silver and Copper Mining Company.

WANTED.—Proposals for runing a tunnel, from 130 to 150 feet, into a claim owned by the Henry & Bernard Consolidated Gold, Silver & Copper Mining Company, situated in Weaver district, Arizona Territory, about 10 miles from Olive City. For description of the ground and specifications, Apply to I. M. BLOOD, General Superintendent, at the Office of the Company, No. 334 Montgomery street, San Francisco, from 10 to 11 o'clock, A. M.

16v8-tf GEO. W. GILDERSLEIVE, Sec'y.

SECRETARIES' MEMORANDA.

For Advertising Mining Notices in the Mining and Scientific Press.

Assessments levied by order of the Board of Trustees of Mining Companies will be duly advertised, in strict accordance with the new law, in the MINING AND SCIENTIFIC PRESS by observing the following rules, which we publish for the purpose of assisting Secretaries in expediting their business, and avoiding the possibility of errors in regard to dates:

When the order for an assessment is made on MONDAY, TUESDAY, WEDNESDAY, THURSDAY or SATURDAY of *any week*—

THE NOTICE OF ASSESSMENT may appear on the FIRST Saturday subsequent to the order.

THE DAY FOR THE NOTICE OF SALE to appear may be fixed on the FIFTH Saturday subsequent to the order.

THE DAY OF SALE may be fixed on the SEVENTH Saturday, or any day (except Sunday) from that date to the eighth Friday, subsequent to the order.

OWING to the arbitrary provisions of the new law (the original bill of which deprived the mining public of the benefit of their choice of advertising in weekly journals), no assessment can be made upon any Friday, and the publication for the collection of the same be made weekly in the Saturday issue of any daily or weekly news-paper.

REVISED COPIES of advertisements will be printed gratuitously for Secretaries who desire advertising near the mines.

ADVERTISEMENTS should be handed into the office as early in the week as possible.

DEWEY & CO., Publishers,

15-tf 56 and 57 Government House, San Francisco.

Record of New Incorporations.

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

FOUND AND BURIED.—The party which went out from Star City in search of the remains of the late Dr. Smeathmad, were successful in their praiseworthy efforts. They found the body in a good state of preservation. The clothing was entirely stripped from it; in other respects it appears to have been undisturbed. They buried him where he fell. No Indians were seen.

A BROKERS' BOARD AT REESE RIVER.—We learn from the Reese River *Reveille* that the Pioneer Stock and Exchange Board perfected its organization on the 26th of March by the election of the following officers: J. M. Hixon, President; R. H. Shields, Vice President; J. M. Dawley, Secretary; W. W. Hobart, Treasurer.

THE Museum of Prague has just received a valuable gift, consisting of a colossal map of China, composed of eight large rolls of paper, neatly fitting each other. This work was executed in the seventeenth century, by some Catholic missionaries, under the Emperor Kang-Hi. The Chevalier Lipowski purchased it lately, during his stay in China, of a family which had been ruined by the war.

THE best mines this summer, says the Portland *Oregonian*, will be the farms of the Willamette valley. There is no mistake about it, and we hope their owners will understand it and cultivate every acre possible. Sensible.

THE school boys of Marysville are subscribing to a fund to buy and erect a monument over young Murbry, who was accidentally killed a few weeks ago by being thrown suddenly to the ground while wrestling.

SOMEBODY has given utterance to the following scrap of philosophy which if it be not good is at least cool: "The poor man's purse may be empty but he has as much gold in the sunset, and silver in the mood as anybody."

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

WIRE ROPE MANUFACTURERS.

Established 1857.

Office, No. 412 Clay street—Works, North Beach,

SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for

HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES,
ETC., ETC., ETC., ETC., ETC., ETC.

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

IMPROVED WATER-WHEEL,

—PATENTED BY—

John Tyler, West Lebanon, N. H.

GIVING THE MAXIMUM POWER WITH THE MINIMUN COST—HAVING THE FOLLOWING AS SOME OF ITS ADVANTAGES OVER OTHERS—GIVING THE BEST PER CENTAGE OF WATER USED, DURABILITY.

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

WHEELER'S

Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

***These Pans may be seen in daily operation at the Miners' Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

Business Directory of San Francisco.—Messrs. Stillwell & Co. are said to be meeting with excellent success with their important undertaking, and the public will soon be furnished with a convenient ly arranged book, containing the advertising cards of our leading firms, with a historical sketch of each upon the opposite pages.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the Mining and Scientific Press. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money ma be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

For sale, Wholesale and Retail, by SAMUEL ADAMS, U. S. Drug Store, corner of Pine and Kearny Streets, San Francisco. 6v8-2m

PRATER'S

PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, HAVING completed arrangements for its manufacture at the Fulton Foundry, in this city, now offers it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHALER & THAYER'S REDUCTION WORKS,

North Beach, San Francisco,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

nov5 3m* HEPBURN & PETERSON.

Now therefore, under and in pursuance of law and the order aforesaid, notice is hereby given, that so many of the shares standing in the names of the persons above mentioned respectively, as will be necessary for the payment of the assessment aforesaid, together with the expenses of advertising and other expenses of the sale, will be sold, according to law and the by-laws of the said Billet Gold and Silver Mining Company, at the salesroom of Jerome Rice & Co., No. 327 Montgomery street, in the city and county of San Francisco, California, on WEDNESDAY, the 18th day of May, A. D. 1864, at 11 o'clock A. M. of that day, unless said assessments, with accruing charges, are previously paid. By order of the Board of Trustees. (16-4t) D. B. FRANCIS, Secretary.

Mechanics Gold, Silver and Copper Mining Company's Office No. 322 Front street, San Francisco, April 16, 1864. Notice is hereby given, that in accordance with the laws of the State of California, and the by-laws of said Company, and an order duly made by the Board of Trustees of the Mechanics Gold, Silver and Copper Mining Company, there will be sold at Public Auction, by Jerome Rice & Co., 327 Montgomery street, San Francisco, on WEDNESDAY, May 18th, 1864, at 11 o'clock A. M., to the highest bidder, for cash, in United States gold coin, so many shares of the stock of said Company, standing in the names of the following persons, or shareholders, as will be necessary for the payment of assessment No. 4, duly levied thereon, and still remaining due and unpaid, together with expenses of advertisement and all other expenses of sale, to wit:

By order of the Board of Trustees.

A. B. WINEGAR, Secretary,
15-4t No. 322 Front street, San Francisco.

Mammoth Gold and Silver Mining Company, Rock Spring District, San Bernardino Co.

Notice is hereby given that at a Meeting of the Board of Trustees of said Company, held on the 13th day of April, 1864, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable on the 15th day of April, 1864, in United States gold and silver coin, to the Secretary, or to Wm. H. Hilton, Superintendent, at the mine.

Any stock upon which said Assessment shall remain unpaid on the 14th day of May, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 28th day of May, 1864, to pay the delinquent Assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

GEORGE BOWER, Secretary.
Office, No. 611 Clay street, San Francisco. 15-td

Two Good Canvassing Agents can find profitable employment by calling at this office. None but active and competent need apply.

Saxon Copper Mining Company, Calaveras Co., Cal.—Notice is hereby given that in accordance with the laws of the State of California and an order duly made by the Board of Trustees of this Company, there will be sold at Public Auction at the office of the Company, at Copperopolis, on the 10th day of May, A. D. 1864, at three o'clock, p. m. of that day, to the highest bidder, for cash, in United States gold coin, so many shares of the capital stock of said Company standing in the names of the following shareholders as will be necessary for the payment of the assessments duly levied thereon by the Board of Trustees, together with the expense of advertisement and sale, unless said assessment and charges are paid before said sale.

A. Lamb,	No. 38	15	3 75
C. W. Skinner,	Nos. 108, 109	100	25 00

And in accordance with law, and an order made by the Board of Trustees on the 12th instant, so many shares of each parcel of said stock as may be necessary will be sold, at the office of the Company, in the city of San Francisco, at 12 o'clock M., on SATURDAY, the 14th day of May, 1864, to pay said delinquent assessments thereon, together with costs of advertising and expenses of sale.

J. F. STIRLING, Secretary,
No. 502 Montgomery street, Room No. 1, 3d floor.
San Francisco, April 16, 1864. 16-td

Butte Gold and Silver Mining Company, Reese River Mining District, Lander Co., N. T.

Notice is hereby given, that at a Meeting of the Board of Trustees of said Company, held on the 16th day of April, 1864, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable on the 16th day of May, 1864, in United States gold and silver coin, to the Secretary, or to Dr. A. K. Stearns, Superintendent of the mine, at Austin, N. T.

Any stock upon which said Assessment shall remain unpaid on Saturday the 21st day of May, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 4th day of June, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale. By order of the Board of Trustees.

J. F. STIRLING, Secretary.
Office, 502 Montgomery street, San Francisco. 16-4t

Mount Zion Gold, Silver and Copper Mining Company, Clayton District, Contra Costa county, Cal.

Whereas, the Board of Trustees of the Mt. Zion Gold, Silver and Copper Mining Company did, on the 5th day of March, 1864, levy an assessment (No. 11) of twenty-five cents upon each and every share of the capital stock of said Company, legal notice of which assessment has been given to the Stockholders thereof; and whereas, the said Board of Trustees did, on the 5th day of April inst., declare delinquent all of said assessment then remaining unpaid, and order the same advertised for sale, in accordance with the laws of the State and the by-laws of the Company; therefore, notice is hereby given, that there will be sold, at the office of the Secretary, No. 240 Montgomery street, on MONDAY, the 16th day of May, 1864, at 12 o'clock M., a sufficient number of the shares of the capital stock of said Company, standing in the names of the following Shareholders respectively, to pay the said assessment, together with the costs of advertising and sale of the same, unless said assessments and costs of advertising shall have been sooner paid, to wit:

And in accordance with law, and an order of the Board of Trustees, made on the 13th inst., so many shares of each parcel of said stock as may be necessary will be sold by Jerome Rice & Co., public auctioneers, at their salesroom, No. 327 Montgomery street, San Francisco, on WEDNESDAY, the 18th day of May next, at 11 o'clock A. M., to pay said delinquent assessments thereon, together with costs of advertising and expenses of the sale.

JOHN B. RUSSELL, Secretary.
Office 430 Jackson street, San Francisco.

Wide West Copper Mining Company, Office 645 Clay street, San Francisco, March 26th, 1864.—Notice is hereby given that an assessment, No. 3, of thirty cents per share was this day levied on each and every share of the Capital Stock of the Wide West Copper Mining Company, payable in U. S. Gold Coin, to the Secretary at the Office of the Company or to J. M. Piaz, Superintendent Copperopolis. By order of the Board of Trustees.

14-4t M. G. ELMORE, Sec'y.

Walipi Gold and Silver Mining Company, Moss Lode, San Francisco District, Arizona.—Notice is hereby given, that the Board of Trustees of the Walipi Gold & Silver Mining Company, at a meeting of said Board held March 21st 1864, levied an assessment of fifty cents on each and every share of the Capital Stock of said Company, said assessment payable immediately in Gold Coin to the Secretary at the Office of the Company, No. 620 Washington Street, Room No. 3.

13-5t W. AUGUSTUS KNAPP, Sec'y.

Revere Gold & Silver Mining Company, Reese River Mining District.—Office No. 22 Lyceum Building, San Francisco February 23d, 1864.—Notice is hereby given that an assessment of Twenty-five cents per share was this day levied on each and every share of the Capital Stock of the above named Company, payable immediately in U. S. Gold Coin, to the Secretary, at the Office of the Company. By order of the Board of Trustees.

15-4t. H. C. KIBBE, Sec'y.

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

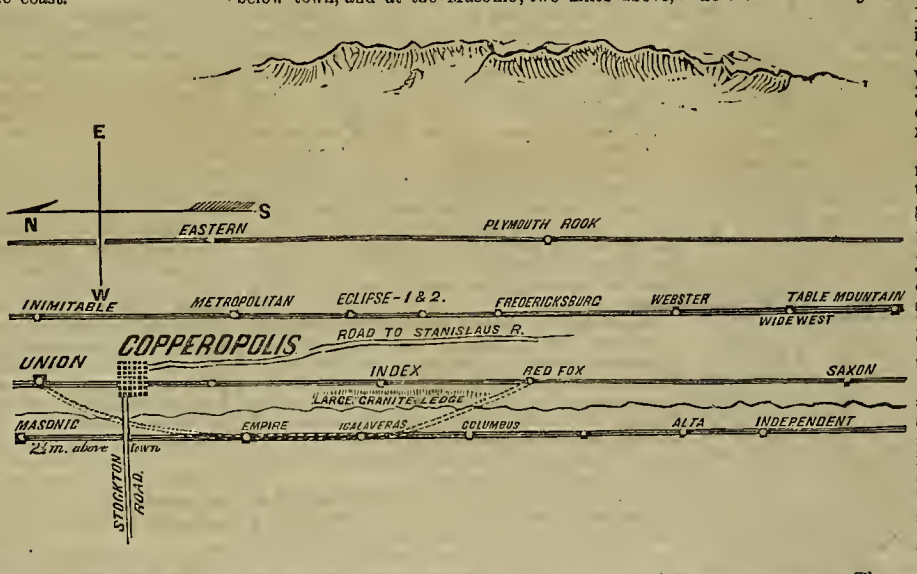
VOLUME VIII. SAN FRANCISCO, SATURDAY, APRIL 23, 1864. NUMBER 17.

Contents:

No. 17—April 23, 1864.—Copperopolis Copper Veins—Illustrated; Ziroogel's Method of Extracting Silver; Santa Catalina Island; Letters from Reese River; Owen's River; City Stock Reports—Sales, Bids and Prices Asked; Washoe Sales; Reese River Stock Board; Mining Gossip; How Some People Get Rich; Mechanical Department—More About Generating Steam; Explosion of Steam Boilers; Artificial India Rubber; Humboldt Mines; New Patents; Safe Hook; Mining Share Market; Howell's Crusher; Reese River Mines, No. 2; The Kohler Brothers and Other Mines; Mining Laws Passed by the Last Session of the Legislature; Washoe Mining Items, Incorporations, etc.

Copperopolis Veins, Calaveras County, Cal.

Having given notice that our first page is at the service of the public, for the illustration of mines, machinery, etc., we give place to-day to the annexed diagram, illustrative of a theory entertained by many with regard to the system of mineral veins developed in Copperopolis. The projection of mineral veins, in connection with the location of claims upon the same, is a study of much practical importance, and one which, when attempted by incompetent parties, is often attended by immense loss of capital, as well as one of the most fruitful sources of litigation on the Pacific coast.



Until quite recently the generally received theory of the Copperopolis copper mines has been that there was but one vein passing through the valley, with, perhaps, here and there an existing spur. Some few months since, certain parties conceived, from developments recently made, there must be four parallel veins; and that the original locators of the Union Mine, in running out their ground had deflected from the true course of the vein, following the dotted line represented in the diagram, until they struck the vein next parallel and to the west.

There is evidently much that is reasonable in the theory above represented, nor can it be denied the question is one of much importance to all parties holding mining interests in that section. If there are less than four veins running through the valley, a large number of companies cannot possibly have any lead; while if there are four, the chances of all are multiplied for a successful issue to their development.

In this connection we would state, in order to make the above diagram intelligible, that the engraver has been obliged to greatly condense the territory represented longitudinally, as compared with its breadth. The reader will bear in mind that the region of country represented is some five or six miles in length by about one half a mile or so in breadth. It will, therefore, be seen, that the variation represented by the dotted line, should really present but a slight deflection from a straight line, and is only perceptible upon the ground by the most careful scrutiny or perhaps accurate survey.

If according to the old theory of there being only one, or at the most two veins in this system instead of four, the inconsistency and difficulty would be very little diminished. Take, for instance, the location of the Empire and Plymouth Rock, as illustrating the absurdity of one vein—the Columbus, Red Fox, Fredericksburg and Plymouth Rock, as illustrating the absurdity of two. If the theory, however, of four veins be admitted, then their prospect of future success at once assumes a tangible and important shape. The fact of there being four veins at Copperopolis appears to be fast becoming the prevailing idea, and it is certainly strengthened if not confirmed by the additional fact, that north, up the valley, to John Bull District, and south, down to the Crimea House, (the correct linear course of the Copperopolis system,) there are four distinct veins appearing all the way in both directions. If at Copperopolis anything further were wanted to prove the old survey wrong, it is the opening of another claim *below* the Columbus and above the Alta, with good prospects of success.

Taking up the argument, as it presents itself to us by the accompanying diagram, the old location of the Union, immediately south of the town, certainly appears wrong; but that does not make the western vein or portions of it less valuable *per se*. There can be no doubt that the western vein as it shows itself at the Calaveras and Empire, immediately below town, and at the Masonic, two miles above, is large, healthy and strong. Of its intrinsic value ultimately there can be little doubt. All that is claimed, as we understand the matter, is, that as a question of science, alone affecting the value of other claims in the vicinity, it cannot possibly be on the original Union or Red lead, and that as the Inimitable goes to the Metropolitan, Eclipse Nos. 1 and 2, the Webster, Wide West, and Table Mountain, and perhaps as a general thing the best vein of the four, so the Union goes to the Index, Red Fox and Saxon, and the western vein from the Empire runs to the Columbus, the Alta, Independent, and off west of the Saxon.

From what has already been said, it will be perceived that a question of a single or multiple system of veins has arisen in Copperopolis, quite similar in character to that which for a long time existed in Washoe, with regard to the Comstock lode. The more recent developments tend strongly to show the latter theory to be correct. In Virginia City, indeed, the theory has been fully demonstrated in reference to the Comstock lode, as will be seen from the following paragraph, which we clip from the *Territorial Enterprise* of the 8th instant:

"According to the evidence of one of the officers of the Latrobe Tunnel Company, given in the District Court to-day, in the North Potosi and Savage case, we understand that this great tunnel has cut through (commencing in the vicinity of the Ophir or main Comstock ledge,) four distinct leads; the fourth, or last one cut into, being the best. The first veins appear to be a good deal broken up and mixed with clay and porphyry. As the Tunnel Company have not allowed visitors to enter their tunnel, and have always kept pretty mum about their underground proceedings, this may be set down as news from the 'dark profound.'"

This theory in reference to Copperopolis will soon be proved. The Index, located upon this principle, is regarded as very valuable, and in conformity therewith arrangements have been completed for sinking a shaft one hundred feet deep. It is now owned principally by San Francisco and Washoe capitalists, who are determined to open the claim as rapidly as possible.

An American Crushing Machine in England.—The London *Mining and Smelting Magazine*, for March, makes the following notice of Blake's Crushing Machine, which was illustrated in No. 3 of the present volume of the Mining and Scientific Press:

At the anniversary meeting of the Institution of Mechanical Engineers held at Birmingham on January 28th, a paper was read by Mr. J. Lancaster, on a machine for breaking limestone and ore, in use at Kirkless Hall Ironworks. This machine, the invention of Mr. Blake, of Connecticut, consists of a hopper, in which the stone is broken between a pair of jaws, one fixed in the frame of the machine, and the other vibrating on a center thro' a short distance, worked by a long lever, moved by a crank-shaft driven by steam power. The crushing faces of the jaws are grooved with alternate corrugations, and the vibrating jaw is suspended at a small inclination to the fixed jaw, and is pressed forwards a short distance at each stroke, by which a very powerful crushing action is obtained. The frame of the machine is of cast-iron, of great strength. The material to be broken is fed in at the top between the jaws, by which it is gradually crushed and broken, until it is reduced to pieces small enough to fall out at the bottom of the jaws, the space between the jaws at the bottom being adjusted according to the size to which the stone is required to be broken. The machine is driven at about two hundred strokes per minute, and the quantity of limestone broken is about 100 tons per day or ten tons per hour. It is found to have special advantages in its strength of construction, and in the small amount of wear and tear, in consequence of the parts subjected to the severe crushing strain being simple pressure pieces of cast iron, of an advantageous form for strength, and having large bearing surfaces with small extent of motion upon them. The only parts exposed to wear are the two plain cast iron jaws, which are readily replaced. [Machines of this description, termed Macadamizers, are in general use.—Ed.]

Ziervogel's Method of Extracting Silver.

Two weeks ago we gave a description of Augustin's process of extracting silver. We now place before our readers the process introduced by Ziervogel. The former process has recently been laid aside at the Mansfield Copper Works, the latter being substituted in its stead. This process is divided into three distinct operations, as follows:—1st. The calcination of the ground copper-regulus. 2d. The lixiviation and formation of the silver precipitate. 3d. The drying and refining of the silver. The description of this process, which we give below, was prepared by R. Wagner, for the *Chem. techn. Jahresber*, vii. Jahrg :—

I. Calcination of the Ground Copper-regulus.—This, which is effected in double-bedded reverberatory furnaces, is the most difficult portion of the whole process, and is divided into two stages: 1st, the oxidation of the sulpbides, that is, their conversion into sulphates; and 2nd, the decomposition of these sulphates at a higher temperature, so that FeO,SO^3 decomposes first, then ZnO,SO^3, and lastly CuO,SO^3, while the AgO,SO^3 remains unaltered.

In the first stage, the ore is charged to the upper bed, which has no fire-place, but which is heated by the furnace below. The charge is composed of 497 lbs. (German) of ground copper-regulus; 50 lbs. of the richer residues of the desilverising vats (that is, those containing more than 18 grans—17 grains English—per centner); 37 lbs. of lixivated regulus, clotted together during former calcinations; 4 lbs. of silver scrapings that have been lixiviated and roasted three times; and 4 lbs. of the lixiviated bed of the furnace. Half the richer residues are first spread evenly over the upper bed, since, being almost pure CuO, they do not readily adhere; upon this, half the ground regulus is charged; then the clotted regulus and the silver scrapings; then the remaining half of the richer residues; and lastly, the other half of the ground regulus. The charge is regularly stirred for from four to five hours, to prevent the agglomeration of the sulphides, and to expose every portion to the air. After this, 20 lbs. of coarse lignite slack are spread evenly over the charge, the whole being then well mixed by stirring. The lignite is soon completely ignited, and after its flames are extinguished the charge is passed through the communication in the floor on to the under bed, during which operation the dampers of the flues must be completely closed. On this lower bed the charge continues to be stirred for from one and a-half to two hours, without any addition of fuel—an operation which is called the cooling, and which effects the complete oxidation of the ground regulus. After one hour's stirring, the charge is turned over for the first time, and then again at the end of another hour, when it is a dark red heat. A test sample now taken shows scarcely any traces of iron, but a considerable proportion of copper and silver; while one taken immediately after the charge was brought on the lower bed showed (when dissolved in water with chloride of sodium) a greenish color, without any precipitation of silver. The turning-over is effected by heaping up in the middle of the furnace the charge of one-half of the hearth, on which the charge on the other half is then spread ont, the heap being afterwards spread over the second half.

The second stage, or dead-roasting, by which the sulphates are partially decomposed, is now commenced, the heat of the surface being slowly raised to a high temperature, while the charge is kept well stirred all the time. On the completion of the roasting, which is first effected near the fire-bridge, a test sample shows a bright blue color, and gives a considerable precipitate of chloride of silver. The completely roasted charge is now riddled, from 50 lbs. to 60 lbs. of which remains behind as clotted ore. Three men are employed at the lower bed, and two at the upper. The sulphur fumes are very injurious to the breathing of the men, which increases the difficulties of working.

Chemistry of the Process.—The ground copper regulus consists, essentially of Cu^2S, FeS^2, Pb^2S, ZnS, AgS, with MnS, NiAs, CoAs, SbS^3, AsS^3. The FeS^2 first oxidises in the upper bed, upon which SO^2 is given off, while FeO,SO^3 remains. Similarly CuS oxidises to CuO,SO^3. AgS is not altered in the upper bed; nor could it indeed, by itself, be converted into AgO,SO^3 even by the most careful roasting. This can be effected, however, in the presence of the sulphides of other metals, through the decomposition of their sulphur salts, and the consequent liberation of sufficient O to allow of the conversion of the AgS into AgO,SO^3. The heat arising from the combustion of the lignite decomposes the FeO,SO^3, while the CuO,SO^3 and AgS remain unaltered; for, of these three metals, the most easily oxidisable is the Fe, then the Cu, and last the Ag. The FeO of the decomposed FeO,SO^3 oxidises to Fe^2O^3, and the Cu^2S passes completely into CuO,SO^3. At this stage of the process the under hearth is heated, when the CuO,SO^3 is decomposed into SO^3 and CuO, which decomposition however is not complete, as the AgO,SO^3 may now perhaps begin also to decompose.—So much for the roasting process, after which follows the lixiviation process. The mass now to be treated contains the Ag principally, as AgO,SO^3—the Cu as CuO—and the Fe as Fe^2O^3: it will be well if all the FeO is oxidised to Fe^2O^3, for FeO readily takes up the AgO,SO^3,—both as O as well as SO^3—leaving the metallic silver behind.

II. Lixiviation, and Formation of the Silver Precipitate.—The lixiviating apparatus consists—of a reservoir for receiving the solution; of a vessel for heating the water; of lixiviating vats; of settling or clearing tanks; of precipitating vats; and of a pumping reservoir with its apparatus for raising the solution. These are arranged in terraces over each other, so that the solution may pass readily from one to the other.

The reservoir for receiving the solution is of wood, sheet-copper, or lead, and is separated into two compartments, each of which has an opening that can be closed up; so that the operation may not be interrupted if a portion of the reservoir required cleaning or repairing. It has a capacity of 500 Hanoverian cubic feet (450 cubic feet English); and leaden pipes extend from the bottom of it for the purpose of conveying fresh solution into the lixiviating vats, communicating with each of the latter by a vertical pipe with a tap.

The vessel for heating the water has a capacity of from 200 to 300 cubic feet Hanoverian (173 to 260 cubic feet English). It is heated by a worm pipe supplied with steam from the boiler, which has two pipes—one near the bottom, leading to the lixiviating vats, and the other to the reservoir for receiving the solution.

The lixiviating vats, which are 26½″ high, are nearly cylindrical in form, having a diameter of 27½″ at the top (including the thickness of the sides 1½″) and 25½″ at the bottom. Each vat has a double bottom—the upper one being perforated and serving as a filter. This perforated filter, which is 19″ down, is made up of two parts;—the under part, a perforated wooden disc 23″ in diameter, exactly fitting into the vat, with ½″ holes bored 1″ apart, through both the planks and the cross-pieces that hold them together and tightly packed with tow; and the upper part, of basket-work, with a linen disc covering 25″ in diameter. There is 2″ of space from the bottom of this filter to the bottom of the vat, in which space there is a tap at the side. Ten such vats are in constant work, and are ranged in a row on the top terrace. The taps from these vats discharge themselves into a wooden funnel which conveys the solution into the settling tanks.

The settling or clearing apparatus consists of a rectangular tank, partitioned lengthways into two compartments held together by an iron frame-work, which can be tightened from time to time by wedges. An opening along the partition, lengthways, allows the clear solution to pass after settling from the back into the front compartment, from which it passes through a tap into the silver precipitating vats on the second and third terraces.

The precipitating vats are arranged similarly to the lixiviating vats, only smaller. The hight is 23″, and the greatest diameter is 23″; space between the two bottoms 1½″. From the top of the vats on the third stage the solution passes directly into the vats of the fourth, from which the almost desilverised solution passes into the pumping reservoir, out of which it is raised by machinery to be again passed through the lixiviating vats. In the vats of the third terrace there is scarcely any silver, and beautiful crystals of gypsum are found to form on the pieces of copper and on the sides of the vats.

The pumping reservoir is formed of a wooden tank placed in a brick cistern; the space between the tank and the cistern being compactly packed up with clay, brick-dust, burnt lime, or gypsum, so as to prevent the escape of the solution. The solution is lifted by a force pump into the receiving reservoir. If it is too cupriferous, it is passed over fragments of iron, and the copper precipitated, after which it flows off. The ground regulus contains from 72 to 75 per cent. of copper, and from 14 to 16 *loth* (7 to 8 oz. English) of silver in the centner (110¼ lbs. English); and the silver precipitate (cement silver) has a *Feine* of about 270 gran. The copper in the vats of the third terrace is cleared from the silver precipitate every twenty-four hours, and that in the fourth terrace every six days.

The process of lixiviation is as follows: 497 lbs. of well roasted ground regulus are introduced (hot, if possible,) into the empty lixiviating vat, and spread carefully over the linen filter, and over this regulus a perforated cover is laid, so that the fluid thrown upon it may be equally distributed. The tap of the vat is now opened, and water heated from 70° to 80° Cent. (152° to 176° Fahr.) is thrown over the covered regulus. After from a quarter to half an hour, this hot water is replaced by a desilverised solution of sulphate of copper, heated to a like temperature. As this solution does not contain free sulphuric acid to lixiviate the charge perfectly, ½ lb. of sulphuric acid is added, which changes the basic sulphate of silver, that is soluble with difficulty, into the neutral sulphate. When, as is usual, eighteen charges are lixiviated during the twelve hours, the 9 lbs. of sulphuric acid required for this number of charges, being first diluted with two quarts of water, is placed in a vessel over the lixiviating vat, and allowed to pass through a tap, drop by drop, into the vat. This last solution, after being heated to the necessary temperature, is conveyed through the lixiviating vats so long as it shows silver on passing, after which it is allowed to escape. The uppermost layer of the charge, 1″ thick, being the least desilverised, is scraped off and roasted again. The lixiviating vat is emptied by a copper shovel, and the residues conveyed to the drying house. If sufficiently roasted they should contain at most 1 *loth* (½ oz.) of Ag. per centner of Cu; if they contain more they must be roasted over again. After the solution has passed through the lixiviating vat, and has desilverised the AgO,SO^3, it passes into the settling vessels. Here the particles of copper carried with it are deposited, upon which the solution passes through the opening into the front compartment, from which it flows into the precipitating vat over bars of copper. During the process, the solution from all the lixiviating vats becomes mixed, so that in each precipitating vat an almost equal quantity of Ag is precipitated. The ground regulus is principally CuO and Ago,SO^3 and Fe^2O^3. The Ago,So^3 is dissolved, and CuO and Fe^2O^3 remain behind. The small quantity of CuO,SO^3 present also dissolves. In the precipitating vats, a quantity of Cu becomes dissolved, corresponding to the quantity of Ag precipitated.

III. The Drying and Refining of the Silver.—The apparatus for this purpose comprise collecting, stamping or grinding vats and washing vessels; drying kilns and a gas-generating reverheratory furnace. The collecting vat is similar to the lixiviating vats; the grinding vat is a wooden mortar with a wooden pestle. The washing vessels are of the same size and form as the precipitating vats, only they have no tap between the two bottoms, but instead a wooden pipe, having a tap at the top, goes up the washing vessel from between the two bottoms, so that the vessel is always full. The drying pans are of strong sheet copper, 19″ long, 12½″ wide, and 6″ deep, and stand in an iron stove. The silver precipitate, which is impure from the mixture of gypsum and copper, with a *Feingehalt* of 190 to 200 grm., is washed and purified in earthern pans and wooden tubs until it has a *Feine* of 268 to 270 grm. It is then refined in a reverheratory furnace, the bed of which is of wood ashes, on which from 1,500 to 2,500 marks (from about 12,000 to 20,000 ounces) can be refined at one time. The silver, cast into ingots, has a *Feine* of from 281 to 282 grm.

Important to Mining Incorporations.—We find the following in the Virginia City *Union* of the 15th inst, which would seem to demand the immediate attention of those concerned :

"We learn from the County Clerk, that out of nearly one thousand certificates of incorporation filed in his office, the trustees of not over fifty companies have filed their second oath of office, as required by an act passed by the last Legislature. It is the opinion of lawyers, who have been consulted on the subject, that such an omission would vitiate all their acts until the duty is performed. If such is the case, the failure will be a fruitful source of litigation in the future, and trustees should investigate the matter immediately.

An Owens River Test.—We have seen the solid evidence of an assay of 22½ lbs. of rock, worked in Wheeler's pans, from the Twin Brothers lode, Rubicon Company, of Keyes district. The bullion amounts to $3.08 in gold and $2.61 in silver, the yield proving at the rate of $520 per ton of $2,000 lbs. Better looking rock has since been received. It has the appearance of uniform gold and silver bearing quartz.

The Government is considering the propriety of issuing one and two cent pieces of bronze, the price of nickel being extremely high.

[Written for the Mining and Scientific Press.]

Santa Catalina Island.

This island, which has of late created so much excitement in this city, is situated between the 33d and 34th degrees north latitude, and forms one of the group of islands about the Santa Barbara channel. It is 30 miles long and averages five miles in width, running in a direction nearly due east and west. Being only some twenty-five miles from San Pedro harbor, it has long been used as a safe resort for the hide-dryers, who frequented the coast of Upper and Lower California as far back as 1824, and who made it a "locale" for the purpose of curing and preparing hides for the long passage, in those non-clipper days, around Cape Horn. The old vats that were formerly used for salting are still plainly visible, and some of the captains who used to frequent the island are now residing in San Francisco.

The appearance of the island, as viewed from the sea, gives, at first, the impression that there are two islands. This is caused by a large body of water entering into the center of it, making it a bay and one of the finest harbors on the coast south of San Francisco. It would almost seem that nature intended this bay for a naval depot for the defence and protection of the lower coast of California. At the head of the harbor a level isthmus connects the two higher portions of the island, making it a most desirable place for military barracks, storehouses, parade ground, forts, etc.

This beautiful location has already been taken up by the United States Government, and is now occupied by Federal troops, who are encamped there. The other portions of the island present the usual aspect of mineral districts—high-peaked hills, with spurs jutting from them. The out croppings show abundant varieties of quartz, soap stone and other kinds of minerals, as galena, copper, silver and gold, as well as iron.

About twelve months ago, some sailors engaged in putting ballast on board a vessel at the island, discovered in some of the rock appearances of lead. A small lot of this was sent to San Francisco, and was found, upon assay, to be rich in silver. This led to several parties proceeding thither, prospecting and taking up claims, and there are now over two hundred mines being worked in various ledges. The veins run across the island—that is, nearly north and south. On the western portion, galena, with silver, are the predominating ores to the average depth of 25 feet; below that, the galena disappears, and silver ore takes its place, assaying about $100 per ton. At the eastern part of the island copper ore is found, consisting chiefly, as far as ascertained, of the oxides and blue carbonates, specimens of which may be seen at the office of J. W. Merrill, 536 Clay street. There has not been much prospecting in this vicinity, but the developments so far indicate great richness. There is wood enough for miners' purposes, and several springs of excellent water have been found, besides which good water can be readily obtained by boring. The climate is similar to that of Los Angeles—mild and salubrious. Lying so near the coast, and so easy of access, the cost of living is about as cheap as in San Francisco. Freight is low, and the passage occupies but a short time, at an expense of from $15 to $20.

Amongst the mines now in operation may be mentioned the Argentine, situated about 200 yards from the coast. This vein is perpendicular, it being 18 inches in width at the top, and at the depth of 25 feet measures 36 inches, with a regular increase. The ore from this mine is said to average $100 per ton, by assay. The Rose Matilda is also a good mine. The ledge is five feet in width, and although the farthest from the shipping point, its value is greater in proportion. It shows a fine vein, sometimes of pure metal. The Charter Oak is also a good claim, and has a tunnel now 69 feet long. The width of the vein is five feet three inches, consisting of white quartz, thickly interspersed with the finer metals. Other mines may be noticed as pre-eminent—viz: the Gem of the Ocean, Gould & Curry No. 2, North Star, Shining Star, True American, Crystal, Jannett, Monster, Wellington, Diamond, and others. Several lots of ore, from various mines, have arrived in this city, to be re-shipped to Swansea, Wales, where the cost of extracting the metals is only from $3 to $4 per ton. Good advances have been made upon the ore by a firm in San Francisco.

The facility of extracting and cheapness of transport to this city, together with the richness of the ore, salubrity of the climate and easy access, must undoubtedly render this island very attractive, and the prospects are fair that it will be a powerful rival to the far-famed district of Washoe.

As is always the case in new mining districts, there are some men, pretending to be prospectors, who never stop long in any one place, and who give out discouraging reports. Such men expect that all that is required is to say "Open Sesame," like the robbers in the Arabian Night's tale of Aladdin's lamp, and that the talismanic name will bring the riches of the earth to its surface. They go; take a look; stop a day or two, and return naturally disappointed, as they deserve to be anywhere; they report all a humbug; the newspapers pick it up as a good item (?); stockholders read the article; get timid; dodge assessments in some manner, and thus many really profitable mines lie unworked—all this on account of some wandering, purposeless prospector, who is seeking indefinitely for something to turn up, without putting his shoulders to work out the truth.

C. P.

[Written for the Mining and Scientific Press.]

Letter from Reese River.

Messrs. Editors.—At the close of my last letter we were on Oregon Hill, in the Austin Cañon. A short distance west of the Oregon and North Star ledges are the Isabella and its eastern extension. Both claims look passably well, and work is now being prosecuted on both. The Troy is not more than 100 feet from the Isabella. The incline on it is about 40 feet in depth; the width of the ledge 10 inches. In the course of testimony elicited in a recent visit between the Oregon and Isabella companies, some witnesses were of the opinion that the Troy was merely a spur or slide, while others considered it a ledge. If it is only a streak, it is a rich one. The Florida, which has been before the San Francisco Stock Board for some time, has an incline to the depth of 90 feet. Its ledge varies in width from one inch to two feet. Workmen are now engaged on one of its shafts. The Magnolia has a shaft sunk on its ledge, which is about two feet wide, to the depth of 60 feet. The Black ledge and the Cincinnati are about to have war—in a legal way. The S. A. Douglas has a ledge of four feet in width, and an incline on it to the depth of 60 feet. The Morgan and Muncey has a ledge two feet wide and a shaft sunk to the depth of 145 feet. This ledge is considered one of the best in the district. Though the ledge makes some queer curves and angles, it continues so far a well defined ledge. There are only 400 feet in the Company's claim. About one year since a speculator agreed to furnish a mill for a one-fifth interest in the claim, depositing $12,000 as a bonus for the performance of the contract. When the ledge "pinched," he hastily concluded the speculation would prove a failure and failed to perform the contract. He thus retired from the Company minus $12,000.

A short distance from the Morgan and Muncey is the Die Vernon. It contains 800 feet, with we know not what depth of shaft, as it appears to be caving. Its ledge is, we understand, two feet wide. The Diana shaft is very close to the Die Vernon, and the ledge is generally believed to be the same. The Diana, being the older location, will be likely to get the Die Vernon's. The Seymour has a shaft upon it to the depth of 50 feet, and a ledge two feet in width. It appears to be well defined. The Parrott's ledge is four feet wide and the depth of its shaft 60 feet. The Diadem has an incline on it to the depth of 30 feet, its ledge being three feet wide. The Chippewa ledge is two feet in width; work done on it, inconsiderable. There are many other ledges or streaks in the vicinity of those we have mentioned, but no great amount of work has been done upon them.

The quartz of the ledges in the vicinity in which we have been strolling is of a blackish color, considerably rusted. As the water line is approached, which is usually at the distance of 75 feet, it changes its character, and for a time the rock yields scarcely any pay. If the ledge does not run out, and work is continued upon it, the rock becomes grayish black, like the Gould & Curry. This rock is very rich, showing sulphurets and even the sulphate of silver in abundance. Some of the rock from the North Star ledge will work $5,000 to the ton. The Mills, Post and White Consolidated are still in litigation with the Black Swan Company. These claims are on Austin Hill, as are also a few of the claims mentioned above. When next I write I will speak of them more fully, as also of the characteristics of Austin Hill ledges as compared with those of Oregon Hill. The weather has moderated much within the last two days. Everybody is gay.

X.

Austin, N. T., April 9th, 1864.

[Written for the Mining and Scientific Press.]

Owens River.

Messrs. Editors:—I have been a constant reader of all the papers published in this city for years and I find that in every paper the first thing that attracts the reader's attention is an article with a conspicuous heading, something like this:—"Reese River Correspondence," "Letter from our resident Correspondent at Owens River," "Rich and Extensive Mines found in the Desert District," "Big Strike at Aurora," etc.; and so on through the whole catalogue of mining country from Boise River to Mexico, showing most conclusively that mining is the legitimate business of the country.

We have indubitable evidence that the entire Pacific Coast from the Russian Possessions to Mexico is one continuous mining country. This fact appears to be fully realized in Europe, as well as on the American Continent. It is only within the past four years, or since the discovery of silver and copper, that the people of our own Coast began to realize the fact that our mines were a permanent thing. Until a comparatively recent period it has been the prevailing opinion of a majority of our people that the mines would soon be worked out; hence the difficulty of getting capitalists to engage in the business. But the developments which have been made the past four years, extending all through California, Nevada, Idaho, Utah, Colarado, and New Mexico, have caused every thinking man to exclaim, "The half has not yet been told."

My particular purpose in the present communication is to place before your readers some of the many advantages of the particular section of country with which I am more particularly acquainted, viz: "Owens River." I have been a close observer of all that has been said and written of all the several localities named; have talked with men from all of them, and have seen and traveled through much of California and Nevada Territory, and I must say that, in my opinion, Owens River presents more advantages to the capitalist than any other district. The climate is unexceptional—neither too cold nor too hot. For agriculture there is no better locality; the valley is extensive and the soil good, with a rapidly improving market for produce.

The mines are second to no other locality, for extent, and richness; and a water power will soon be supplied by the Owens River Canal Company, which will be equal to all demands if it should reach to five thousand stamps. This company made their first location in July, 1862, and have followed up their enterprise ever since, with that energy and industry that men only would do who had an eye to the future greatness of the country and the importance of the franchise they were soliciting. Although this company held the oldest location of water, and had their records duly made in both Tulare and Mono counties; in order that there might be no question of title, they went before the Legislature and procured a charter act, guaranteeing to them the full benefits to be derived from the improvements which they propose to make in the river, in the way of widening it suitable for logging, etc. This franchise secures to the company the key to the lumber business of the country, and will moreover enable them, as soon as their works are completed, to greatly reduce the present cost of lumber in that section.

When we examine the statistics of Washoe, showing the amount of lumber and wood consumed, some idea may be formed of the value of such a franchise.

Although the Company, as it is right they should, will receive the first benefit from this enterprise; it is nevertheless the only way in which the resources of the country can be properly and economicaly developed. The result of the enterprise will be to bring down the price of lumber, to open up a system of canal and river navigation throughout the entire valley, and to furnish an inexhaustible supply of water for irrigation and for mill power. By the aid of this cheap power, $20 rock will be made available, while $50 will not pay expenses now. Three times as many mines will be made available by this water, as could ever be wrought by the more expensive employment of steam. The best evidence of the estimation in which this region is held, is seen in the rapidity with which the mines and valley are filling up with new comers.

Mono.

April 18th, 1864.

The exports of the finished manufactures of England were in 1840 of the value of but $180,000,000 In 1863 they were $410,000,000.

WASHOE STOCK MARKET.

Review of the Week Ending April, 18, 1864.

Transactions in the Washoe Stock Market are mostly confined to Gold Hill and American Flat. We are indebted to the Gold Hill *News* for the chief portion of the following review:—

American City. The bidding on this stock has been very fluctuating, ranging from $1.50 to $5, with sales of 25 shares on Wednesday at $5¼, and 20 on Friday at $2.75 to 3.75.

Twenty shares Arizona sold at $11.50@12, being the steady figures of the preceding week. Arrington sold at $3.

On Atlas the bidding has ranged from $1@2.50, and on Argo, $4; Alpha, $600; Atlantic, $2; but no takers at those prices.

Forty shares Amador sold yesterday at $1.50@$1.87; thirty-five of Andes at $4.

Allen has been steady at from $25 to 28.

Burning Moscow has found buyers at from $86@95; for Beaver 27 was offered and refused.

Twenty shares Baltimore American sold at $46@50, the latter figures being refused on Thursday.

Twenty shares Branch Mint sold at $18.50 to 19 on Monday; $20 was bid subsequently and refused.

Twenty shares Bullion were sold on Saturday at $40 cash, and ten shares at $100, b. 30 d. Since that time $75 has been freely offered, but refused.

Ten shares Belle Vernon sold at $5.

For Cherokee 50 cents, Croesus $75; Crown Point Ravine $6, Combined Effort $8, Caledonia Tunnel $22, Central America $7, Consolidated $35, was bid; but no takers.

Thirty shares Clinton & Hubbs sold at $25@26; Crown Point Ravine found buyers at $6.50.

For Colorado $6, Crescent $5, Coppers $10, Cincinnati $2, was bid and refused.

One hundred and fifty shares Challenge sold at 50 to 75 cents.

Twenty shares Diligent sold at $4.50@5. Twenty Dou Carlos, from $5@8.

Effiugham advanced from $2 to 5, with considerable business, but dropped on Monday to $3; 380 shares have changed hands. Fifty shares of Empress changed hands at from $25 to 28.

Thirty-nine shares Fraukell sold at $8 to 11; ten shares Great Eastern at 50 cents. The *Union* reports a sale of 5 shares Great Eastern on Saturday at $5.

Gentry declined materially from its quotations of last week, having sold on Friday as low as 50 cents per foot, but advanced to $3¼ on Saturday.

Globe was in demand throughout the week at $13, but holders were not disposed to sell at that figure.

Golden Horn holds its own, 40 shares having sold at $5@6.

Sixteen shares Golden Eagle No. 1 sold at $7½ to $12.50.

Harrold & Argo, which sold last week at $13, has declined materially. Sales of 63 shares are quoted at $8.50 down to $5; closing at $6.

Five shares Imperial sold at $185; 100 Joe Jackson at $5@15.

Gould & Curry found a buyer on Monday of six shares at $4,600 per foot.

Four hundred and fifty shares Jewett & Shepard sold at $40 to $25, closing at $20. Jenny Lind has advanced a trifle; sales of one hundred and sixty shares being quoted at $3@4.

Sixty shares John A. Logan sold at 25@50 cents. Jim McClellan has sold at $1@1¼; Irving at $3.

Twenty-five shares Johanna sold at $4; 15 Keystone No. 2 at $5.50@8.50; 15 Kentucky at $5@5.50. King Solomon has met with large sales at declining rates, ranging from $4¼ to $2, and closing at $2½.

We quote Keystone No. 2 at $8; Kossuth at $10@14; Kentucky at $5; 35 shares Legal Tender at $15; 10 Lafayette at $13; 60 La Mina del Alto at $2@5, closing at the former figure.

We quote Lady Bryan No, 2 at $1½; 25 shares Miantonomah sold at $10@12; two of Mary Ann at $115; 50 Mother Lumpkins at $2.50; 40 Mayflower at $3.50; 10 Michigan at $35.

Milton has met with uniform sales at $25.

Napoleon advanced steadily till Friday with sales of 189 shares, closing on that day at $18, but dropped to $11 on Saturday, with sales of 55 shares at that figure.

New Oregon has met with considerable business, 165 shares having changed hands at fluctuating rates ranging from $8 to $18½, and closing at $14.

Forty shares of Northern Light changed hands at $2@2½; Nightingale has changed hands for $30@36.

Nevada was steady through the week at $18, with sales of 165 shares. It declined a trifle on Friday, 25 shares selling at $16.50.

Forty-five shares Oneoto have sold at greatly fluctuating rates—from $7½ to 17. It found a seller at $7½ on Saturday, and a buyer at $17 on Monday.

One hundred and eighty-five shares Pride of America sold from $8 to 14.50, closing at $8.

Sixteen shares Palo Alto sold at $3@4.

Pontiac advauced from $1.50 to 8, with sales of 47 shares at figures varying betwcen the extremes.

One hundred and twenty-five shares Roman Eagle sold at 50 cents.

Ninety-five shares of Richelieu sold at $6@9, closing at $6; 10 shares Rock Rose at $14.

One hundred and seventy shares Rock Island at at $26.50@45, closing at $37.50.

For Sweezy $50 was offered and refused.

Silver Vale was steady at $6@7, with sales of 40 feet.

One hundred and forty shares San Francisco sold at $2.50@4.50; Shelton, 5 at $6; Scott Consolidated, 5 at $1½.

San Francisco (Virginia District) sold at $5.

Sixty-five shares Tontine sold at $5@11; White & Saunders at $4; Winnegardner at $4¼; Wm. Penn, 30 shares at $15@22½; Yuba, 190 shares at $4½@5; Yolo, 9 at $14; Young Company, 30 at $1@3; Virginia Hill, 25 at $1½.

Uncle Sam found a purchaser on Monday of two shares at $1,025.

Record of New Incorporations.

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Colonel Baker M. Co., Lyon county, N. T.; E. H. Gates, Geo. H Hopps, Alex. Macabel, F. W. Hopps, J. M. Lareo.

Gold Hill Tunnelling G. & S. M. Co., Storey county, N. T.; S. T. King, A. de Tavel, P. Torre, P. G. Venard, Chas. Sutro.

Thornburn G. & S. M. Co., Alpine county, Cal.; Thos. Thornburn, Wm. H. Allen, S. W. Nauson, John Hancock, John Victory.

Argentine M. Co., Santa Catalina Island; Robert McMillan, E. R. Carpentier, John M. Birdsall, Geo. H. Ensign, Cortland Wood.

Bromedary Quartz M. Co., Nevada county, Cal.; J. O. Hanscom, G. C. Ring, Samuel Paul, A. B. Cranston, Herman Camp.

Pony C. M. Co., Placer county, Cal.; J. R. Nickerson, J. E. Freeman, D. B Goode.

Cayour M. Co., Lander county, N. T.; G. H. Pigne Dupuytren, S. Haine, Joseph Haine.

Owens G. & S. M. Co., Mono county, Cal.; John B. Owens, J. B. Leavett, Warren Holt.

Munroe S. M. Co., Tulare county, Cal.; D. H. Mitchell, John J. McBride, W. B. May.

Ida May M. Co.; same as above.

California Manganese M. Co., Marin county, Cal.; J. Van Arman, J. F. Miller, T. A. Blake, Winslow Baker, E. J. Loomis.

Hudson Mining, Lumbering & Prospecting Co., California, New Mexico, Nevada and Arizona; Robert Crouch, E. L. B. Brooks, J. Fowler, A. F. Tilden, Wm. Muldrow.

Pacific M., L. & P. Co., locations as above; P. L. Edwards, John Fowler, E. L. B. Brooks, Wm. Muldrow, Wm. G. English.

New York M., L. & P. Co., locations as above; E. L. B. Brooks, J. Fowler, Wm. Muldrow, Isaac Murray, Wallace Everson,

Cocomungo M. Co., Eureka district, Arizona; Eugene Crowell, C. Spencer, J. H. Reichert, J. R. Jarboe, S. S. Knight.

Original Buckeye M. Co., El Dorado Canon, Arizona; J. E. Marchand, Hall McAllister, Peter Banta, A. Schiller, L. Parsons.

Queen of the Mountain S. M. Co., Nevada Territory; O. M. Perkins, Jerome Ackerson, Benj. Fowler.

Rosecrans S. M. Co.; same as above.

Ophir G. & S. M. Co., Boise county, I. T.; D. W. Taylor, F. A. J. Diss, J. Tyler Carr.

Tecumseh G., S. & C. M. Co., Calaveras county, Cal.; J. A. Reichert. T. Helmken, Chas. Buer, A. Himmelman, M. Fenstermacher.

Mining Gossip.

EDITED BY.....FRANK WARDWELL.
FOR THE MINING AND SCIENTIFIC PRESS.

How Some People Get Rich.

To illustrate how some people "fall into," as you may term it, immense fortunes, and then take unto themselves the false notion that the same was caused by their good business qualities and shrewdness of character, we will state an instance within our own knowledge which took place in this city recently. The circumstances are these: A hard-working, industrious mechanic, with very ordinary intellect, had, after three years of hard labor, managed to accumulate the sum of from $1,000 to $1,500. One day, in the course of conversation with an acquaintance, who was the possessor of more brains than he had money (for, to tell the truth, he was a broken-down personage, although possessed of great hope for the future), he remarked that he thought if he could procure the sum of $1,000 he could invest it in a good operation, in the way of a mine, which would, eventually, make them both very rich. The capitalist (for such he was in this case) could not, at first, see the point; and the fact of the matter was, he thought stocks were almost too *permanent* an investment for his money. However, after much consideration and argument on the part of the person who would have him invest, he at last assented, forgetting to obtain anything in the shape of a written document to show that he had loaned the amount, or even given it in trust as an investment. Well, the money was all duly used in the mining project, and nearly a year rolled on and no sign of the loaner either obtaining his principal or even interest on the money, for it was understood mutually between them that the money should draw an interest. One day he came boldly forth, and said that he wanted his money out of the affair; that he was sick of mines, and commenced to cry like a child. The operator told him it was no use to act in such a childish manner; he knew that the money was now in *terra firma*, and he must wait until the enterprise repaid it; it would not do to abandon their undertaking now, and, furthermore, he said, "I don't know that you have any money in the mine, or that you can prove either that I ever borrowed any from you; so it will be useless for you to commence any action to recover the amount." So off goes the loaner, almost broken-hearted, lamenting his fate, and, seeing no recourse, came to the wise conclusion to put the amount down to profit and loss account. About three months after the conversation took place, the loaner of the money received a note, stating that his friend had struck it very rich in the mine, and shares could be sold in the market for $400. The loaner started the next day to where the mine was located, saw his acquaintance, who greeted him with a smile, recalling to his mind the fact of how foolish he desired to act a few months ago, and at the same time presented him with an order upon a banking house in this city for the snug sum of $36,000, with interest on the borrowed money, being his one-half share of the investment. Now he lives in a splendid residence, drives his team, and you will see this same individual, the loaner of the money, strutting up and down our thoroughfares, deeming himself the "observed of all observers," often saying, in the course of conversation, what a thing it is for a man to be a shrewd, careful operator, like himself, and to know what to invest in, and how strange it was to him to witness so many poor people in our midst; when, if it had not been that he was compelled by force to remain in the enterprise, he would, in all probability, have been as poor, and in as miserable a condition, as before. There are hundreds of just such cases we could illustrate if we desired to.

PACIFIC GLASS WORKS.—This company filed a certificate on the 19th inst. for an increase of their capital stock from $50,000 to $150,000.

FOOD FOR THE MINERS.—Over 2,500 head of sheep passed near Aurora, bound for Reese River, during the first of last week. We doubt not but that they will receive a cordial welcome by the miners in that locality.

DID NOT AGREE.—The jury in the case of the Savage Company *vs.* North Potosi, did not agree, and were thereupon dismissed. We learn that they stood eight for the North Potosi and four for the Savage. As soon as the news reached the city, up went North Potosi to quite respectable figures.

ANOTHER ACCIDENT.—Mr. J. W. Parker, a large owner in the Antelope mine, Esmeralda, was instantly killed, while at work in the lower shaft of the mine, by the caving in of earth upon him. He was sixty-one years of age.

MILL DESTROYED.—On the afternoon of the 16th inst., the Gould Quartz Mill, Virginia, was totally destroyed by fire. Loss estimated at between $40,000 and $50,000, with only $5,000 insurance. The owners of the mill are Messrs. Carver & Stanchfield. The fire caught in the wood room, situated directly in front of the furnaces.

HOMESTEAD ASSOCIATION.—The articles of incorporation of the Metropolitan Homestead Association were filed on the 20th inst. The capital stock of the Company is $7,200. The Trustees are A. Crawford, W. Hollis, E Barry, W. Irvine, S. Selliek, J. McGuirk and J. Clark.

BETTER.—Mr. W. P. Denekla, President of the Pacific Board of Brokers, we are pleased to state, continues to improve, and says he hopes to be among his many friends again in the course of two weeks, at the furthest. We trust his hopes may be realized.

FAILURE.—During the week another one of our leading brokers had to suspend payment, owing to unlucky speculations in Real del Monte and Lady Bryan stocks. The party in question is a smart, hard-working, energetic business man, and we always feel sorry to chronicle the misfortune of a person possessing such good qualities.

QUITE A SALE.—A sale of two hundred feet in one of the sub-divisions of the renowned Moss lead, situated in the Colorado country, also two hundred feet in a neighboring claim, is reported as having been made to a company in Philadelphia, for the sum of $55,000. We give the rumor for what it is worth, as there is nothing authentic known concerning the transaction.

ELECTION.—At a meeting of the stockholders of the Bullion Mining Company, held at Virginia City, April 15th, the following gentlemen were duly elected: S. T. Gage, President; R. C. Chappell, J. W. Mickey and D. C. Benham, Trustees; J. M. Walker, Superintendent; Messrs. Paxton & Thornburgh, Treasurers; B. W. Tomlin, Transfer Secretary (606 Merchant street, S. F.,); G. W. Hopkins, Secretary.

BUCKEYE.—On the 19th inst. this stock showed a decided improvement in the Boards in the way of price, on account of the result of 229 lbs. of their ore worked, which gives a return at the rate of $54.78 per ton, and a fire assay of $113.54. The Superintendent states that they have plenty of this description of ore, and that the mine is in the very best condition.

LADY BRYAN.—The superintendent, in a letter received here, by the company, on the 22nd instant, says he has struck a body of quartz of a very good character. The main drifts have also improved, the quartz being of a much better quality and the rock much harder; therefore, they will not be able to make such rapid headway as heretofore.

ANOTHER POWDER HOUSE.—A fine building of stone, for a powder house, is being erected on the Protrero, just beyond the Rope-Walk. The building will be two stories high and 30 x 50 feet, capable of storing 25,000 kegs of powder.

FORGERY.—Two well known detectives of this city might have been seen by the close observer, hard at work on the afternoon of the 20th inst., "working up" a case which had been placed in their hands for detection. First you would see these shrewd worthies dart into one brokerage establishment, then into another, until our hump of curiosity became aroused, and from the fact that they confined their enquiries to brokerage concerns, we came to the conclusion that it must be in our line, so off we started for an item, which we obtained after much cross questioning and plenty of Yankee inquisitiveness on our part. The facts are these: In the morning session of the 1st Stock Board a certain broker purchased ten shares of Lady Bryan; after it had been delivered to him, he sent it to the Company's office to have it transferred, when the Secretary returned it, pronouncing it a forgery, and thus the detectives were trying to work the case up by tracing the different sales and purchases down from one to another.

Since the above was in type, we are given to understand that several more certificates of the same stock have been discovered as being forgeries. It is thought that there are still a large quantity of a similar nature afloat in Virginia City. They have not, as yet been able to discover the rascally perpetrators.

STOCK TRANSACTION.—G. F. Whiteman *vs.* G. Peck. The plaintiff in this case alleges that on the 1st of May, 1863, the defendant loaned him the sum of five hundred dollars, for which the plaintiff gave his promissory note, payable within six months, in United States gold coin or legal tender notes at their market value in San Francisco, with interest from date at the rate of two per cent. per month, giving one hundred shares of Owens River gold and silver mining stock as collateral security. Whiteman transferred to Peek thirty-seven shares of stock in payment of the note given for the money borrowed, reserving for himself the right to redeem the same within ninety days, at the rate of $20 per share. The plaintiff alleges that Mr. Peck, before the expiration of the ninety days, disposed of the stock for the sum of $78 per share, and was therefore unable to return the stock when demanded by plaintiff, who now asks the court to award him damages for $1,295.

FIRST MILL.—Messrs. Ogden & Tichenor, of this city, have completed their arrangements for the erection of a quartz mill at Goodwin City, the seat of government of Arizona Territory. The mill is of twenty-five horse power, and was shipped during last week, under the superintendence of Mr. Noyes, for the mouth of the Colorado river, whence it will be at once taken, per steamer, up the river to La Paz, and from thence to Goodwin City by mule teams. As soon as the mill is placed in running order, it will commence on the rock taken from the "Benedict" mine, which is said to be unusually rich, both in gold and silver. They expect to get the mill under thorough headway by the last of June.

GIVE THEM A CALL.—In another portion of our to-day's issue, will be found the card of Messrs. Davenport and Smith, who have entered business as Mining and General Accountants, Scriveners and Conveyancers. Mr. Davenport is too well known to the business community to require any assurance from us, as being one of the most thorough and practical accountants on the Coast. Mr. Smith is recently from the East, and a gentleman well versed in the different branches of the law. We take pleasure in recommending these gentlemen to those who require such service as theirs.

SICKNESS.—Many of our brokers, in town, during the past week, have looked decidedly blue and sadly troubled and affected with the unpleasant disease so well known to brokers — that of "selling short.", Many of their contracts having fallen due at the wrong figures to suit their calculations for placing a snug "pile" in their pockets—the reverse having been realized, instead. Cheer up, "nothing venture, nothing win."

Mechanical Department.

[Written for the Mining and Scientific Press.]

More About Generating Steam.

Messrs. Editors :—In "An Euquirer's " first eommunication we had the presentation as posing queries, of suppositions long established as practieal developments ; in his late effort victories and exultations over self erected effigies, out of sight of the true position. Not heing stragetieally inelined, nor quite strickeu with a poverty of polemie resources, I must be exeused from either imitating or following these manners.

Let us see whether it is "An Enquirer " or myself that keeps nearest to the " text." The notiee of " au improvement iu geuerating steam," which called forth my first eommuuieation on the subjeet, contained the following statement: " The object of the iuvention is to effect a saving in the use of fuel. The principle upon which it is based is to expose as much water surfaee to the fire as possihle." The artiele farther stated that the water is raised to a temperature near steam heat before entering the boiler, and that the inventor caleulates to produee a a hundred per cent. more steam, with an equal amount of fuel, than can he generated by any other mode. To all of which I answered, that the idea was, in the face of the present perfection in boilers, simply absurd. It was sufficient for me, in consideration of the avowed principle, to know the general plan of operation, to boldly decide upon its feasihility. It was plainly a projeet to present an extra surfaee of water to the aetion of *the fire*, in raising it to a given temperature, by two separate modes of heating, which iu view of boilers being used after all, would be equivalent to corrugating the surfaces of boilers of the same *general* form and eapaeity exeept the advantage in *time* of produeing steam. I made no attempt to toueh upou the particular forms of boilers, because all possible geometrieal shapes, have been tested, both in regard to surface relations and general form, and, also, beeause there was no declaration of the substitution of a form different from auy now in use. I again referred to the surface of water exposed to the fire, in my second communication, in speaking of the " form of surfaee, by eorrugation for instance," in hoilers of a given capacity. This " An Enquirer " perverts into meaning a difference in the general shape of hoilers, which is no where dedneible from any of my assertions. In the oval style of boilers there is a large surfaee of exposure presented to the fire, but not to its most direct influeuce, aud the gases too readily escape. In the tuhular flue hoiler the flames are subjeet to confined and prolonged contaet with the surface of exposure, whereby gases are lost through imperfeet eombustion. Beneath a flat-bottomed boiler freely exposed to a single sheet of flame, it is claimed that the combustion is the most perfeet of all, aud that by careful management of the fire there need be but little loss in the use of fuel. Time is a necessary ingredient iu buruing fuel, and the entire problem of economising furnaee heat, aside from the eare of the fire and prevention of radiation, would seem to lie in that general shape of the boiler that shall seeure free eomhustion and direct moderate eontact with the flames so long as that combustion is taking place. Couplieate the operatiou with a network of extensive absorbing and rapidly eonducting mediums and their results and interferenee with the neeessary euergy of the area of eomhustion — the gases and particles of earhon are cooled and carried off hy the dralt. No simple increase of the surfaee of water exposure in the above mentioned, or any other forms of boilers, ean cause greater eombustion of fuel or eventual absorptiou of heat with the same fire. Let " An Enquirer " even theoretically demonstrate that any arrangement of a greater surface of water exposure and half the fuel uow used can produee results equal to those that are and can he brought about without present improved hoilers. Surely, if such a thing can be done there should he no delay in properly honoring the capable genius.

In speaking of the hetter couduetion of a diminished quantity of steel over iron, in boilers of the same capacity, I made no allusion to its superiority in regard to a fixed quantity of fuel, but in the following sentences intimated that any one able to prove that rapid eonduction through solid matter ensured more perfect comhustion of fuel, could adapt the same principle to stoves, cooking utensils; etc. But " An Enquirer " dodges this substantial argument against his pet fact, with an amaziug adroituess, by misinterpreting the first sentence and very conveniently failing to diseover the meaning of the others.

Again " An Enquirer " rejoices over what appears to him to be a eontradietion betweeu my statemeuts regarding electro-magnetie power, when there is nothing of the kind shown. Fully aware of the difference in material upon which mental and physieal impressions must operate, I will elueidate the subject more at leugth. Iu my reference to the power of eleetricity, I spoke of the large sum of its isolated powers, when free to operate on material most easily affeeted by its lowest conditions of aetion, and when its influence is extended hy a depressiou of force equal to the capacity of that material—such being the result of feeble currents of electricity operating on animal tissues. This I contrasted with the electro-maguetie force engendered by an equal quantity of electricity, showiug that not only concentratiou, but, also, magnetism, wastes and restrains the power of the eleetricity. Heat, force, magnetism aud electricity can ouly powefully act hy one or more series of concentrations, whether they flow from, or into, ten or a thousand channels ; one axis or fulerum of power must support and regulate the strength of the entire work. The invention I eriticised, claimed to apply eleetrieity allied with maguetism, aud by extending the area of reeeptiou to increase the power of a given current—a direct eontravention of the laws of electro-magnetism. Unlike electrieity, eleetro-magnetism ean have no choice of materials, and must limitedly operate through the one main ehannel, whether its energy be weak or powerful. But that energy must possess high eoncentration to operate at all. The natural restraints of power would be illustrated if " An Enquirer " should attempt to blow a few staves of music through a headless flour barrel or to burst a boiler with a few energtie expenditures of breath ; in either case he would prohably fail, because the power exerted could not overeome the extent of surface or strength of materials. But if he should naturally give the same impulse of wind to a penny trumpet, the conduetiug eapacity of the latter would be iusufficient for the pressure exerted. An undue quantity in eleetricity appears to he converted into heat, and an electromagnetie eurreut urged heyond its limit gives rise to a counter current : the heat radiates and is lost, the opposite eleetro-magnetic currents nullify each other, aud theu are, perhaps, lost as heat.

" An Enquirer " is anxious that I should throw up " the sponge." Only let him persevere, and if he eau succeed in getting me to swallow any of his artfully arranged argumeuts, I shall, probably, afterwards throw up something liko a " whale." From the above mentioned elassical allusion and other sigus, I should judge that " An Enquirer " had become the confused champion of superficial extensions under a high pressure mistake. Allow me to inform him that the *great* improvement in generating steam is not a prize-ring affair, although somehow connected with the Gould & Curry *mill*, nor is the Boiler-makers *strike* a complication thereof. Men of an enquiring turn of mind are. unfortunately, often immolated upon similar errors aud disappointments.

E. A. M.

Explosion of Steam Boilers.—There exists in Manchester, England, an asseciation of engineers, who earefully inspect the boilers of all parties belonging to the asseciation, and make every possible effort to antieipate and remove any danger of explosion. The association, furthermore, earefully survey, hy experts, every disaster which may oecur to hoilers outside of their organization, as well as those oeeurring to boilers under their immediate charge. From a tahular statement, iu the London *Engineer*, of the boiler explosions which oeeurred in Eugland during the year 1863, it appears that of the thirty-six explosions only *one* oecurred among the boilers under the direetiou and eontrol of this association, and this was considered an exceptional case. On enquiry into the causes of the explosions which occurred to hoilers ottside of the immediate supervision of the association, it appeared that the priucipal eause of disaster was corrosion—chiefly external. It further appears that this eorrosion was often attrihutable to damp or " sweat," as it is technically termed, from between the walls in which the boilers were set, and their outer surface. Fully one-sixth of all the corrosions was traeeable direetly to external eorrosion! Only two were attributable to excessive pressure. and four from seareity of water. It would appear from the above that very little importance can be attached to the numerous aud ingenious scientifie theories that have, from time to time, beeu suggested by careless, theoretical observers, hy way of explanation of this class of aeeidents. There can be little question with regard to the capaeity for judging, or eloseness of observation on the part of the experts of the asseeiation above referred to. A eareful and candid eonsideration of this matter on the part of maehinists, is of much importanee on this eoast. Why cannot California organize a similar asseeiation? The use of steam is destined to heeome more important here than iu any other portion of the globe eontaining an equal populatiou. Will not some of our leading maehiuists make a move in this matter?

Artificial India Rubber.—The name of Campticsu is given to a new and valuable suhstitute for India rubber. This remarkable substance is formed by the oxidation of linseed oil. Plates of glass are dipped in tolinsced oil and allowed to dry. The plates are again dipped aud dried, until a sufficient film has aceumulated, and then it is removed. The inventor states that by erushing the oxidized oil obtained in sheets, and working it thoroughly in hot mixing rolls, he found that a substanee was produced which exists so strongly in India rubber. The addition of a small proportiou of shellae gives this property forming a material singularly like eaoutehouc when worked into dough, and which can be rolled on to fahrics in the same manner and with the same faeility. Pigments can easily be added to give color; and the addition of resins impart other and rathe varied proportions of adhesiou useful in affording the means of uniting fabries as hy ruhber. Not only has this siugular product heeu thus assimilated to rubber for uses ou fabries, or combined with fibre on floor cloths, bnt is capable of being worked with pigment and vuleauized exaetly like India rubber, forming a hard eompound like vulcanite or ehonite, excepting that uo sulphur is neeessary.

Power of Endurance.—An intelligent writer in the Washington *Chronicle*, says that the greatest power of enduranee of sueh hardships as belong to a soldier's life helong to men over thirty-five years of age; that men from eighteen to thirty are ten times on the sick list where those older are only once; that the records of the hospitals around Washington develop the fact that aside from surgical cases, the patients there under thirty five are as forty to one over that age; consequently a sound man of forty, and of temperate habits, will endure more fatigue and bad treatment than one equally sonud at the age of twenty.

The friends of seienee in Chicago are taking measures to establish a genuine Museum of Natural History in that eity. Sixty-one gentlemen have subscribed $500 each towards a fund to found the institution.

The Humboldt Mines.

We condense the following items from the Humholdt Register of April 9th :

The " Sheba " workmeu have struek another rich lode in their tunnel. " De Soto " prospects hetter every day. " Franklin " and " American Basin " are bammering away at a rate which will soon bring them into notiee. " Star Tunneling Co." will start the tunnel this week, and if rightly managed will be a good investment. " Union Band " will resume work as soon as the weather will permit. Several old residents have returned from San Francisco, where they spent the Winter. They all seem pleased to get back, and anxious to get to work prospecting different claims. A stoek board was organized the 5th ; meetiugs open to the public. Workmen on the " El Dorado " claim are getting along finely ; new tunnel in 18 feet which will cut the ledge 130 feet below the surface, within 80 feet from present face of tunuel. Some fine looking speeimens of ore have been taken from the bottom of the shaft, 63 fect below the surface, where the ledge is five feet in width. Fall's mill is rnnning on " Moonlight " rock this week. Has not amalgamated any from the present lot. A pound of pulp taken from the vats, and assayed hy F. W. Blake, yielded at the average of $3,680 to the tun of rock. A trial of 2,500 lbs. of ore from the " Mars " ledge, made at Fall's mill this week, produced a handsome brick of 171 ozs., worth $140. Seventy-one pounds of rock from the Canada ledge, Trinity district, yielded a fraction over 17 onnces of bullion. Wells, Fargo & Co. shipped, on Monday, April 4th, two. hricks, 576 ounces of fine hullion, from three tuns of " Gem " ore; value, $650 40.

Patent Department.

New Separator.—Mr. Zenas Wheeler, whose amalgamating pan and separator has already made his name extensively and favorably known to the mining public of California, is getting up a new separator, operating upon a principle entirely dissimilar from his previous invention. We shall give an illustration and full description of this pan as soon as the necessary engravings can be prepared for the same. Application for letters patent for the same have been made through the Mining and Scientific Press Patent Agency.

Another.—Julius Cammann, who filed a caveat for an Amalgamator and Separator, a model of which was exhibited at the last State Fair, at Sacramento, has now applied for patent papers for the same, through the Mining and Scientific Press Patent Agency.

Ann Still Another.—Mr. Andrew Hunter has exhibited to us the model of a new Amalgamator and Separator, which consists of an improvement upon the shaking table. The shaking table is merely employed as the base of the invention; the machinery attached and the entire manipulation of the sands in this machine is altogether different from the old-fashioned table. The machine is quite novel and ingenious, and will doubtless prove effective. A working model may be seen at the Eureka Metallurgical Works, Commercial street, below Front. Arrangements have been made to put this invention to a practical test immediately.

The Newly Invented Safe Hook, of which we made mention last week, is highly spoken of in the Virginia papers. It is described as follows in the Gold Hill *News* of April 13th:

The hook is the invention of Mr. Frazer, a mechanic employed at the Fulton Foundry. It is composed of several pieces, which are fitted together in a manner different from those of any other hook which we have seen in use. The main piece of which the hook is composed is of a square bar of inch iron about ten inches long, which at the lower end is turned up in the form of a hook, or section of a circle. A piece of iron of the same size, but only four or five inches long, is attached to the side of this main hook by an iron clasp which extends around both these pieces, and is so fitted as to allow the latter piece to play up and down readily. The lower part of this latter piece is turned to correspond with the curve of the other part of the hook, and to which it is exactly fitted. It will of its own weight fall down and close the hook. To fasten the hook a piece of iron a couple of inches in length is added to the top of the sliding piece, which has a short turn or projection of about a quarter of an inch which turns in toward the shank of the hook. This piece of iron is attached to the other slide by a spring, which keeps it to its place and makes it appear almost as if it were a part of the same piece. When the slide is down and the hook closed the projection on this upper piece of iron snaps into a groove cut in the shank of the main piece of the hook, and no jar will unfasten it until it is taken hold of, pulled back, and the whole slide lifted up by hand. Attached to the hook is a chain and swivel, which is, in all, about two feet long, and is designed to connect the hook to the rope and allow the latter to twist or untwist without turning the car or bucket which is attached.

The opinion is expressed that this hook is safe, strong, durable and less liable to get out of order than any other, and that it must eventually come into general use. The numerous terrible accidents which so frequently occur from the inefficient or careless manner in which tubs are secured to the hook, seem to render any improvement in this direction a matter of great importance.

Extraordinary Speed.—The new ironclad ram Avenger, recently constructed upon an entirely new model from any vessel of the kind heretofore built, is said to have reached the extraordinary speed of 35 miles per hour. Her armament consists of a 100-pound Parrott and five 12-pounders. Her main reliance, however, is upon her prow as a ram, to which her great speed will give immense weight.

Improved Lightning Rods.—We last week alluded to some important experiments made under the direction of the Paris Academy of Sciences, going to prove the great superiority of sharp pointed over round or blunt pointed rods. Our attention has since been called to an important improvement in the main conducting portion of the rod. This improvement consists in making the rod thin and flat, instead of square or octagonal, as heretofore. M. Brittan, of Chicago, Ill., has suggested this improvement, and applied for letters patent for the same. This new conductor is simply the ordinary square iron used, rolled into a very thin plate, the entire length being made as continuous as possible, and wherever joints occur they are to be closely riveted. The tip is split, so as to form three separate sharp points, after the ordinary form. The continuousness of such a conductor, without any loose joints, must be a valuable feature, as compared with the joints usually employed, which often present most convenient breaks for the escape of the electrical current into the structure which the rod is designed to protect. The flat surface also allows of the rod being rolled up in a convenient form for transportation.

A California Invention Abroad.—The London *Mining Journal* speaks in high terms of Hansbrow's Double-Acting California Pump, and states that a very large number of them have been manufactured and sold in England.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analagous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented in the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and attidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in mito, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years	15
On every application for a design, for fourteen years	30
On every caveat	10
On every application for a patent	15
On issuing each original patent	20
On filing a disclaimer	10
On every application for a re-issue	30
On every additional patent granted on a re-issue	30
On every application for an extension	50
On the grant of every extension	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C.	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulched in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, Government House, corner Sansome and Washington streets, San Francisco.

Mining and Scientific Press.

W. B. EWER,.....SENIOR EDITOR.

C. W. M. SMITH. W. B. EWER. A. T. DEWEY.

DEWEY & CO., Publishers.

OFFICE in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL pay ments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:

Saturday Morning, April 23, 1864.

THE AMERICAN FLAG, which has made its appearance in this city the past week, is the neatest printed daily in the city. It is published every morning Sundays excepted, by D. O. McCarthy. It is the same size with the Evening *Bulletin*, but printed on much better paper, and contains more reading matter than any other paper in the State. The editorial department exhibits a marked degree of ability and vigor, and will not suffer by comparison with any of its cotemporaries.

LOUD TALK.—The De Soto (Humboldt) Mining Company offer to work a ton of their ore, against a ton of any ore in Nevada Territory, for a wager of ten thousand dollars. They want it *distinctly* understood that they make no exceptions in the case—so all companies can have a chance if they desire to test their ores. Well done for Humboldt. We admire the spirit, if it can only be carried out successfully.

RETIRED.—A. T. Dewey retires from the *Mountain Messenger*. He * * * * * made an interesting paper. If he is in the silver mining business, we hope his lode will prove rich. The *Messenger* has been removed to Downieville. [*Daily American Flag.*

Thanks, new and brilliant neighbor, for your good opinion. Can't say as to our lode, but we are bound to sink deep and drift wide for it. Modesty prevents our giving your item in full.

REAL DEL MONTE.—There appears to be no change in the mine from the last accounts received here by the company. Matters continue to progress favorably, and another shipment of $12,000 was made on the 20th, being the result of one week's run, with their mills not running very steadily at that.

ADVICE.—To rise from adversity to prosperity the ladder must be ascended gradually and with extreme carefulness; but the majority in their eagerness to reach the summit try to step two rounds at a time. when, lo! they tumble down headlong into the mire twice as deep as before.

WASHOE TREASURE SHIPMENT.—The quantity of bullion shipped by Wells, Fargo & Co. from Virginia, for the week ending April 9th, was unusually small; not quite reaching 3½ tons, and worth but $160,106.

NO MINING SALES need be published under the regulations of the new law, except for assessments ordered after the date of the approval of the Act, April 4th, 1864.

VALUABLE CORRESPONDENCE has been received from various contributors, a portion of which will appear next week.

MINING SHARE MARKET.

The share market for the past week has been unusually quiet, and exhibits a most marked falling off in the aggregate amount of transactions. The business of the board has been almost exclusively confined to a few speculative stocks, the most of which have been dealt in at fluctuating rates.

At the suggestion of numerous readers we have changed the plan of our sales report, and present it to-day materially condensed, and in a tabular form. This change gives us additional space for reading matter, and enables our readers to take a more rapid and comprehensive view of the business of the week, than they could possibly do by looking over the more diffusive report as heretofore given. The aggregate amount of sales for the week foots up at $659,186.

Opbir has still further declined. The latest sales were at $1,500; at the close $1,400 is bid, and $1,480 asked.

Gould & Curry is held firmly at $4,550; $4,400 is offered without finding sellers.

Chollar has advanced from $350 to 400, at which latter figure several sales have been made.

Burning Moscow has met with a material improvement and considerable business; 872 shares have changed hands at $100@110½, closing at $108.

Potosi has remained quiet; $825 has been offered with holders firm at $900.

North Potosi has still further advanced, with a large but somewhat fluctuating business. It closed last week at $61@65, reached $95 on Monday, receded to $70@75 at the middle of the week, but again advanced to $102 cash, and 107½, buyer 30 days, at last evening's Board.

Savage has remained quiet at the closing figures of last week. Holders firm at $2,500, with bidders at 2,400.

North American has formed quite a feature during the week. Opening at $154—a slight improvement—it gradually advanced, with a large business, until it reached $185, yesterday morning; closing at the evening's board at 177½.

Lady Bryan is still in large request. We note sales of 4765 shares, at from $44@57½—a slight improvement over last week. Still further favorable developments at the mine are reported. A quantity of forged stock has been detected.

Baltimore American has met with an important advance. Opening the week at $48, it has steadily advanced to 60, buyer 30, at last evening's board.

Buckeye has been considerably inquired after at from $16@17; about 550 shares have changed hands. Very favorable accounts have been received from this mine. See notice elsewhere.

Bajazette has been quiet and may be quoted at $42@47. Melones has been heard from at $40; Bullion has been uniform at $76.

Nevada, J. G., has encountered a considerable decline; closing last week at $110, it has gradually dropped to $88@92.

Mary Ann has met with a slight business at $90@105. Baltic has still further declined, and may be quoted firm at $140.

Overman has been held firm at $400; Blue Ledge has met with a light business at $18@20; Kohler Brothers has been considerably inquired after at $21@25½; Central America is steady at $16; California Tunnel at $22@24.

Uncle Sam has been sold at $900, but has few sellers.

Burnside has met with considerable business at $12½. Three hundred shares of Shoshone has changed hands at $2.25@2.65. Seneca may be quoted at $15. Harmon has met with sales at $25@28, but closed at $21.

Sacramento and Meredith is firm at $53. Davy has been heard from at $100; Florence at $30; Lancaster at $11; Union, R. D., at $1.37.

Santa Rosa has met with a large business at $5@8; Coso has sold at $4@4½.

Real del Monte is in less request and at reduced rates. It has declined during the week from $86@90 to 65@70. Another shipment of bullion of $12,000 was made on Wednesday.

Wide West has slightly improved, and may be quoted at $24@25.

Antelope has dropped to $175, with but a single transaction noted.

Bodie Bluff has sold at $1½; Willow Springs at $2.

Reese River Pioneer Stock and Exchange Board.

The following are the proceedings of the Reese River Stock and Exchange Board, for the week ending April 14th, as reported in the *Reville:*

REESE RIVER DISTRICT.—Burrington, $15 asked; Emma Funston, $8 asked; Kickapoo, $8 asked; Kate Wade Tunnel, $1 asked; Maggie, $20 bid, $500 asked; Mills, Post & White, $10 asked; Southern Light, $15 bid, $22,50 asked; Smith & Martin, $3,50 bid, $12,50 asked; Wall. $40 asked; Eclipse, $10 bid; Southern Light, $12,50 bid, $20 asked; Smith & Martin, $2,50 bid.

AMADOR DISTRICT.—Rough & Ready, $20 bid, $30 asked; Wild Wood Tunnel, $4 asked.

SMOKY VALLEY DISTRICT.—Everett, $100 asked, $25 bid; Mountain Co. $8 asked.

AUGUSTA DISTRICT.—Sister Series, $10 asked; Augusta, $7 asked.

SAN ANTONIO DISTRICT.—Valencino, $2 bid.

MISCELLANEOUS.—Ethan Allen, $20 asked; Wm. B. Astor, $5 asked; Yates & Yandle, $4 asked; Silver Star Co., $2 asked; Jefferson Ledge, $2,50 asked; Lapine Ledge and Tunnel Co., $5 asked.

Legal Tender Notes.

San Francisco, Friday April 22.....60 per cent.

THE BEST TIME TO CUT TIMBER.—This subject has often been discussed in the agricultural *journals*, and various opinions expressed. Mr. Ambrose Kimball, of Reading, Mass., writes to the Boston *Recorder* as follows:

"A short time since I saw a statement on this subject in a newspaper. I wish to give my own experience and observation for over fifty years, constantly working and using all kinds of timber, more especially oak, ash and walnut. I have learned by dear experience, for I have lost much by the effects of worms in my timber, and have found when timber may be cut and have no worms, or powder dust, as it is called. Cut timber from the middle of September to the middle of November, and you can not get a worm into it. October and November are perhaps the best months, and sure to avoid the worms."

RICH MINES.—The Downieville *Messenger* says that the diggings at Rock creek are paying at the rate of $10 per day to the hand, which is a fair average. The Forest Company have lately struck a streak of heavy gold, 4, 6 and 8 oz. pieces being quite common.

NEW SMELTING WORKS.—A company has been organized for the purpose of erecting copper smelting works at Genesee Valley. They intend commencing work immediately.

The *Mountain Messenger* says: We deem it worthy of note, and count it a good augury, that the first money we received after coming to Downieville, was paid us by a minister of the gospel.

PROFESSOR AGASSIZ says that a grasshoppers, organs of hearing are in his legs. Of course, when in doubt as to threatening danger, he is enabled to jump to a conclusion and a safe position at the same time.

SALIVATED.—A number of firemen, who were engaged about the late fire at the Gould mill in Virginia, were badly salivated by inhaling the fumes of quicksilver given off from the amalgam in the pans.

MOUNT DIABLO.—Prospecting is going on quite extensively in the bowels of this mountain.

A Man in Albany gave a $500 piano to the Sanitary Fair—took one ticket himself in the lottery, and got the piano!

There are eighteen persons confined in Castle Thunder, charged with attempting to assassinate Jeff. Davis.

It is full of the most valuable reading matter. Those at all interested in mining affairs should subscribe for it at once.—*Alameda Gazette.*

It is devoted to news, art, science and progress, and should receive a liberal support.—*Solano Press.*

[Written for the Mining and Scientific Press.]

The Howell Crusher.

Messrs. Editors.—In your issue of the 9th inst. is given an Extract from the Colorado *Mining Journal* of the 12th ult., entitled "Desulphurizing," in connection with which mention is made of the "Howell Crusher," and subjoined thereto a few editorial remarks upon the *availability* of that machine.

In the belief that these remarks were dictated solely for the advancement of the interests of the mining community, less hesitation is felt in addressing you touching our past experience with that machine and its future prospects as a pulverizer.

When that machine was first introduced the revolving arms were cast solid in one piece with the hub, so that when worn off at the ends both had to be thrown away, thus entailing a heavy loss, not commensurate with the amount of work done. For this reason those machines could not be considered a success. To remedy this, however, plates were so attached to the hub, in lieu of arms, so that when their ends were worn off they could be easily removed and replaced by new ones, which diminished the loss by wear to such an extent as rendered the "Crusher" to the mining community available at last.

With this leaf from the history of the Howell Crusher before you, we think upon a careful perusal of the paragraph in question that you will see you have fallen into a natural misapprehension of its tenor, arising from a probable typographical error, wherein it is said that the Crusher "has, after numerous experiments as to the best materials for shoes, and the most profitable rate of speed, been rendered available at *least*," instead of available at *last*. That this was the intention, is clear from the concluding sentence of the paragraph, wherein it is said that "the progress with the Howell Crusher *alone* has been in the highest degree satisfactory;" that is to say when used independently of the desulphurizing process, and to which the other remarks of the paragraph have reference.

If such is true of the machines sent out to Colorado last year, how much more so is it when compared with the improved machines we are now building at the Vulcan Iron Works, in this city, in which are embodied all the improvements necessary to remedy these and other defects developed by experience in the use of this machine, and to which we now beg to call your attention, believing that they not only overcome all the objections so clearly pointed out by you, but will render them a prime necessity to all well managed mines.

The wear of the beaters is caused by the friction of the material as it is projected outward against the toothed rim and by the action of the dust at the end. Now as the pressure at any point is dependent on the curvature, distance from the center and direction of tangent, it is clear that it could easily be controled by the application of such a curve as would lessen and equalize the pressure from near the center to the end of the arm. But it has been found by experience that the wear at the end caused by the action of the fine dust is greatly in excess of that of the other, so much so that after the end of the beater has been worn down to one and a half inches, the effect of friction on its face could hardly be observed. In consequence of this, the working face is now made in two pieces, of which the tip or wearing end forms but one fourth of the whole. The amount of wear itself is now lessened by a more free and liberal discharge than formerly. The old discharge consisted in a pipe, of about six inches in diameter, forming an elliptical opening in the side plate and extending from the teeth toward the center; and as the space between the teeth and the tips of the beaters measured only about one and a half inches, by far the greater portion of the outlet extended within the range of the beaters. Now as air is discharged only as a medium to carry out the dust, the same ought to be discharged from where the dust is formed, that is to say from the annular space above mentioned. It is clear, therefore, that with the old discharge a great deal of air is expelled without dust, and the object in view could only be obtained by an increase of pressure or speed, causing the air and dust to vibrate backwards to find a passage within the range of the beaters; thus wear was increased and power wasted, the latter increasing with the square of the velocity.

Our present machine obviates this by the use of a semicircular discharge, having an opening two inches wide, and covering the annular space before mentioned. The air and dust is received within a spiral passage, which is so connected with the discharge tube as to allow the unpulverized pieces to drop back through a small aperture within the path of the beaters. The air issuing from this opening having, by virtue of its location, less pressure, has little power to resist the return of the coarser grains to the machine. By means of an adjusting valve, the draft in the spiral passage can be so regulated as to adapt it to the fineness wanted and the nature of the substance to be pulverized.

This Crusher, thus constructed, we now maintain is less subject to wear, for the same amount crushed, than any machine or machinery used for that purpose which has been put into successful operation. Let us compare it with that of stampers: The shoe of a stamper of 600 pounds will average say 30 lbs., and wear out in crushing say 40 tons of hard quartz. Experience shows that the end of a cast iron beater, three-fourths of an inch thick, will wear down one and one-half inches for every 35 tons crushed. It will therefore be very reasonable to assume that a beater one inch thick, made of better material, and allowing for wear two inches, will crush at least 40 tons. Having three beaters, and each tip weighing about two and a half pounds, our wear for the same amount crushed will be to that of stampers as 7½ to 80 or about one-eleventh part as much, while the wear on the rim is not one-tenth as great as that of the dies of the stampers, a point in favor of our machine which cannot be overestimated when we consider the cost of transportation in this country. The next point of primary importance relates to the strength or safety of the beaters. Our beaters are now so constructed that the strain produced by 2,500 revolutions exerts on the weakest point only one-tenth part of the strain necessary to cause fracture.

San Francisco, April 19th, 1864. ***

The Reese River Mines.

NUMBER II.

THE REESE RIVER DISTRICT.

I have said that this district extends from San Francisco Cañon on the north to the Veatch Cañon on the south, Pony Cañon being about midway. Just at the entrance to this cañon the first discovery of silver was made, by a Pony rider named Talcott, and the ledge very appropriately named the "Pony," and directly after the "Latham" was discovered, just on the opposite side of the cañon. The town of Clifton lies immediately below them. Both these ledges are undoubtedly good, but from being badly managed have fallen into disrepute, especially as there are certain parties owning large interests in them who never pay a dollar towards developing the mines. Discoveries were made about one mile higher up the cañon, of ledges surpassing these in richness; the town of Austin was laid out, and the rush commenced. Back of Austin, on the north side of the cañon, are a couple of hills called respectively, the "Austin" and "Lander;" it is here that most of the rich ledges with which the public is familiar, are situated; besides a great many good ones quite unknown to fame.

On the Austin hill are the Morgan & Muncey, Savage, Seymour, Southern Light, Blue Ledge, North Star, Oregon, Florida, Manhattan, Cincinnati, and Black Rock. On the Lander hill to the left are the Post Hole, Plutus, Providential, Mills & Post Louisiana, Douglass, Hooker, Lander, Wells & Warner, Smith & Martin, and Samanthe. Any of these ledges have ore which will yield from four hundred to six thousand dollars per ton; the latter being, as a matter of course, from selected rock. Several of these have yielded small lots of ore which have assayed as high as $22,000 per ton, and this of silver alone, there being no gold whatever in the rock.

Austin has been contemptuously termed the 'Razor Back" district, and the assertion has been made "That the ledges have no casings." He who says this is certainly not a scientific miner, and never could have examined any of the mines which have been opened, very closely. I no not deny that many of the mines are narrow at the surface, and that they get narrower or pinch off a short distance below; but in every instance where sufficient work has been done, and a shaft or incline pushed down to the water line, the ledges have been found to increase in width and richness, giving every promise of permanency.

I shall have occasion to mention many ledges by name in the course of these articles, and will here state that my object is not to puff any particular mine, but to name them as illustrating the characteristics of the districts. There is every evidence here of some grand convulsions of the earth having taken place at some remote period; this is everywhere apparent from the San Antonio District on the south (which is as far as I have been) to many miles north of Austin. In the slate formation the effect was to break off the outcrops, and tumble and cast them down the hills, the angle and dip of the strata underneath remaining unchanged. This is seen in the Liberty ledge at San Antonio, a great mass of tumbled rock having been located for a ledge, while the true ledge was found several hundred yards higher up. So too with the General Banks, in the Amador district; this latter being a break off from some ledge higher up the hill, probably from the Amador.

In the granite formation the effect was different; the granite having lateral seams, the disturbance caused the overlying stratum to slide upon the under without altering the appearance of the *surface*. Of course the quartz veins were cut off and the separated portion carried with the slide, leaving a seam of finely broken quartz and clay between the upper and lower strata. This is very plainly seen in the ledges around Austin, which accounts for their being called "Razor-backs." The North Star ledge commenced at the outcrop with a width of about 20 inches; at about thirty feet it thinned down to about six inches; but at sixty feet the vein was found solid; from that it widened until at about two hundred feet down on the incline (which would make about sixty feet perpendicular depth) it has a width of forty five inches of ore unequaled in richness. More than one half of the ledge is antimonial or ruby silver; much of the other half being very rich black sulphuret and chloride. There is a fine clay casing at the foot, and hanging walls. The *third* class ore from this mine works in the mill over five hundred dollars per ton. The Oregon and Florida, first above, exhibit the same effect of the slide, and both have the same class of ore, with good solid ledges—from twenty-four to forty inches in width, and are increasing in richness as they go below the water level. On the other hill the same effect is to be seen in the Lander and Plutus. The latter commenced with the ledge nearly three feet wide. At twenty feet down on the incline, there was nothing to follow but the admixture of broken quartz and clay; this gradually thickened until at a distance of eighty feet down, the ledge was found solid and undisturbed, and having a width of about forty inches, with casing of clay three inches thick. When the shaft is carried down below the water level there is no doubt this will have the same class of ore as the others—and the Lander the same. In my opinion there is not a ledge in the vicinity but will prove rich and permanent when followed down below the water level. There are many claims located, which are not ledges and cannot be called mines—small transverse seams of quartz not more than three or four inches in width; the Mexican miners call them "Hilos"—of such, those who desire to invest money in mining, should beware. People have not been cautious enough in their speculations. Last summer many who came to Austin got excited at each discovery and were too eager to buy feet, at any price from twenty to fifty dollars, not even taking the trouble to enquire who were their copartners in the claim. There are a great many good ledges both north and south of Austin, but as they all present the same characteristics, it is not necessary to name them. Many very excellent mines have been almost ruined by bad management and incompetent superintendents. I may mention the Yankee Blade as an instance. If one end of that ledge is worth one hundred and fifty dollars per foot, there is no reason why the other end should not be worth more than *fifteen*. Men have been sent to Reese River to superintend mines, who have no knowledge whatever of the business. It does not follow that because a man is an accomplished steamboat captain or a successful drayman, that he should be a good mining engineer A.

[Written for the Mining and Scientific Press.]

The Kohler Brothers, and Other Mines.

Messrs. Editors.—Many of your readers are desirous of knowing the exact location of the Kohler Brothers mine, the stock of which now forms one of the features of the mining share market, and is bought and sold daily in the stock boards, and which has risen from seven dollars and a half to twenty-four dollars a share in the last two weeks and is still going up. For their edification I cite them to the following facts derived from personal observation:

Although unfortunately I am not an owner, I have

been at two of their mines several times—the mine Rica and the Esperosaña; they also own another, reputed very rich, which is called the Salegena mine. These mines are located in the District of San Antonio, in Lower California, Republic of Mexico, about eighteen miles from Ventona Bay, forty-eight from La Paz, and one hundred and fifty north of Cape St. Lucas. The Mexican steamer stops at these ports three times each trip, twice at Cape St. Lucas and once at La Paz; and Wells, Fargo & Co's express passes from one point to the other, through the town of San Antonio. The Company are running a fine tunnel into the Mina Rica, from which mine they have obtained rich metal, although they have not yet struck the main vein. This mine is on the San Joaquin veta, (vein) on which is also located the Santa Cruz, Trinidad, San Jose or Peninsular Company, the San Antonio, Picocho, Gobernadora and San Joaquin mines, all of which are taking out more or les *petanque* silver ore, or "metal de Fuego." This vein is exceedingly rich in places, but is somewhat narrower than the other veins of the district, seldom running wider than twelve feet in the widest part.

The former owner of the Mina Rica realized about $70 000 in three months from the mine on two separate occasions, and the second time became so excited with his good fortune that he went to Mazatlan on a spree, and while in a state of delirium cut his throat. Having no heirs, the mine fell back to the Government and became denounceable. The Esperosaña mine is on the San Nicholas vetas. The San Nicholas vetas, or veins, are three in number, running parallel with each other, and parallel and about a mile from the San Joaquin veta. The San Nicholas veins are noted for their richness and extreme width—in places being fifty-six feet thick from casing to the cap or wall rock. On these veins are the oldest and best mines of the district. They are worked by the different companies for a space eight miles in length. On the south of the Esperosaña mine is the Guasave, belonging to the Franco-American Company, who have a fine mill and furnaces for reducing ores. They have a vein of fine metal eleven feet thick in the shaft. The next south is the Pesorana, belongiug to the Mexicans, who are working their ore in the old style of ovens, and sometimes they sell a few cargoes. Several companies still adjoin on the south; but I did not visit them and can only speak from hearsay that they have an abundance of metal. The first company on the north is the San Nicholas, belonging to the house of Melcher & Brothers, in Mazatlan. It is superintended by Conrad Flores, who works it in the old Mexican style of ascending and descending the shafts in zig-zag shape on notched poles, with the ore on the peons' shoulders or backs.

Flores shipped to Freiberg in 1862 twelve hundred tons of ore at a clear profit of one hundred and forty dollars a ton; and in 1863 he shipped to the same place one thousand five hundred tons at a clear profit of about one hundred and eighty dollars a ton. This year he is buying ore from other companies and paying from thirty to forty dollars a ton, which will probably increase this year's shipment to treble the amount of last year. The next is the Codecia mine, cornering in for a short distance on the three veins, and then claiming on a supposed feeder. They are taking out very rich ore from one vein in this mine which assays in the thousands; it belongs to San Francisco men. The next is the St. Louis, belonging to some of the Moreno Brothers, who have a fine body of metal, but they work it very slow. The next is the Peña, belonging to San Francisco men; they have a very fine body of metal in the shaft, and will soon have their tunnel into the vein. This is considered a very rich mine, from the richness of the *azogue* metal, or top and oxadised ores. The next is the Soledad, belonging also to Melcher & Brothers, and is worked the same as the San Nicholas. The next is the La Marroreña, owned by San Francisco men; this company have out two hundred and fifty tons of the richest ore on the peninsula. Shares in this mine have been ranging from sixty-five to one hundred and ten dollars each; there are one thousand shares in the company. The next mine is the Maria, owned by Christopher Mchmidt and others; it is the same size as the Esperosoña—six hundred feet long—and full of fine ore; it will be a rival to the best. The next three companies are Mexican, working in their own style. The next is the Mendocina mine, belonging to the Trinnfo company; they are getting out splendid ore and hauling to their mill, which is expected to start in about two weeks. They expect to come up to the best ore in the camp, and bid fair to do so.

All of these mines have, by the Mexican laws, six hundred feet in width, and most of them are two thousand six hundred feet in length, on the veins. The Kohler Brothers company own two mines of two thousand six hundred feet each, and one of six hundred feet. The company is divided into five thousand shares. If their Esperosoña mine, from which they can now extract twenty-two tons of rich ore daily with seven hands, was in Washoe, it would command two thousand five hundred dollars a share, instead of twenty-five dollars—although freight and labor is five hundred per cent. cheaper in lower California. There are many other mines in the vicinity of those mentioned, and some perhaps equally rich.

H. L. P.

Commencement Day.—The first Commencement Day of the College of California, at Oakland, occurs on the first day of June, and is of peculiar interest to all the friends of edneation throughout the State. The anniversary address will be pronounced by Hon. Newton Booth, of Sacramento, and the poem by F. B. Harte, of this city. This commencement, says the *Pacific*, will have an additional interest from an invitation which will be extended to the Alumni of other colleges, residents in this State, to come together at Oakland, on the day preceding, for purposes of literary fellowship. An oration will be pronounced on that day by John B. Felton, Esq., of San Francisco, and a poem by C. T. H. Palmer, of Folsom. Every collegiate graduate in the State, whose name could be ascertained, has been invited to attend, and no doubt this occasion will be one of great interest to the *literati* of the State.

Assessments upon Stock of Corporations.—The eighth section of the Act concerning assessments upon the stock of corporations is as follows, referring to advertisements of sales of stock for non-payment of assessments:

Section 8. Said last-named notice shall state every certificate of stock separately, with the number of shares which it represents, and the amount due thereon, except where certificates may not have been issued to the parties entitled thereto, in which case the number of shares and the amount due thereon, together with the fact that the certificates for such shares have not been issued, shall be stated.

In looking over the list of advertisements referred to, as published in the press of this city, we find not a few which do not meet the requirements of the section quoted above. Would it not be worth the while of mining secretaries to see that their advertisements correspond with the requirements of this Act?—*Morning Call.*

The editors of the *Call* should have at least read the afore-mentioned Act in full before attempting to advise mining secretaries how their advertisements should appear. Although the new law is magnificently mystical in some of its provisions, the following section is certainly plain enough in contradiction of the opinion expressed above by the *Call:*

Section 15. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed; provided that such repeal shall not affect proceedings commenced for the collection of assessments heretofore levied, but all such assessments may be collected in accordance with the provisions of the laws then in force.

Indurating Iron and Protecting it from Oxidation.—Mr. J. Webster proposes to effect this in the following manner. The indurating compound consists of equal proportions of carbonate of potash and American ash pulverized and mixed together, to which hydrochloric acid is added until carbonic acid gas ceases to be given off, when the mixture is put into a close vessel or retort, and heated to drive off the water and reduce the mass to a homogeneous liquid state, after which it is run off and cast into blocks, which become solid on cooling. This mixture (which may be called No. 1,) is roughly pulverised and added to prussiate of potash (also roughly pulverised) in the proportion of 17 per cent of the former to 83 per cent of the latter, and the whole melted in a close vessel and cast into blocks, which, however, must be again liquified for use, and which may be called No. 2. The metal to be treated is heated to a bright red heat, and dipped into preparation No. 2, and then left to cool, when the hardening process is complete. For protection from oxidation, a varnish is prepared, consisting of 50 per cent of paraffin oil, 15 per cent of naphtha, 3 per cent of tar, about 3 per cent of mixture No. 2 in a pulverised state, 20 per cent of rosin, and about 10 per cent of tar oil. This preparation answers for rough articles, but for finer articles it will be found advisable to add a small proportion of gutta percha with sulphide of carbon in addition to the naphtha as its solvent.

ENLARGEMENT

—AND—

Important Improvement

—OF THE—

MINING AND SCIENTIFIC PRESS.

Enlarged from Eight to Sixteen Pages at the Commencement of Volume VIII, January 1st, 1864.

Two Volumes (of 416 Pages Each) per Annum.

PUBLISHED EVERY SATURDAY.

SUBSCRIPTION TERMS IN ADVANCE:

One Volume, six months,.....$3.00
Two Volumes, one year,.....5.00
Five Copies, one year,.....20.00

The present proprietors of this journal announce with confidence their determination to render to the friends of Science, Mining and Mechanical Industry a newspaper published upon this coast worthy of their patronage at home and their pride abroad. We shall seek favors only through our endeavors to merit them.

The Editorial Department

Will be conducted with ability, in a liberal and reliable manner sparing not in expense, veneration for honesty, or respect for common sense.

Competent Correspondents

Will be employed to furnish us full and reliable information concerning newly-discovered mines; and through vigilant efforts we shall secure for our readers the latest intelligence from all important mining localities. In our list of

Occasional Contributors

We have the privilege of numbering gentlemen ranking among the most talented and experienced writers who manifest a prominent interest in the progress of Art and Science upon this coast, including the names of

Prof. J. D. Whitney, J. H. Churchill, A. M.,
Dr. T. M. Logan, A. B. Paul,
Dr. J. A. Veatch, H. S. Brooks,
Rev. O. C. Wheeler, W. Wadsworth,
M. Atwood, T. Price,
Prof. W. H. Brewer. J. E. Clayton.

Illustrative Drawings and Engravings

Superior in finish and useful and attractive in character, will be published from time to time, representing the most important new inventions and improvements in the art and science of

Mining and Mechanism

Developed upon this Coast. Each number of the paper will contain full and correct reports of

Sales by the Stock Boards of San Francisco.
Sales by the Stock Board of Virginia City.
Sales by the Stock Board of Esmeralda.
Sales by all Mining Stock Boards.
Reports of Bids and Sales in San Francisco.
Reports of Bids and Sales in the Territory.
A Weekly Review of the Stock Markets.
A Weekly Review of General Mining Interests.
General Summary of California Mining News.
General Summary of Mining everywhere.

Valuable Information for all Miners.
Indispensable Knowledge for practical workmen,
Practical Suggestions for intelligent artizans.

Valuable Facts and Statistics

Essential to members of all trades and professions; the best approved methods of mining; the latest discoveries and inventions in mining operations; practical, scientific views upon geological and mineralological questions; the proper methods of reducing ores and saving the precious metals. In fact every sentence calculated to lessen the number of hard blows uselessly rendered by miners and working men, and add wealth by intelligent saving of material or labor, will find welcome space in our columns. The paper will afford many

Practical Hints

With regard to the manner of working and securing mines, derived from the actual experience of parties in our own and other countries. Also hints concerning the location and possession of mining grounds; the laws peculiar to different districts and countries; and notices of all important decisions of the law in mining cases. As a

Book of Reference

The bound volumes of the Press will find no rival in value to the intelligent and industrious citizens of the Pacific Coast, who cannot but feel a source of pride in the history of the inventions, discoveries and prosperous developments of the remarkable era through which we are now passing.

The Stock Record

As presented in our columns will be found correct, distinct and most convenient for preservation and future reference.

For Sending Abroad.

As a paper for mailing regularly to your friends in the East, or to correspondents elsewhere, none can be selected more appropriate, or better calculated to dispense reliable information with regard to transpiring events on this coast and the progress of California.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and Newsdealers, acting as our agents, will receive liberal commissions.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Office in Government House, Nos. 56 and 57, corner of Washington and Sansome streets, San Francisco.

DEWEY & CO., Publishers.

C. W. M. Smith.....W. B. Ewer.....A. T. Dewey.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides, and the evidence of any error upon our part will be received in friendship, and treated with respect.

Mining Laws Passed at the Late Session of the Legislature.

Mining Partnerships.

AN ACT Concerning Partnerships for Mining Purposes.

Section 1. All written contracts of copartnership for mining purposes upon the lands of the United States within this State, formed by two or more persons, shall be subject to the conditions and liabilities prescribed by this act.

Sec. 2. Any member of a copartnership, or his successor in interest in any mining claim, who shall neglect or refuse to pay any assessment, or shall neglect to perform any labor or other liability incurred by the copartnership agreement, may, after the expiration of sixty days after such assessments, labor or other liability has become due, be notified in writing by any remaining partner or partners, or by his or their agents, that such assessment, labor or liability is due, which written notice shall specify the name of such mine and the district wherein it is located, and shall particularly mention the liability which has been incurred; and if such delinquent reside within the State, he shall be personally served with such notice; and if the person so notified shall refuse or neglect, for thirty days after service of such written notice, to comply with the requirements of the copartnership agreement, the remaining partner or partners may sue the interest of such delinquent partner in and to such mining claim.

Sec. 3. All sales under the provisions of this Act shall be at public auction and by giving five days notice thereof, by posting written notices in three public places within the mining district where such mine is located. The notice shall also specify the extent of the interest to be sold and the name of the delinquent partner or partners, and the time and place of such sale, which place shall be within the district where the mine is located. The purchaser at such sale shall acquire all the rights and title of the delinquent partner.

Sec. 4. If any delinquent partner in any mine is absent from the State, or resides in any other State or Territory, the notice to such delinquent shall be by publication once a week for four months in some newspaper published in the county where the mine is located; or, if there be no newspaper in the county, then such notice shall be published in some newspaper in an adjoining county. After the expiration of the time of such publication, the interest of such delinquent shall be sold, in the manner prescribed in section third of this Act.

Sec. 5. This Act shall take effect from and after its passage.

Approved April 4, 1864.

Removal of Offices from Aurora.

AN ACT to authorize the removal of the office and principal place of business of Mining and other Corporations, from the town of Aurora in the Territory of Nevada to the city of San Francisco, or other places in the State of California.

Section 1. It is hereby declared lawful for any Corporation heretofore organized under the laws of this State, whose principal place of business is in the town of Aurora, Territory of Nevada, and such Corporation is hereby authorized and empowered to remove its office and principal place of business to the city of San Francisco, or to any other city or town in the State of California, as such Corporation may select by a resolution of the Board of Trustees thereof adopted in accordance with its By-laws.

Sec. 2. Every such Corporation desiring to make such removal shall file in the office of the Clerk of the City and County of San Francisco, or of the City and County of Sacramento, or of such County in this State wherein is situated the city or town to which such Corporation desires to remove, a certified copy of such resolution, under their Corporate Seal, together with a certified copy of the original Certificate of Incorporation now on file in the office of the Secretary of State, and shall also deliver a certified copy of such Resolution to the County Clerk of Esmeralda county, Nevada Territory, and shall cause the same to be published for four successive weeks in some newspaper in the said town of Aurora, and from the time of the filing of the said instruments in the Clerk's office of the proper county in this State, the office and principal place of business of such Corporation shall be deemed removed to and established at such city or town in this State as may be declared in such Resolution.

Sec. 3. The Resolution heretofore passed by the Board of Trustees of any Corporation, whose office and principal place of business has heretofore been in the town of Aurora, removing such office and place of business to any city or town in the State of California, is hereby legalized and declared valid and effectual, and from the time of the passage of such Resolution, all acts and proceedings of the Trustees of such Corporation, had or done in such city or town in this State, are hereby declared and made valid and effectual, in law and equity, as fully to all intents and purposes as though such city or town had been originally designated in the Certificate of Incorporation of such Corporation as the principal place of business thereof, *provided* that such Corporation shall, within sixty days from the passage of this Act, file in the office of the County Clerk of the county wherein such city or town is situated, a certified copy of such Resolution, attested by their Corporate Seal, together with a certified copy of the Certificate of Incorporation of said Corporation now on file in the office of the Secretary of State.

Sec. 4. This Act shall take effect from and after its passage.

Became a law (by limitation) the 27th of February, 1864.

Transfer Agencies.

AN ACT to authorize Corporations organized in this State for the purpose of Mining in or without this State, to establish and maintain Transfer Agencies in other States.

Section 1. That it may be lawful for any corporation organized in this State for the purpose of mining, or carrying on mining operations in or without this State, to establish and maintain agencies in other States of the United States for the transfer and issuance of their stock, and a transfer or issuance of same at any such transfer agency, in accordance with the provisions of this statute, shall be valid and binding, and as fully and effectually so, for all purposes, as if made upon the books of such corporation at its principal office within this State.

Sec. 2. All stock of any such corporation issued at any such transfer agency, shall be signed by the President and Secretary of the corporation, and countersigned at the time of its issuance by the agent or agents of such corporation having the charge of such transfer agency, and no stock shall be issued at such transfer agency, unless the certificate or certificates of stock in lieu of which the same is issued, shall, at the time of such issuance, be surrendered for cancellation.

Sec. 3. The stockholders of any such corporation may pass by-laws for the regulation and conduct of any such transfer agency; provided the same be not inconsistent with the provisions of this Act; and such transfer agency shall at all times be subject to the control of the Trustees of said corporation.

Sec. 4. All acts, or parts of acts, inconsistent herewith are hereby repealed.

Sec. 5. This Act shall take effect from and after its passage.

Approved April 4, 1864.

Changing Place of Business.

AN ACT to authorize Mining Companies or Corporations to change their principal place of business.

Section 1. Any Mining Company or Corporation lawfully organized and incorporated for mining purposes within the State of California may change its office or principal place of business by first obtaining the consent in writing of the Stockholders representing two-thirds of all the Capital Stock of the Company, provided that notice of such intended change, after such consent shall have been obtained, shall be inserted for thirty days in some newspaper published at or nearest the principal place of business of said mining Company or Corporation, designating the county, or city and county to which it is intended to remove, before such removal shall be deemed lawful.

Sec. 2. Any Mining Company or Corporation availing itself of the privileges of this Act, upon filing in the office of the County Clerk, or city and county to which a removal is intended to be made, a certified copy of its Articles of Incorporation, together with a Certificate of the Trustees of the Company or Corporation, under the Seal thereof, that the requirements of Section One of this Act have been fulfilled, shall, from the time of such filing, be vested with all the powers in its new place of business which it might or could have exercised if originally incorporated in the county to which its office or principal place of business shall be removed.

Sec. 3. This Act shall not be so construed as to authorize any mining Company or Corporation to remove its office or principal place of business out of the State.

Sec. 4. All Acts and parts of Acts inconsistent with the provisions of this Act are hereby repealed.

Sec. 5. This Act shall take effect and be in force from and after its passage.

Approved, February 15th, 1864.

Two circular saw-mills have been set up by the Yankees at Vicksburg, which are turning out large amounts of fine timber.

Memoranda
FOR MINING SECRETARIES
ADVERTISING NOTICES ON SATURDAYS.

DATING OF ADVERTISEMENTS.

Assessments levied by order of the Board of Trustees of Mining Companies will be duly advertised, in strict accordance with the new law, in the Mining and Scientific Press by observing the following rules, which we publish for the purpose of assisting Secretaries in expediting their business, and avoiding the possibility of errors in regard to dates:

When the order for an assessment is made on MONDAY, TUESDAY, WEDNESDAY, THURSDAY or SATURDAY of *any week*—

THE NOTICE OF ASSESSMENT may appear on the FIRST SATURDAY subsequent to the order.

THE DAY FOR THE NOTICE OF SALE to appear may be fixed on the FIFTH SATURDAY subsequent to the order.

THE DAY OF SALE may be fixed on the SEVENTH SATURDAY, or any day (except Sunday) from that date to the EIGHTH FRIDAY, subsequent to the order.

Owing to the arbitrary provisions of the new law (the original bill of which deprived the mining public of the benefit of their choice of advertising in weekly journals), no assessment can be made upon any Friday, and the publication of the Notice of Sale be made weekly in the Saturday issue of any daily or weekly newspaper. *But* all *Notices of* Assessment *can duly appear on Saturday*; also, Notices of Sale except in cases where the order for assessment is dated on Friday.

Revised Copies of advertisements will be furnished gratuitously to Secretaries who desire advertising near the mines.

Advertisements should be handed into the office as early in the week as possible.

Our columns are considerably wider than those of the daily papers, and consequently more words are contained in a square of our matter.

DEWEY & CO., Publishers,
Mining and Scientific Press, 56 and 57 Government House, corner Washington and Sansome streets, San Francisco.

FORM OF NOTICES—NEW LAW.

[NOTICE OF ASSESSMENT.]

[Thunderboldt Gold and Silver Mining Company, Virginia District, Storey county, Nevada Territory.]

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the [4th day of April, 1864], an assessment of [twenty-five cents] per share was levied upon the capital stock of said Company, payable on the [5th] day of [April, 1864,] to the Secretary, or to John Brehard, Superintendent, at the mine]. Any stock upon which assessment shall remain unpaid on [Saturday, May 7th, 1864,] will be advertised on that day as delinquent, and, unless payment shall be made before, will be sold on [Saturday, May 21st, 1864, at 12 o'clock, M.,] to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees,

[JOHN HANCOCK, Secretary.
Office, Room 77, No. 224 Montgomery street, San Francisco.]

[NOTICE OF SALE.]

[Thunderboldt Gold and Silver Mining Company, Virginia District, Storey County, Nevada Territory.]

Notice.—There is delinquent upon the following described stock, on account of assessments levied on the [fourth day of April, 1864], the several amounts set opposite the names of the respective shareholders, as follows:—

NAMES.	NO. OF CERTIFICATES.	NO. OF SHARES.	AMOUNT.
Jas. Dixon.....	24	18	$26 28

And in accordance with law, and an order of the Board of Trustees, made on the [fourth day of April, 1864], so many shares of each parcel of said stock as may be necessary will be sold at [the salesroom of Jerome Rice & Co., No. 327 Montgomery street, San Francisco,] on [Saturday, May 21st, 1864, at 12 o'clock M. of said day], to pay said delinquent assessments thereon, together with costs of advertising and expenses of the sale.

[JOHN HANCOCK, Secretary.
Office, 224 Montgomery street, San Francisco.]

WASHOE MINING ITEMS.

The Rhode Island Mill is putting up a new battery of 15 heavy stamps. When the improvements now in progress on this mill are fully completed, it will be one of the best and largest mills in Gold Cañon.

A Big Tunnel.—The Gold Hill and Virginia Tunnel is on the grandest scale of any similar work in the Territory. It starts in a short distanee below the Caledonia Tunnel, some distance helow Gold Hill, and is now in some hundreds of feet. The tunnel is suffieiently large to admit of horses heing used in pulling out the cars. The work is under the very effieient supervision of Col. David S. Turner.

The Kenosha Company, on Cedar Hill, north of Virginia, have struek a spur of rock, rich in gold, in their shaft, at the depth of 130 feet. They have been looking for it several years.

The Justis Company have eonclnded to erect steam hoisting works at onee. Whim hoisting has got to he too slow to suit their go-aheadativeness.

New Mill.—Mr. Land, of the Cedar Hill Mill, is about to ereet a fine new mill a few hundred yards helow the Pioneer Foundry, on the road to Silver City. It will be in operation hy the middle of July.

The Overman Company have a large force of mechanics at work putting up hoisting machinery at the mine. Their works are intended to be equal in capacity and finish to anythiug of the kind in that vicinity,

The Pride of America Tunnel is now in 800 feet, where, according to the Gold Hill *News*, they have a fine and apparently inexhaustible ledge of good paying rock. The ore is quite different from that usually found in Gold Hill district. The rock is being crushed at the Spanish Mill, Empire City, and is said to pay from eight to one hundred dollars per ton. The Pride of the West, it will he recollected, is now a dividend paying mine. It is located in the Devil's Gate district.

La Mina de la Alto.—According to the *Enterprise* some roek of extraordinary riehness has lately been taken from this lead, which at first was hut a few inches in width, but which is now ahout four feet wide, with indications that it will become still wider at a greater depth. Some ore taken from the lead at the depth of abont 10 feet, which was assayed by Leopold Kuh, showed in silver $735 90, and in gold $649 35 per ton, making its total valne per ton $1,385 25. Fifty pounds taken out across the lead, and supposed to he a fair average of the ore it contains, was worked by the Ophir mill process, and payed at the rate of $380 13 per ton. A ton of the ore is now heing taken out for a further mill test. This mine is situated nearly, or quite a mile west of the Comstoek and near the summit of Mount Ophir. Should it be found to widen wheu sunk upon and still remain as rich as at present, it will certainly he very encouraging to the Oole Company and to other companies at work on leads lying betweeu the Comstock and the La Mina De La Alto.

Discovery of Plumbago.—The Territorial *Enterprise* speaks of a vein or bed of plumbago that has been struek in the Kentucky tunnel, near Amerieau Flat. The tunnel has now cut into it to the distance of 50 feet and, as it has not yet passed through it, its full extent is not yet known. Mr. George R. Scott aud others have taken up a claim 1,400 feet in length on the lead, under the name of the Scott and Bergen Plumhago Miniug Company. There would appear to he enough of this mineral in this one bed or vein to supply the demand throughout the American world. This mineral is known to mineralogists under the uames of graphite and carburet of iron, but is best known hy the eommon names of plumhago and black lead. It is used in the manufaeture of pencils, for crucibles, in lubricating compounds, and as a polisher for iron work. There is also another deposit of this mineral near the Ophir Grade, a few miles east of Washoe City, (where at one time, fire-proof brieks were manufactured of it,) and it has heen found in other places in the Territory.

The most famous plnmhago mine in Europe is in England, in a mountain called Seatallor Fell; bnt this, once so eelebrated for the purity of the mineral found in it, is now ahout worked out. The mine has been known and worked since the time of Queen Elizaheth. Formerly it was only opened onee in seven years, and then for but six weeks. The value of the mineral ohtained in this short space of time was sometimes as great as thirty to forty thonsand pounds sterling. Sinee a plan has been discovered of purifying this common and coarser varieties, the value of the mineral has deereased until at present it is very eheap. Plumbago is found in a number of localities in the Atlantic States. The mines affording that hest for pencils are near Sturbridge, Massachusetts, though mines have also heen diseovered at Brandon, Vermont, Fishkill and Ticonderoga, New York, Wake, North Carolina, at St. John's, New Brunswiek, and in various other plaees.

REPORT YOUR EXPERIMENTS.—How much that is learned by our intelligent and successful miners and mill men, is never communicated. Experiments are constantly going on, often with important results, which would impoverish no one, by being made public, while they might save thousands to the State if they could only be made generally known. We are quite confident that there are many who possess valuable information, acquired from experience, who have no objection to making the same public, and who do indeed, communicate it to their immediate neighbors; but no farther. Here is valuable information. Why not report your experiments through the MINING AND SCIENTIFIC PRESS, the accredited organ of the miners of this State? Tell us how you get certain results, that others also may profit. You have no fears of competition. The material you are producing—gold, silver and copper, are always in demand; there is no danger that the market will be overstocked; they will always sell. It matters not if you communicate in a hurried way, so you only send us facts. We will put the same into readable shape. Report your experiments.

MINING AND SCIENTIFIC PRESS.

List of Contents.

No. 12—MARCH 19.—Farrand's Amalgamator—Illustrated; Important Developments; Copper as an Investment; What Science Saves in Mining; Treatment of Gold Ores and Sulphurets; Treatment of Silver Ores; Washoe Mining Items; Mechanical Department; Mining Gossip; Patent Department; A Remarkable Indian Tradition; Mining Share Market; San Francisco and Washoe Stock Reports; "Chippings;" Etc.

No. 13—MARCH 26.—Physical Growth of San Francisco; Calaveras and Tuolumne Copper Mines; Owens River Correspondence; The Baker Copper Company; Nevada County Correspondence; An Immense Casting; Extraordinary Power of Resisting Heat; The Other Side; Patent Department; A New Separator; Washoe Stock Markets; Full Report of San Francisco Stock Boards; Mining Gossip; Death of Mr. John Young; Items of Mining News; Record of New Incorporations; Miscellaneous Editorials and Mining Notices.

No. 14—APRIL 2.—Physical Growth of San Francisco; Owensville Correspondence; Mill Valley; Copperopolis Correspondence; The Gold Hill Mines, Washoe; Crude Bullion; Reese River Correspondence; Keith's Desulphurizing Process; Copper in an Iron Mine near Marquette; British and American Copper Mines; The Vassar Female College; The Colorado Mines; Mining Gossip; Mining Share Remarks; Stock Reports; Washoe Stock Sales; Incorporations; Chippings and Items.

No. 15—APRIL 9, 1864.—Hepburn & Peterson's Amalgamator—illustrated; Mental Growth of San Francisco; Owens River; Reese River Bullion; Augustin's Method of Extracting Silver from its Ores by the Use of Salt; Rock Springs District—Colorado; Mining Gossip; An Act Concerning Assessments and Advertising Delinquent Stocks; Mechanical Department—The Economy of Fuel and Heat, "An Enquirer" Once More; Patent Department—James' Gas-Lighting Invention, Drying Coal by Centrifugal Force; Desulphurizing; Glasgow School of Mines; Mining Share Market; Washoe Stock Sales; City Sales; Incorporations; Whitman Mine; Letter from Austin.

No. 16—APRIL 16, 1864.—Contains Twenty Pages.—Wagon Road to Southern California; Nova Scotia Gold Fields; Schools of San Francisco; Facts about Gold; Valuable Suggestions; Mechanical Department; Fair of the Mechanics' Institute; Stock Reports; Sales and Bids; Mining Share Market; Washoe Stock Market; A Nickel Mine; Fine Ore; Mining Gossip; Items; Great Improvement in Engraving; Interesting Experiment; Flax; Monster Gun; Ancient Tin Trade of Britain; Washington Mining District; Reese River Mines; Reese River Letters; Sacramento; Patent Department; Incorporations; Improved Steam Valve.

THE MINING AND SCIENTIFIC PRESS contains 16 pages in each No. and 416 in each volume; two volumes a year. Terms, in advance, 1 year $5; 6 mos. $3; 5 copies, 1 year, $20. For sale by all newsdealers. Liberal commissions allowed all who act as agents.

DEWEY & CO., Publishers.

Cor. Washington and Sansome streets, San Francisco.

Mr. A. T. Dewey, a journalist of experience, has become associated with Messrs. Ewer and Smith in the proprietorship and conduct of this paper. It inaugurated the new year by doubling its size and other improvements, and is now a first class journal for miners and mechanics, as well as for the general reader.—*Sacramento Daily Bee*

This journal comes to us this week with a new head and enlarged to the full size of the *Scientific American* published in New York—six teen pages. Those who take an interest in mining, underground art should not fail to read the prospectus of the PRESS, which may be found in our advertising columns, and those who may desire to see copies, intending to subscribe, will have specimens sent free on application by letter to the office of publication.—*Mountain Messenger, La Porte.*

MINING AND SCIENTIFIC PRESS.—This is one of our most valuable exchanges. It comes to us filled with the most valuable articles, original and selected, upon the subject of mining, and we subscribe to it to an awful extent. Every person engaged in mining to any extent, should be a subscriber to the PRESS.—*Gold Hill News.*

MINING AND SCIENTIFIC PRESS.—Having missed a few numbers of this excellent paper, we feared it had ceased to exchange; but as it has again resumed its regularity, we are a little easier on the subject. The MINING PRESS is an almost indispensable companion to the miner and mill man, and when in our peregrinations we find it in the cabin of the one or the office of the other, we look for, and invariably find, a superior intelligence and more satisfactory working than where it is unknown, and its precepts ignored. We would dislike to be deprived of it, either as editors, miners, millers, or mechanics.—*Reese River Reveille.*

RICHARD WEGENER,

Accountant, Mining Secretary,

AND GENERAL AGENT.

No. 204 Montgomery St., Southeast cor. Montgomery & Pine Sts.,

11-m SAN FRANCISCO.

THE ATLAS IRON WORKS,

No. 24 & 26 Fremont Street.

—MANUFACTURE—

STEAM ENGINES, MINING MACHINERY, QUARTZ MILLS, MINING PUMPS, AMALGAMATORS, AND ALL OTHER KINDS OF MACHINERY FOR MINING OR MILLING PURPOSES.

Castings of all kinds,

Furnished. Our new and complete arrangements will enable us to do this kind of work in a superior manner and on the shortest notice.

Steam Engines of Scott's Patent,

Can be furnished of any size, and of high or low pressure. These Engines combine so many points of decided improvement in their simplicity of construction, and in the economy of fuel for running them, as to make them superior to all others. One can be seen in operation at the works, where all information respecting them can be obtained.

16v8 THOMAS SCOTT & CO.,

Farrand's New

AMALGAMATOR & SEPARATOR!

THIS UNRIVALLED MACHINE IS NOW IN OPERATION AT THE

Eureka Metallurgical Works,

Commercial Street, between Front and Davis,

WHERE ALL KINDS OF ORES ARE REDUCED AND SAMPLED.

Particular attention given to Sampling Copper Ores.

This Amalgamator is capable of doing double the amount of work of the ordinary pans, at a saving of one half of the power, and at a much less cost in the original purchase.

Another very important advantage connected with this machine is the fact that it may be cleaned in fifteen minutes, without removing the plates or any other portion of the machine.

Manufactured at the Miners' Foundry, San Francisco. All communications should be addressed to R. L. OGDEN, Agent.

Cor. Montgomery and California streets, San Francisco.

Advantages of Farrand's Amalgamator.

In offering this Amalgamator to the public, the inventor does not claim any new or scientific method of extracting the precious metals from the ores; he merely claims a new and simple combination of mechanical principles, whereby a great saving of power (full one-half in amount) is effected. The capacity of the machine varies with its size, the smallest, or prospecting size, will reduce 300lbs. in three hours, and can be easily worked by the power of one man. The largest size will work 1,500lbs. every three hours, or six tons in 24 hours, with an application of a trifle more than one-horse power. This saving of power, as all mill-men are aware, is a very important consideration, particularly in localities where fuel is scarce. The power so saved in running the Amalgamators may be advantageously employed to an increase of stamps, and thus proportionally increasing the work of the mill. This machine consists of a semi-cylindrical, trough-shaped vessel, the interior of which is furnished with moveable concave dies, to be replaced when worn out, as in ordinary pans. The mullers are convex, and attached to a substantial rock shaft, by which they are moved back and forward by crank or eccentric motion. The mullers are held to their places by springs of moderate strength, the pressure of which may be easily regulated. The oscillating motion of the mullers serves to keep the pulp in a constant state of agitation, thoroughly mixing it and passing it under the mullers without resort to any of the various expedients employed in Pans where a circular motion is maintained. In working this Amalgamator no quicksilver is placed in the pulp until the trituration is completed. That done, the mullers are raised, so as to completely break contact with the dies, the quicksilver sprinkled into the mass and the machine set in motion again, the mullers simply acting as stirrers, which they do most effectual. The peculiar construction of this machine admits of its being worked with a much smaller charge of quicksilver, to any given amount of pulp than Pans. The spiral springs greatly assist in the work of reduction, by allowing the free admission of the pulp between the mullers and dies, so that the pulp is made to actually work upon itself—as the dust of the diamond is made to reduce the gem itself. The advantage derived of thus avoiding all trituration in the presence of quicksilver, must be apparent to every one at all acquainted with gold or silver amalgamating. Trials made with this machine in the presence of experts, during the last four months, have been pronounced highly satisfactory. It is peculiarly well adapted to employment by small mining operators in distant localities, as it can readily be taken to pieces and packed upon mules. It is intended to construct a large size machine, without dies or mullers, but simply with arms, to act as stirrers; said machine to be used in connection with several of the Amalgamators as a "Separator," as it is found that the peculiar motion given to these arms, in connection with the concave shape of the body of the machine, renders it most effectual for such a purpose. WM. D. FARRAND.

17-1m San Francisco, March 28th, 1864.

SILVER MOUNTAIN.—Mr. Slavan arrived in Stockton yesterday from Silver Mountain. He reports four feet of snow on the summit, and a perfectly clear road as far eastward as fourteen miles from the Big trees. Times are looking up at Silver Mountain. Two more quartz mills are in course of erection for custom work. The rock in the Lady Franklin and Lady Washington mines has been tested by tons by the working process, and pays in the first $240, in the second $100 per ton. The Lady Washington rock is in high favor with Virginia City miners. The average width of these veins at a depth of forty feet is 10 feet, and as they descend the rock grows richer. Mr. Slavan is building a sawmill on the Mokelumne, some eight miles west of Silver Mountain, in the sugar pine region. It will supply the new towns in the mines with the best quality of lumber. The timber on the eastern side of the mountains is all pitch pine, though it is in endless quantity. The Big Tree road will require the labor of 150 men for six or seven weeks to finish it as far as Silver Mountain. As far as now completed, Mr. Slavan pronounces this one of the very best wagon roads in the State.—[*Stockton Independent.*

THE ALLEGED PETROLEUM DISCOVERY IN MICHIGAN. The petroleum oil discovery at Albiou, is pronounced a humbug by the *Jackson Eagle.* It says: "A gentleman of reliability and standing informs us that a friend of his who has had much experience among the oil districts of Pennsylvania, and is, moreover, a man of thorough scientific attainments, has just completed a personal investigation of the Albion oil wells, and unhesitatingly pronounces them to be a shallow humbug, gotten up probably for speculating purposes. He states that the oil which is taken from the wells or springs is not a refined article!

A RICH DISCOVERY.—The Nevada Gazette learns that a few days since a valuable quicksilver mine was discovered at or near French Corral, in Nevada County. It is said that a man while digging in a garden accidentally made the discovery. The vein is said to be very rich, yielding more than 95 per cent of the pure metal. The Gazette understands that the excitement incident to this discovery was immense, and that the whole town was "taken up in a few minutes after the discovery was made known.

A three-mile race on snow shoes, took place at Montreal on the 13th of February. Mr. Malthy, who won the prize, made the three miles in twenty four minutes.

Important to Californians.—Many inventors have lately had their claims for Patents seriously (and in some cases fatally) delayed by the unqualification of agents who have not complied with the Government license and revenue laws, as well as other new and imperative regulations. These discrepancies, although arising from the inexperience of honest agents, are none the less dangerous to applicants for patents, whose safest course is to trust their business with none but active and experienced solicitors. THE MINING AND SCIENTIFIC PRESS PATENT AGENCY has strictly complied with the requisitions of the Department, and properly filed all necessary papers as Claim Agents.

WIRE ROPE MANUFACTURERS.

Established 1857.

Office, No. 412 Clay street—Works, North Beach,

SAN FRANCISCO.

After seven years' use throughout the State of California and the Pacific Coast generally, we can confidently recommend Wire Rope for

HOISTING FROM DEEP MINES,
GUY ROPES FOR DERRICKS, &c.,
STANDING RIGGING FOR SHIPS,
FERRY ROPES FOR FERRIES,
SASH CORD FOR WINDOW SASHES.
ETC., ETC., ETC., ETC., ETC., ETC

It being Cheaper, Stronger, Lighter and More Durable than any other kind of Rope, and not stretching or shrinking by atmospheric changes.

MINING COMPANIES, by using it for Hoisting Purposes, save 66 per cent. on their outlay for other ropes.

Wire Fencing Strand,

For fencing large parcels of land—permanently, economically and expeditiously. Manufactured in any length desired.

Pamphlets containing weight, strength and price, forwarded free application to the Manufacturers.

WIRE SUSPENSION BRIDGES AND AQUEDUCTS

We are prepared to erect, of any span and capacity, and take pleasure in referring those interested to the many structures of this kind built by us in California, Oregon and British Columbia, of span from 200 to 400 feet. 3-3m

IMPROVED WATER-WHEEL,

—PATENTED BY—

John Tyler, West Lebanon, N. H.

GIVING THE MAXIMUM POWER WITH THE MINIMUN COST—HAVING THE FOLLOWING AS SOME OF ITS ADVANTAGES OVER OTHERS—GIVING THE BEST PER CENTAGE OF WATER USED, DURABILITY.

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—It can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 500 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,
15v8-3m Golden State Iron Works, San Francisco.

WHEELER'S

Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same yat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.
*** These Pans may be seen in daily operation at the Miners, Foundry, on First street, San Francisco, where all interested are invited to call and examine for themselves.
no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surface to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.
sep21

BUSINESS DIRECTORY OF SAN FRANCISCO.—Messrs. Stillwell & Co. are said to be meeting with excellent success with their important undertaking, and the public will soon be furnished with a conveniently arranged book, containing the advertising cards of our leading firms, with a historical sketch of each upon the opposite pages.

Worth Considering.—Advertising has proved the medium of success to many of the most prominent business men of the world. Merchants, Inventors, Builders, Patentees, Manufacturers, Foundrymen, Machinists, and, in fact, all who wish to call the particular attention of the Mining, Professional, Mechanical and Industrial members of the community to their business, should not fail to advertise in the MINING AND SCIENTIFIC PRESS. The circulation of the paper is extensive, and has a wide range, reaching the most intelligent readers in every mining settlement of importance on the coast. A large number of copies are also sent East. Our terms are reasonable. "Live and help live" we believe to be a sensible motto.

How to make your Remittances.—In most of the mining towns, brokers will furnish checks on San Francisco at par, (or at a very slight advance) to those who wish to pay us for subscriptions, advertising, mining blanks, etc. When it is more convenient, money may be remitted by mail at our risk if the parties sending will register their letters. Money sent by mail is seldom lost if properly enclosed. An excellent method is that of opening the layers of a card, placing the coins between the layers and sealing the edges together.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from defective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, HAVING completed arrangements for its manufacture at the Fulton Foundry, in this city, now offers it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at

WHALER & THAYER'S REDUCTION WORKS,
NORTH BEACH, SAN FRANCISCO,

To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.

This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to

HUNGERFORD & PRATER, Proprietors.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

And in accordance with law, and an order of the Board of Trustees, made on the 6th day of April, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the salesroom of John Middleton & Son, No. 400 Montgomery street, on the 16th day of May, 1864, at the hour of 12 o'clock M. of said duty, to pay said delinquent asses sment thereon, together with costs of advertising and expenses of the sale.

T. L. BIBBINS, Secretary *pro tem.*

Office, 302 Montgomery street, San Francisco, Cal.
San Francisco, April 16th, 1864. 16-4t

The MINING AND SCIENTIFIC PRESS comes to us enlarged to double its old dimensions, and otherwise improved. The PRESS is the only journal on this coast devoted exclusively to mining and scientific matters, and should be read by miners everywhere. It is published weekly, at $5 per year.—*Oroville Union.*

Billett Gold and Silver Mining Company—Office, 509 Clay street, San Francisco, California, April 16th, 1864.—Whereas the Board of Trustees of the Billett Gold and Silver Mining Company, at a meeting duly called and held on the 5th day of March, A. D. 1864, directed, by vote, that an assessment of twelve and one-half (12½) cents per share be, and the same was thereby levied and assessed, on each and every share of the capital stock of the said Billett Gold and Silver Mining Company, payable immediately, in gold and silver coin of the United States, and that the Secretary of the said Billett Gold and Silver Mining Company sell the delinquent stock, first advertising the same for thirty (30) days, according to law, after causing notice of said assessment to be published according to law and the by-laws of the said Company; and whereas notice of said assessment has been published according to law and the order aforesaid, and the following named shareholders have made default in the payment of said assessment in the number of shares held by them, and set against their names respectively, as follows—to wit:

	Shares.	Amount.
A. Bryant	149	$18 63
Levi Lee	30	3 75
James Lefferts	5	62
M H Miller	20	2 50
A T Nesbit	10	1 25
James Billett	217	27 13

Enterprise Copper Mining Company, Placer County, Cal.—Office 645 Clay street, San Francisco.—At a meeting of the Board of Trustees of this Company, held March 12th, 1864, an assessment (No. 12) of 50 cents per share was levied upon each and every share of the capital stock of said Company, payable immediately, in gold coin, to Thos. Levy, Treasurer, at Lincoln, Placer county, or to the Secretary, at the office of the Company. The Board also gives notice that whatever assessments have been paid in on Numbers 7 to 11 inclusive will be credited on Assessment No. 12. By order of the Board of Trustees. M. G. ELMORE, Sec'y.

San Francisco, March 12th, 1864. 14-tf

Roderick Gold and Silver Mining Company, Reese River Mining District, N. T.—Notice is hereby given, that at a meeting of the Board of Trustees of the above named Company, held this day (March 31st, 1864,) at the office of the Company, an Assessment of two dollars ($2) per share was levied on each and every share of the capital stock of said Company, payable immediately, in gold coin, at the office of the Secretary, No. 224 Montgomery street, San Francisco, or to Julius Siehel, Corresponding Secretary, at Austin, N. T. WM. T. ATWOOD, Secretary.

San Francisco, March 31, 1864. 14-4t

Index Mining Company (Location, Copper Canon District, Copperopolis, Cal.)—Office, 415 Montgomery street, San Francisco, March 30, 1864.—Notice is hereby given, that at a meeting of the Board of Trustees of the Index Mining Company, held March 23, 1864, an Assessment of fifty cents per share was levied upon the capital stock of the Company, and made due and payable immediately, in U. S. coin, to the Secretary, at the office of the Company. Certificates of stock are now ready for delivery on payment of this assessment.

☞ The first annual meeting of the Stockholders of the Index Mining Company will be held at the office of the Company on SATURDAY EVENING, APRIL 30, 1864, at 8 o'clock, for the adoption of by-laws, election of Trustees for the ensuing year, etc. By order of the Board of Trustees. [14-5t] RICHARD C. ALDEN, Sec'y.

The Daily Evening Express, at Victoria, Vancouver Island is published by Messrs Wallace, Allen & Hardyngc. Terms of subscription: One year, by mail, $10; six months, $6. It contains the late, Mining, Commercial, and General News, up to the hour of going to press. Being the ONLY EVENING PAPER published in Victoria, and having a circulation equal to any other Journal in the Colony, it will be found an excellent medium to enable advertisers to bring their notices before the Public. W. H. TOBEY,

Agent, Government House, San Francisco. 15-tf

CAUTION.—Parties incorporating mining companies, who desire the choice of advertising in either a daily or weekly newspaper, should be particular to cross out the word "daily" when using the form of blank by-laws sold by the stationers of this city.

Office of the Eureka Mining Company, Location of Works, Mineral Spring Mining district, County of Calaveras and State of California.

Notice is hereby given, that at a meeting of the Trustees of said Company, held on the 12th day of April, 1864, an Assessment of 20 cents per share was levied upon the Capital Stock of said Company, payable on the 16th day of April 1864 in United States Gold Coin, to the Secretary, at the Office of the Company, No. 625 Clay St., San Francisco, California.

Any stock upon which said Assessment shall remain unpaid on the 14th day of May, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 30th day of May, 1864, to pay the delinquent Assessment, together with costs of Advertising and expenses of the sale.

C. W. HAYDEN, Sec'y.

Office, at No. 625 Clay Street, San Francisco, California. 16-4t

D. B. FRANCIS, Secretary,
17-4t Office, 509 Clay street, San Francisco.

We have received the first number of the eighth volume of this interesting paper. It is now under the control of friend Dewey, and has been enlarged to sixteen pages. We commend it to miners, stock dealers, and others taking an interest in the development of the mineral lands of this State. It can be had for $5 a year, and if preserved will make two volumes of interesting matter, containing 416 pages each.—*Red Bluff Independent*

Samantha Consolidated Gold & Silver Mining Company, Reese River District, N. T.

Lewis Consolidated Gold & Silver Mining Company, Reese River District, N. T.

Memphis Gold & Silver Mining Company, Reese River District, N. T.

John J. Crittenden Gold & Silver Mining Company, Reese River District, N. T.

Grafton Gold & Silver Mining Company, Reese River District, N. T.

Tehama Gold & Silver Mining Company, Reese River District, N. T.

Notice is hereby given, that, in accordance with the laws of the State of California, and in pursuance of orders made by the respective Boards of Trustees of the above named Companies, at meetings held on the 19th day or October, A. D. 1863, a sufficient number of shares of the capital stock of each of the above Companies, standing in the names of the following persons, will be sold at Public Auction, to the highest bidder, at the salesroom of Jerome Rice & Company, Number 327 Montgomery street, in the city and county of San Francisco, on WEDNESDAY, the 25th day of May, A. D. 1864, at 11 o'clock A. M. of that day, to pay Assessment No. 1 of each of them, of twenty-five cents per share all levied on the 19th day of October, A. D. 1863, due and delinquent, together with all costs accruing from advertising, sale, etc., if no, previously paid.

D. B. FRANCIS, Secretary.
17-4t Office, 509 Clay street, San Francisco.

Sonoma County Gold, Silver and Copper Mining Company, Cloverdale District, Sonoma county, California.

Notice.—There are delinquent, upon the following described stock, on account of Assessment levied on the 15th day of January, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amt.
W. S. Pearson		100	$10 00
O. P. Swift	75, 76, 77, 78, 79, 80, 81, 82	208	28 80
E. Swift (4th & 5th asst)	11, 61, 62, 64, 89	221	44 20
H. A. Thomas (4th and 5th asst)		55 8	1 60
H. T. Graves (4th and 5th asst)		9 10	2 00

And in accordance with law, and an order of the Board of Trustees, made on the 14th day of April, 1864, so many shares of each parcel of said stock as may be necessary, will be sold, at the salesroom of Jerome Rice & Co., on the 16th day of May, 1864, at the hour of 11 o'clock A. M. of said day, to pay said delinquent Assessment thereon, together with costs of advertising and expenses of the sale.

A. B. CRAVES, Secretary.
17-4t Office, 412 Clay street, San Francisco, Cal.

Whitton Gold and Silver Mining Company, Silver Mountain, Alpine county, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 20th day of April, 1864, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable immediately to the Secretary, J. Warren Clark, 430 Montgomery street, San Francisco, (Room No. 5, 3d floor) or to S. A. Bartlett, Treasurer, Silver Mountain.

Any stock upon which said Assessment shall remain unpaid on the 21st day of May, 1864, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 9th day of June, 1864, to pay the delinquent Assessment, together with the costs of Advertising and expenses of sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.
Office, 430 Montgomery street, San Francisco.

Rubicon Gold & Silver Mining Company No. 1.— Location of mine, Keys District, Owens River, Mono county, California.

Notice is hereby given, that, in accordance with the laws of the State of California, and an order duly made by the Board of Trustees of the Rubicon Gold and Silver Mining Company No. 1, there will be sold, at Public Auction, to the highest bidder, for cash, in United States gold coin, on the 24th day of May, 1864, at 11 o'clock A. M. of that day, at the office of the Company, No. 7 and 8, third floor, No. 302 Montgomery street, San Francisco, so many shares of the capital stock of the Company standing in the names of the following persons, or shareholders, as will be necessary for the payment of Assessment No. 4, of ten (10) cents per share, duly levied thereon February 27th, 1864, by the Board of Trustees, together with the expenses of advertisement and sale, unless said assessment and accruing charges are previously paid.

Mining and Scientific Press.

A Mining Journal--Devoted to News, Art, Science and Progress.

VOLUME VIII. SAN FRANCISCO, SATURDAY, APRIL 30, 1864. NUMBER 18.

Contents:

No. 18—April 30, 1864—Contains twenty pages.—Rise and Progress of Free Schools in San Francisco; List of Mining Notices; The Formation of Metallic Veins; More of the "One Ledge" Theory; California Developments; From a Sage Brush Miner; Washoe Stock Market; Record of Incorporations; City Stock Report of the Various Boards for the Week; Mining Gossip—containing latest items from important mines; Mechanical—Modern Typographic Improvements, The Type-Revolving Principle, Russell's Automatic Printing Machine; Practical Mining—Answer to Mining Problem; Patents and New Inventions; Scovill's New Quartz Mill; Editorial Items; The Strange Fish; Mining Share Market; The Industrial Fair; The Crops and Dry Winds; Reese River—No. 3; A New Theater; The La Trobe Tunnel; Wrought Iron vs. Cast Iron for Pan Bottoms; Sage Brush for Steam Fuel; Etc.

Rise and Progress of Free Schools in San Francisco.

BY A SPECIAL CONTRIBUTOR.

Our Fire Department has been justly lauded as being the best in the world. It is, in fact, regarded as a nearly perfect institution; and so it is. But our Free School system constitutes *the* feature of our civil and social state. And though it has been unfolded in our midst, and grown up under our own eyes, in all the necessary common-place of old familiarity, yet to an intelligent and discriminating observer it is full of interest. In very truth, one of the most beautiful histories in the world is that of the Free Schools of San Francisco. To trace this history, is to record a growth of opposite and seemingly unreconcilable characters. Our public schools have come forth with the suddenness of a mushroom almost miraculously matured into the strength and majesty of a gigantic oak. To quote the words of Frank Soulé, in his beautiful and poetic "Annals," "San Francisco has skipped through, or over, its collonial stage, and grown from hamlet to village, from village to town, and from town to city; from the little school house in the forest, to the brick village building with a bell, to the orderly, well arranged grammar school, to the dignified and stately university. It has burst upon the world, a new star in the firmament of glories—the Adam of a new creation. Its history has no centuries of toil; its stages were epbemeral. There was a fierce struggle of intellect with passion—three days of battle and pillage, and a glorious victory of man's high estate. Here, improvements, begun elsewhere, are perfected, and that done rapidly which has been gained slowly. The schools here are not inferior to the world renowned and years-old systems of Pennsylvania and the Eastern States."

And if this was true in 1855, how much more it is true now the records and reports of every year will show. These exhibit a constant and rapid ascent, from the small and insignificant beginning, to the noble altitude and expansion of to-day.

The first American school of any kind was established by a Mr. Marston, who having obtained a small shanty in a block between Broadway and Pacific street, west of Dupont, opened his doors in April, 1847, for the reception of pupils. He gathered a school of twenty or thirty and continued to teach them for nearly a year, the parents paying for the tuition of their children. And though Mr. Marston had few requisites for one of his high calling, he yet demonstrated one thing which had not before been so clearly shown—the possibility and propriety of sustaining a school. Accordingly the so-far enlightened people began to stir themselves, and late in the year of 1847 they built a school house on the south-west corner of Portsmouth Square, fronting on Clay street at its present junction with Brenham Place. Humble as the building was, it yet subserved important purposes. Every enterprise that had no place elsewhere, found "local habitation" in "the schoolhouse." It was a universal public hall for political, religious, military, or benevolent purposes. There wide-mouthed laughter hailed the crude amusements of the times, and meek-eyed piety listened with glowing cheek and heaving heart to many a stirring exhortation. There also sat judge Almond, carving out the knotiest cases in the "Proceedings" of a few minutes, and settling affairs between man and man in quite a patriarchal and primitive manner. At length, after having done all this good service in its day and generation, it was itself indicted, as a cumberer of the ground, sentenced to be removed, and accordingly pulled down. Not a plank, not a splinter remains to tell us of the old school house, unpretending and humble, yet of excellent and many ministries, and "its site is only recognized by the thousand cherished associations, that hover, like spirits, around its unmarked grave."

[Written for the Mining and Scientific Press.]

THE FORMATION OF METALLIC VEINS.

NUMBER I.

BY EDWARD A. MILES.

It is a common axiom concerning veins containing the more valuable metals, that their ruling divinity is chance, and that no one can correctly foretell their eventual failure or success. Believing that among all the linked atoms of the universe there exists nothing which is not operated upon or guided by some untiring, simple law of the Great Creator, plainly and deeply marked out in the material form and composition, and moreover readily revealed to those who clearly study its various associations and complications with other laws, the writer can but look upon the careless theory of chance as the offspring of baffled and superficial investigation. He is confident that, ere long, the earnest application of thought and enquiry will unveil the most abstruse mysteries of such deposits, and regulate their working by scientific rules as perfect as mathematical demonstrations. In order to partially dispel a fatuity of belief that is continually encouraging the most desperate of financial risks and dragging the better class of mines under the gloom of wildcat failures, the writer proposes to show that there are certain laws governing the construction and existence of all metallic veins. In doing so, he will endeavor to develop the chief outlines of a theory of their birth.

The usual idea of the formation of metallic veins conceives the rending of the earth by great volcanic throes of heat, and the immediate filling of the fissures with melted quartz and metals. Some have fancifully shaped the source of the auriferous wealth of our own State into a monster stream or stratum of gold and quartz, underlying the chief mountain belt, and revealing its existence by a few cropping offshoots at the surface. On the evidences of much observation, and the close study of quartz and spar veins, the writer must doubt their intimate connection with subterranean fires and convulsions. Amidst all their different phases of form, they are too regularly moulded for such a mode of creation, and show none of the rude traces of convulsive upheavals; and the degree of heat sufficient to give quartz a molten condition would precedently volatilize all metals in contact with it, whereas the metallic endowment of veins is coequal with the quartz formation. Then, there are truly no more perceptible effects of great heat to be seen in the walls of a vein than at a distance. The usual appearances attributed to fiery action, are generally due to chemical changes, such as the scoriaceous resemblance given by a deposit of iron from solution on the walls. Another theory, first promulgated by the celebrated German geologist, Werner and founded upon close practical observation of the mines of his own country, maintained that all metallic veins occupied crevices or fissures, filled from the surface with dissolved veinstone and metals while reposing beneath the ocean. The regular distribution of metals, the close pinching as well as the widening of veins into chambers at successive depths, and many other phenomena which this theory could not plausibly explain, served to prevent its popular adoption. Undoubtedly Werner's theory approached much nearer to the truth than that assigning igneous origin to veins; but it rather recognized a single form of a primary cause, which is not general in its application to veins as the

ultimate effect; this the writer will hereafter endeavor to show.

The writer conceives that the rock of all metallic veins of distinct gangue, or matrix, whether the same be quartz, barytes, fluor, or calcareous spar, is formed by the gradual process of chemical and mineralogical decomposition and concentration through the agency of electricty, heat, vapors and water.

Original metalliferous collections as found in nature may be divided into two primary classes, the one possessing distinct stony matrices, differing from the enclosing walls in character and composition, and the other constituting those impregnations and aggregated masses and seams of metal distributed through or between mineral beds or dykes. Attention will be chiefly directed to the former, which with regard to form are designated *stockwerk* when forming small interlacing ramifications through bed rock; *segregated* or *crevice* veins when limited in depth, and true fissure veins when possessed of a regular and positive character, indefinite depths and at least moderate length. The peculiarities of the two former are sometimes united in the same vein, and also exist in appendages to the true vein, known as feeders, or spurs.

These veins are found in three different geological formations first; sedimentary, as limestone: second; metamorphic, as clay, talcose and micaceous slate: third; eruptive, as porphyry and granite. The two latter classes almost solely contain true fissure veins. By metamorphic rock, there is usually understood such sedimentary strata as are changed from their specific character by heat or chemical action, though eruptive rocks are, in part, similarly affected.

Alterations thus take place in rocks that not only revolutionize their mechanical, but also their mineralogical structures; limestone being variously metamorphosed into clay slates, talcose slates, etc. The changes wrought by heat are either directly mechanical, such as the tilting and slaty fracture or auxillary to chemical action, which creates effects by decomposition, aggregation and substitution of mineralogical forms. In case of joint decomposition and substitution there is often a double metamorphism; the material of one crystalline system being made to occupy the abandoned cavities of that of another. In this State, and more particularly in Nevada Territory, there exists every degree of this metamorphism, from the first remove of the elementary form to its very antithesis in appearance. The agent of these changes may be a feeble but constant streamlet, or a huge volcanic architype of vaporing and expiring wrath. The principal and greatest number of workable mines in the world are found connected with the metamorphic rocks; and, as a general thing, the particular stage of metamorphism is an index of the character and quality of the veins, particularly where, as often occurs, there are many classifications of these changes in one locality.

Volcanos that scatter their dry and fluid materials far and wide, are few indeed to the multitude of erupted streams or dykes that have cleaved a way to the surface, distant from the wild disorder of these great vent holes of the interior earth. Each geological age has its own system of excreted rocks, characteristic in color, structure and combination, whereby the geologist can approximately determine the era of their formation. Constancy of direction is also often discoverable in the dykes of certain periods, regulated, perhaps, by the then magnetic poles of the earth. They are found in quite a variety of forms, and sometimes pass from one character into that of another. The chief minerals of the erupted rocks are feldspar, constituting the greater share, hornblende, mica and quartz. All of the three first named minerals contain full fifty per cent of silica, considerable alumina, and some oxide of iron, to which there is an addition of either soda or potash in the feldspar, of potash or magnesia in the mica, and of lime and magnesia in the hornblende. Slight quantities of other substances, such as magnesia, fluorine, etc., also enter into the composition of varieties of the same species of rocks. Silica or quartz forms full one-half of the material of erupted rocks, but never independent of an intimate mixture with other elements, and is readily reduced to a fluid state by hot saline or alkaline solutions. Alumini, the oxide of the metal aluminum, as the base of clay, is quite common in or near quartz veins as interal bands or linings of the walls. Potassium, the metalic base of potash, is an important auxilliary of chemists' in obtaining solutions of silica. Sodium is also used to accomplish the same object. The affiliations of lime and magnesia shall be hereafter noticed.

It may be taken as an axiom, too apparent for doubt, that all true veins of quartz are due to the intrusion of the eruptive rocks among earlier formations. They may be either outbursts of trap, granite, or porphyry, or mere overflows of basaltic porphyry somewhat removed from the internal source. In direct contact with the sedimentary and other erupted rocks, it is probable that an upheaval took place, in which all openings produced by the distension of the strata were filled with the same hot fluid material, and that the shrinkage caused by the act of cooling created other fissures that eventually contained quartz or spar veins. If quartz had been simultaneously injected, there would always be found a perceptible shrinkage, graduated by the width of the mass; of this there are no signs. During the slow process of cooling of the erupted rock, it cannot be supposed that the usual operations of nature were suspended; consequently heated water and steam must have come in contact with the dykes, and by the assistance of their alkaline potash and soda, and possible saline presence, produced decomposition of the feldspars and other minerals and the rapid transference of the silica to the discharging fissures. In this manner some of the original secondary fissures may have been entirely filled, but it is evident, considering all their characteristics, that the majority of metallic veins have been of a slow progressive construction. It is most likely that after the first introduction of quartz in an open crystalline or a compact form on the walls of the fissures, and the cooling of the adjacent rock, that there supervened a slower accumulation simultaneous with the infusion of metals.

In case of a closely connected erupted dyke of porphyry, and a calcareous rock acted upon by an aqueous solution, the lime and carbon was dissolved out of the latter; this solution reacting upon the erupted rock, exchanged the lime for silica and magnesia, the latter being transferred to the limestone, while the silica divided between the veins and the limestone. This is not a supposable case, merely, but is plainly evident upon an examination of the rock surrounding all such veins; at least, it can be seen that the quartz and magnesia have been removed from the erupted rock and replaced by an equivalent quantity of lime or clay, while the sedimentary rock is metamorphosed into talcose slate, and the embodiment of the vein does not show a greater amount of quartz than has been removed from the dyke.

Decomposition and secondary deposition are ever going on in the reservoirs and arteries of nature, through the simple action of spring water, without the immediate aid of corrosive chemicals or heat. And these changes are constantly impressing their records on the rocky pages of our universe.

Besides producing veins, the solutions of silica have also in the later geological periods entered rocks of a loose, penetrable structure, such as beds of chalk and sandstone, transforming them into huge compact seliceous masses, often mistakenly designated gigantic quartz veins. It is only by the chemical mode of formation that the spar veins of calcareous composition found in or near limestone beds and the slates derived therefrom can be accounted for. The spars are also largely present in many true fissure veins, either mingled with the quartz or arranged as separate bands of crystalization. The impure forms of elements, elsewhere rarely discoverable, barium and fluor spar, separately only exist in narrow veins and limited to certain mineralogical positions, whence may be deduced their derivation from sources of minute distribution. The primary form of many veinstones appears to be that of crystals, which as the natural and progressive development of elements accrete matter with beautiful symetry and according to fixed laws, when free to do so, but under counteracting influences secure only deformity and their own sepulture. They readily establish their bases on the rough surfaces of other material, with their points turned outward, or from the walls of a lode toward the center, and a foreign substance accidentally introduced secures its own zone of crystallization following the same laws of direction. Small angular fragments of wall rock are sometimes seen interspersed amid the solid quartz of a vein, while large pieces, known in mining parlance as "horses," are not uncommon.

In the Galena veins, of Wales, the miners often find imbedded fossils from the walls. In the writer's possession is a specimen from an argentiferous vein; that part which has been attached to the walls is a compact fluor spar, but its interior face consists of long slender quartz crystals attached to a flake like base. Amid these latter the fluor spar has pushed out three broad, perfect proportioned crystals, of its own composition, the largest of which has succeeded in imbedding some of the quartz crystals in its encroaching sides. No theory of hasty or igneous birth can explain these succeeding constructions.

It is doubtful if more than a parting line or crack is necessary in the embryo state of veins, particularly in certain readily decomposed rocks. There are quartz veins indicating a compact mode of formation by transfusion or direct substitution of silica for some element removed, in which case their walls are in a transition or semi-selicious state, and not always clearly separable from the veinstone.

In other cases, it is evident that one or both walls of the fissure are continually undergoing a slow decomposition, thereby allowing an increased width of veinstone. This will explain the great widths of many of the older veins. Many of the quartz veins of Washoe, in the greenstone porphyry, run down into a compound network of pure quartz, dividing and enclosing portions of the bed rock. By careful selection, specimens of every grade of the separation and alteration can be obtained, from those but little changed and merely parted by small branches of silica, to those showing considerable aggregated quartz, encasing rotten particles of lime like rock.

The bed rocks adjoining veins are often so much decomposed and altered by chemical substitution at water level as to render it difficult to recoguize their original character.

The walls of the granite encased ledges of the Reese River mines show many degrees of decomposition and metamorphism, much of the mica and feldspar being replaced by quartz or lime near the dry surface, and lower down by alumina, while the structural appearance still resembles granite. But in the porphyries of Washoe the corresponding changes are often so great as to give the rock a very distant likeness to the original.

Through the unequal action of the same operation in crystalline rocks, possessing different degrees of hardness, arise those bunches peculiar to veins of that class. It is noticable that in true fissure veins and sometimes, also, in segregated veins, that the descending dip is toward the crest of the mountains. This can be accounted for by supposing the axis of disturbance to have been near the central heart of the range, and that the outbursting forces on dykes sought the angle of least resistance, thereby cutting across the line of stratification. The rocky masses of a mountain may be compared to a series of arches within one another; but one (the apex) line, through equal thicknessses of rock will be perpendicular, all the rest form angles with it. Segregated veins exist between the lines of stratification of the metamorphic rocks, and dip with them. True fissure veins also follow positive lines of direction which are in parallelism with their own system of eruptnd dykes. Segregated veins, resulting from the shallow or imperfect fracture of rocks, and weak eruptive power, are generally found in thick clusters

[To be Continued.]

More of the "Ons Ledge" Theory.

Messrs. Editors:—Knowing that anything relating to the mines in this vicinity will interest a large number of your readers, I will give you a few of the observations made after personal explorations in the tunnels of a large number of the noted mines in this district.

Being one of a number of gentlemen invited by the Superintendent of the North Potosi mine to visit their works and examine their tunnel, I will give you a few items which may prove interesting to your readers. After entering the main tunnel, which runs directly west, and going in a distance of 1,000 feet, we came to where the company first found indications of their present ledge, for which the Savage and North Potosi Co.'s are now contending. Here we found the same encased between two clearly defined walls, and from four to five feet in width. Following this ledge, which runs in a northerly direction, and is gradually widening for a distance of seventy-five feet, we came to drift A; here the ledge rapidly widens. After examining this drift, which has been sunk for the purpose of more minutely defining the ledge, we came back to the main tunnel. We now leave drift A, and go directly north 55 feet, until we come to drift B, where the pay rock widens, and the walls of the ledge are more clearly defined. Following the main ledge, and passing drifts C and D, we came to drift E. Here the workmen of the North Potosi, on running a drift through their east wall, suddenly struck a large body of water; but the west casing of the Potosi ledge kept this body of water from running into the works of the Savage. From drift E to the point where the Savage Company have laid their injunction on the North Potosi, restraining them from further developments, the ledge widens, and is more clearly defined. The west wall crosses the main tunnel 25 feet north of drift E, which leaves us again on the Potosi claim. On the whole 1,200 feet claimed by the North Potosi Company, the ledge and casings are as clearly defined as any in the Territory.

It is contended by scientific gentlemen, that the

west wall of the North Potosi is merely a strata running through from the Savage claim. On our trip we entered all the drifts which the North Potosi has driven for the purpose of developing their claim. In going west through the drifts of the North Potosi, we passed through large bodies of porphyritic rock, intermixed with deposits of silica. In one of the drifts running 350 feet west from the main tunnel of the North Potosi, we came to what is generally known as the red or black ledge, which is better defined than either the ledges of the Savage or North Potosi. From the observations made, it seems clear that there must be more than either one, two, or three ledges; and I think that it only requires time to prove the existence of numerous ledges, all located and running parallel with each other.

There are a limited number of mining companies here who are continually advocating and giving prominence to the one ledge theory. If this principle was recognized, it would be a blow fatal alike to Washoe and the country at large. There are several hundred claims located on different ledges in this district, each one rich in precious metals, and the ore from each presenting an entirely different appearance from that of the other. Now if a company that claims preference on account of the early date of location, can absorb all the other claims because the one-ledge principle is recognized, mines and mining in this region would receive a check from which the country could never recover.

My attention has been particularly attracted to this subject on account of the difficulty existing between the North Potosi and Savage Companies. The Savage Co. claim that the ledge of the North Pososi is but a mere strata of their claim; but if this strata is so clearly traced for the 1,200 feet that we examined, and is not a separate and distinct ledge, then it is one of the largest and best defined spurs that has yet been discovered. Having been furnished with a map before entering the mine, it appeared, on examining the position of the Savage and other claims, that there must be more than one ledge, and the opinions of the gentlemen who accompanied the party corroborated my views. Then, if there is any probability of the Savage and Potosi claims coming in contact, it must be where the west wall of the Potosi has not yet been prospected, on account of the injunction laid by the Savage Co. There is another very strong argument in favor of the Potosi's claim, as it is a well established fact that water will penetrate and make its way through perforated rock and decomposed quartz, it seems strange that this body of water never penetrated any of the shafts or drifts of the Savage; for if there was no wall or barrier between the two claims, the Savage, in their various drifts, ought to have struck this water. Even after the water entered the Potosi tunnel from the east, the west wall kept it from going through on the Savage Co.'s works.

ONSENYEN.

VIRGINIA CITY, N. T., April 25th, 1864.

California Developments.

THE BLUE LEDGE, EL DORADO COUNTY.

MESSRS. EDITORS:—Having within the last few weeks returned from a visit to the above mine, I will endeavor, in as few words as possible, to tell your readers what I saw there. To a large and growing class it will be interesting as it will set forth another proof of the truth of the doctrine, pregnant with the future prosperity and growth of the State, that here, at our doors, are non-developed sources of boundless wealth, inviting the hand of intelligent industry to open them up for the benefit not only of those immediately concerned, but for that of the State, and even the world at large. Starting from Coloma, and crossing the south fork of the American river, seven miles of hilly travel brings you, by way of Spanish Flat, to the Blue Ledge mine. Every step of the way over which you journey teems with evidences of the millions of treasure yielded in the high and palmy, but now nearly dead and gone days of placer mining. The extent of the company's claim on the ledge is a mile and a-half. Along the greater portion of this extent the following work has been done:

Shaft No. 5, sank about 2,000 feet from the northern limit of the claim, is forty-four feet deep, and to water line. A drift has been started at 32 feet depth, from which pay rock has been taken to the amount of 300 or 400 tons. Work is still progressing in this drift, the vein showing a width varying from twelve inches to four feet. The next is shaft No. 4, 60 feet deep, with work temporarily suspended; 30 tons of rock out. In shaft No. 3 the ledge is much broken up. Work is suspended here also; for reasons hereinafter given. Shaft No. 2 is 61 feet to platform and drift, and 71 to water; about 250 tons of rock have been taken from this shaft. The ledge in the drift connected with this shaft averages about two feet wide. Shaft No. 1, nearest the southern limit of the claim, is down 55 feet; drifting is in progress in two directions, developing about a two-foot vein; 150 tons of very good-looking rock have been taken out at this shaft.

A tunnel has been commenced at the southern extremity of the claim, running in upon the vein, and by which the same will be drained to a depth of 800 feet at the northern extremity. It will be used eventually for taking out ore, as it is in contemplation to erect a mill near its mouth. About 80 tons of ore have already been taken from the tunnel, which is in 200 feet. Another tunnel of 220 feet has just struck what is supposed to be the ledge, about midway, at a higher level. This latter tunnel will drain the upper shafts, so that work upon them may be continued. The ledge has been opened up on the surface near its northern extreme, and some 2,000 feet north of shaft No. 5. It is well developed, as continuous, throughout the whole extent of the claim—7,800 feet.

A lot of 2,400 lbs. of selected rock from this mine, crushed at the metallurgical works on Bryant street, in this city, yielded between $800 and $900. Some very fine specimens have been taken out. The rock is of a bluish, gray color, brittle, full of dark seams, which contain a large portion of the gold. Specimens which show no gold to the naked eye, yield a handsome show in the pan after being crushed. The ledge dips east at about 45 degrees. A tract of 800 acres of fine wood land has been secured for the benefit of the company. Any desirable amount of water-power can be obtained convenient to the southern extremity of the mine—enough to run a dozen mills.

For present purposes, a 20-stamp steam mill is now being erected, convenient for the mine. This mill is constructed very much after the same plan as the Real del Monte at Aurora, but is a horizontal one, and is being built by the same parties—the proprietors of the Miners' Foundry, of this city. The mill will be in operation on Monday next. The work is being done under the immediate direction of Mr. R. M. Pease, who also superintended the erection of the Real del Monte. The mill will be furnished with Varney's latest improved pans. Should the anticipations with regard to the yield of the mine be anything like fully realized, another mill of double the capacity of this will be put up. A pleasing consideration, to the stockholders at least, is the fact that when the mill starts, its first proceeds will go to make up dividends, instead of to pay off old debts.

In closing, I would remark that the Blue Ledge is not the only claim in that region of which Coloma is the center. The General Grant, the Plymouth, the Gopher, Indiana, Kelsey, etc., may well be named as fine ledges, and only need capital to develop them. A pleasant journey of only twenty-four hours will take any one from this city to the Blue Ledge. It is to be hoped that such success will attend the present enterprise as will encourage capitalists to come forward and open up other promising claims in this and many other mining districts in the State, which are now forsaken for the greater enchantments which distance alone adds to their merits and surroundings.

A. C. I.

HOW IT LOOKS.—We notice that the appearance of the *Argus*, last Saturday, was greeted with the dignified welcome usually extended by the old leading dailies of this city to such minor enterprises; as though it were unbecoming in them to extend common courtesy to a neighbor. If the *Argus* had been started in Horsetown, or some other distant mining town, it would not have been so coldly laid aside by the "big dailies." As straws show the direction of the wind, such discourtesy unroofs the littleness of men's souls. All right, gentlemen; but "how it looks!"

PARTLY SETTLED.—The case of Hall McAllister *vs.* John G. Shirts was called up before Judge Sawyer, on the 25th inst., when an order directing the plaintiff in the case to pay the Clerk of the Court the moneys and stock now in his hands, was issued, the same not to be paid out by the Clerk until plaintiff is protected from all further attachments. The full particulars respecting this case we gave our readers in our edition of April 16th.

[Written for the Mining and Scientific Press.]

From a Sage Brush Miner.

EDITORS PRESS.—Here I am again, in the sage brush where I belong. I no more shame Montgomery street with my hideous presence, nor break my neck, perchance, in reading the glittering signs on either side. By the way, we have *signs* here. I mean not those that decorate the buildings on Main street in Austin, but those upon the hill-side—those unmistakable signs of labor which proclaim, "It is here!"

In the Reese River district but few claims, compared with the many, have been worked during the Winter, and those have fully proved to their lucky owners that they have not toiled in vain. I could refer to many, but as I have not, since I arrived here, had time to ramble far, I will only mention a few locations on Lauder Hill, just north of town. On visiting the North Star I was somewhat surprised to see the amount of work which had been done. Large piles of rock seemed waiting transportation. Teams were loading for the mill, and car load after car load of the precious metal was coming up from the mine to greet the gentlemanly owners, whose smiling faces told me their most sanguine expectations were being realized. The mine is now down to the depth of 200 feet and from two to four feet in width. The Oregon lode, a few rods farther north, may be considered its twin brother, for in promise and in actual yield it cannot be excelled in the district. To the east and upon the same line or belt of the above claims, is the Dacotah mine, from which large and encouraging results have been obtained; even by working process, over one dollar to the pound of ore has been produced. The incline or shaft is now down to the water line, or about 70 feet. A two foot ledge and steadily increasing in size, with rock resembling the North Star and Oregon, is positive assurance to the lucky men that hold it that their election is sure.

Various other claims are being worked, and considering the little that has been done on them, are exceedingly promising. Such as the Savage, Illinois, Douglas and the Kelly lodes require but to be sunk on a hundred feet or more to prove to the world that the Reese River lodes are not "razor backs," as some, more interested elsewhere, have termed them, but in reality mines that will repay largely those who do not place their expectations on the surface. It is true that hundreds of claims have been located in this and other districts, not worth the paper used in incorporating them; and such being the first thrown into market, it is no wonder that the public should be cautious, yet it does not follow that ours is a groundless pretension. Virginia had her share of *wildcat*, and still lives. Reese River, with her countless veins, has been proved, within the last Winter, to possess the main arteries that are to sustain and build her up in giant strength.

Our town, notwithstanding the lack of capital that is generally felt in new places at this season of the year, presents a lively appearance. The storms which have prevailed here for the last three weeks have retarded, in a measure, the business of many; but now all are actively engaged in preparing for the summer campaigns among the hills. Two or three of our mills are running, yet others, for various causes, are at present idle, but not because of no rock to crush, for there are hundreds of tons waiting at the different claims.

Our townsmen, in their good feeling as a progressive and order loving people, I understand, are soon to have a City Council. Good for Austin! Our neighboring districts have been attracting much attention. Union has many fine ledges; can boast of a plenty of wood and water, and has two flourishing little towns, Union and Ione City. Bunker Hill, some thirty miles south of this place, also claims her share of adventurers, and many claims have been found that bid fair to rank among the best; two town sites are also located there, and the world "goes marching on."

SAGE BRUSH.

AUSTIN, N. T., April 8th, 1864.

MAP OF COSO.—Mr. Warren Holt has laid upon our table a new map of the Coso mining district, which embraces within its limits Owen's lake and an extent of country contained in a radius of about fifteen miles east and south of this lake. The mines of this district are rapidly coming into notice and importance. This map has been drawn by Mr. A. W. Kiddie, of this city, and is neatly and distinctly executed.

WASHOE STOCK MARKET.

Review of the Week Ending April, 25, 1864.

Transactions in the Territorial Stock Boards, as we get them from the local papers, have been lighter than usual since our last report. We are indebted chiefly to the Gold Hill *News* for the following report. If the reporter of the *News* would embrace in his reports the business of the Virginia stocks, as well as those at Gold Hill, we presume the extra amount of labor expended would be duly appreciated by his readers generally as it certainly would by us.

Arrington has sold at from 3@3½; 500 shares of Boh Black have changed hands at $4.

Pony Express has been quite active; 401 shares having changed hands at from $5 to $7¾, closing at the latter figure.

Baltimore American has materially improved; 50 shares having been sold at from $51 to 58, closing at $60, buyer 30.

Boise and Reynolds' has sold at $2; Consolidated Brotherhood, at $1; Crown Point Ravine, at $6½; Colorado, from $5@5½; Belle Vernon, at $4¾; Burning Moscow, at $91; Branch Mint, $10@25.

Clinton & Hubbs, which last week sold at $25@26, took a material stride in public favor. We quote sales of 10 shares at $55.

Four hundred and fifty shares of Champion changed hands during the week at $2@3½, closing at $2.

Thirty shares Don Carlos sold at $5@8; 20 shares Deep Red at $5@7; 20 Excelsior at $15.

Sixty-five shares of Effingham have changed hands at from $1½@4; Champion has sold at from $2@3½; Challenge, at $1½@2½; Colorado, $6@7½.

Front Gold Hill is a new stock in the market. Thirty-five shares sold at $5@7 50, closing at $6.

Frankel has been inactive; $5 are bid for it but without sellers.

Sixty shares Gentry sold at figures from $1 50 to $3 25; 10 shares Globe sold at $14.

Golden Horn advanced during the week from 5½ to $8 50, but stopped on Wednesday at the former figure; one hundred and fifty-five shares changed hands.

Twenty shares Gilmore sold at $2@2 50; thirty Golden Eagle No. 1 at $7.

Grass Valley has sold for $55; fifteen shares of Gray and Cook changed hands at $70@75, closing at the former figure. Grass Valley and Napoleon is quoted at 50c.; Free and Easy at $2; Jenny Lind has weakened a little, and may be quoted at $2½.

Harper and Argus is still under a cloud. It rallied a little during the week, touching $9¼, but subsequently declined to $7, at which figure 50 shares were sold on Monday.

Jewett & Sheppard has rallied somewhat from the closing figures of last week, and may be quoted firm at from $27@30; one hundred and ninety shares have changed hands since our last, at from $24@30.

Seventy-five shares Jim McClellan brought from $1 to $1 25.

Sixty-five Kentucky sold at $4@5, closing at 4½.

Twenty shares Keystone No. 2 sold at $5½, a material decline.

King Solomon still continues to meet with considerable business, but at somewhat fluctuating rates; 272 shares have been sold since our last report, at from $1¾@3½.

Keystone, No. 2, has sold at $5½; La Motte, at $4½@5½; Minntonomah, at $10; La Mina del Alto at $1½.

Mary Ann has found a buyer at $115; legal tender at $16.

New Oregon declined early in the week to $8 50, but rallied again to $18 50, and closed at $14. Sales of 168 shares are noted at intermediate figures.

Napoloon, which last week reached $18 but subsequently dropped to $11, still farther declined to 8½, but subsequently rallied a little and closed at $12.

Naragansett has sold at $1½; Occidental con. at $2½.

The Overto still further advanced after our last quotations, and reached $20 on Thursday of last week, but subsequently declined to $15.

Pride of America lost its grip, twenty shares selling on Thursday at $6, and fifteen on Saturday at $6¼.

Thirty shares Palo Alto sold at $2 75@3 50; ten Pontiac at $1 50; sixty Richelieu at $5@6; eight Rock Island at $35@39.

Silver Vale advanced to $7 50, but declined to $4. Sixty-five shares sold at those and intermediate figures.

One hundred and twenty-five San Francisco at $3 @8, closing at $6½. Five Scott Consolidated at $1 50. Twenty Winegardner at $4@4 50. Thirty White and Sanders at $4. Yolo at $11@15.

Seneca—ten shares sold on Monday at $23, and on Tuesday ten at $28, and ten at $27½.

Santa Fe is quoted at $9½@10; Sunrise at $3.

San Francisco Stock and Exchange Board.—Prices Bid and Asked.

A Proposed Mining Tax.

The telegraph on Thursday announced an amendment to the Tax Bill, now under discussion in the House of Representatives at Washington, of 5 per cent. on the gross yield of all mines of gold, silver, and quicksilver. The indications are that the hill will pass the House. What its fate may be in the Senate is more uncertain. The exertions of the California delegation appear to have been of no avail in their efforts to save the country from this act of legislative folly. California makes no objection to being taxed equally, or even more heavily than any other State in the Union. Our only complaint is that the operation of this tax, even though it should be paid with the utmost promptness and willingness, will indirectly work a far greater pecuniary detriment to the Government than can possibly be remedied by the collected tax. If our Congressmen from the Atlantic States knew as much about the California mines as nine-tenths of the ordinary laborers in those mines, they would never push to a consummation the suicidal act which has been proposed. A tax of 5 per cent. on the gross yield of the mines will keep in the earth millions of treasure that would otherwise be put in circulation, and aid the Government in keeping up the credit of its immense and constantly increasing paper issues. More than half the bullion that is now coming from Washoe costs over 100 cents on the dollar to obtain it. To be sure it will not be so when the mines there are fully opened; but such is the case at present, and will continue to be for some time to come. Government might as well tax the miner 5 per cent. upon all the money he expends in running tunnels, sinking shafts, etc.—in fact, it might as well do directly what it is really indirectly doing—shut up entirely a large proportion of the non-dividend-paying mines in the State, and put an effectual stop to any further developments. If the tax is levied it will be paid; but the first act of a subsequent Congress, after witnessing its effects, will be to repeal it.

Park.

An extensive park has been laid out in American City, Nevada Territory.

City Stock Reports.

Sales of Mining Shares

For the week previous to Saturday, April 23, 1864.

Mining Gossip.

EDITED BY.....FRANK WARDDELL.
FOR THE MINING AND SCIENTIFIC PRESS.

Attention, Secretaries and Trustees!—We desire to call your particular attention to a very important fact, which we know you will say, after investigation, is to your interest and to the interests, financially speaking, of the different mining companies you represent. It is respecting the difference between the terms of advertising in the Mining and Scientific Press and those charged by papers which take no special interest in mining. The fact is now becoming apparent to the Trustees and Secretaries of mining companies, as our extended columns, filled with their advertisements, go to prove that they are heartily tired of the enormous rates charged by the papers in question, and have come to the wise conclusion that the Mining and Scientific Press is the only legitimate weekly medium through which to do their advertising. They further know that we are acknowledged by the mining community as the leading mining paper upon this coast. We are now established upon a sound and reliable basis, and should thus receive all the aid that such a paper deserves, especially from Trustees and Secretaries.

Skedaddled.—A prominent broker, so it is said, who has for a long time been connected with one of the principal stock boards of this city, took his departure rather suddenly, and very unexpectedly to many, on the steamer St. Louis, which left this port on the 23d inst. It seems, however, that some of his friends had heard of his intended trip, and as they entertained towards him much brotherly affection, (especially as far as unpaid bills and borrowed money was concerned), caused dilligent search to be made prior to the steamer's departure; but, notwithstanding the combined shrewdness of deputy sheriffs and detectives, he managed to make good his escape, thus leaving many brokers and others to mourn his unceremonious departure.

A Dialogue.—Scene on Montgomery street, near Merchant. Conversation between a spirited, go-ahead, never-despoading broker, and a cross old gentleman, who was a heavy purchaser in Wide West, Chollar, and similar claims, and lost largely.

Broker, with a smile on his face, approaching the old gent, "How are you, Mr. ——? I have one of the nicest little chances for you to make money, in the way of a mine, and if you like I will take pleasure in *letting you in*."

Old gent raises his specs, takes a good survey of the broker, and says: "Go to the d—l, sir! There has been enough brokers already who have taken great pleasure in *letting me in!*"

Broker makes his exit, with a flea in his ear.

Santa Rosa M. Co., Virginia.—The following is an extract from a letter received by us, dated April 25th. We publish the same, thinking it may prove interesting to holders of Santa Rosa stock:—"The shaft in this mine is 105 feet deep, and they hope to attain a depth of 200 feet before meeting with water in such quantities as to necessitate the erection of machinery; and ere this 200 feet is attained, they expect to develop a good paying ledge. They are sinking on the upper wall of the ledge, and as they progress the vein and walls become better defined, and the vein rock more favorable in character, and looks more like the ore found in the Comstock lead."

Off Again.—Mr. John S. Hening, Superintendent of the North American mine, in company with Mr. Wm. M. Lent, took their departure for Virginia City on the 26th inst., they having chartered a private conveyance to take them over; and, from personal observation, we can say that they took along with them a good supply of the "essential of life," they seeming determined to have a "good old time," whether on business or otherwise. This style of traveling is what we admire; but which, alas! we poor editors seldom experience.

Something Like.—The Sanitary Ball at Gold Hill, N. T., netted $2,250.

Seneca.—On the 25th inst. they struck good ore in this lead, which, upon being telegraphed to this city, sent the stock up to $22 per share.

A restraining order was received, on Saturday last, by the Mary Ann Company, at Virginia City, to prevent the Uncle Sam from interfering with the work of the Mary Ann Company.

The Union Mining Company, Russ District, contemplate erecting a new sixty-stamp mill, and have already had the survey for their ditch made, and ascertained that they can obtain, within a short distance, twenty feet fall and any quantity of water.

Kit Carson, Gold Hill.—We learn from recent accounts received from this mine that they continue hard at work, and that everything in connection with the mine looks exceedingly favorable; also, large quantities of the stock has changed hands, at figures ranging from $12 to $18 per share.

Bound Off.—A large party of gentlemen have left this city within the past few days, bound for Owens river. Among them were our much respected friends, Messrs. Lindsay, Buchanan, and Stearns. We wish them much success, and trust that they may all soon return home rich.

Fine One.—The Empire Mining Company, situated on Last Chance Hill, Esmeralda, is turning out a splendid description of ore. The shaft on the mine is also being rapidly sunk deeper, and the proprietors feel in the best of spirits regarding their prospects.

San Carlos Mill.—This mill is being rapidly erected, and when completed will be an exceedingly fine one. They intend to build their house of brick, and hope to have the mill under full headway in the course of two months.

Salt Mines.—Some thirty miles from San Carlos, Owens River, on the east side of the Noyo Range, a Salt Mine has been discovered which covers an area of one and a half miles in length by three quarters wide. The salt is in perfect crystallized form The locality in which it is found is called Saline Valley.

Office Removed.—The Bodie Bluff Consolidated Mining Company, on the 26th instant, filed its certificate of removal of business office from Aurora, N. T., to this city.

Silver Mountain Region.—Matters and things in that section have assumed a very lively appearance lately. Several fine buildings have been recently erected and many more are now in the course of construction. Mining interests are looked after with great vigor.

Another Mining Accident.—Mr. John Littlefield of Calaveras county, was lately killed by the caving of a bank, while working his claim on Independence Flat. The deceased was 35 years of age, and for many years an old and much respected resident of that place.

"Up the Flume."—We learn that a private telegraphic dispatch has been received by a party in this city during the past week, announcing the failure of a gentleman who was, at one time, very extensively engaged here in a wholesale and retail business. The gentleman referred to, retired about three years ago, after having accumulated a large fortune, since which time he has been living in New York city, in princely style, driving the fastest stock, etc., and dealing heavily in the buying and selling of gold; being considered one of the prominent gold operators among the fraternity of Wall street. We presume the suspension will be only a temporary one, as it is quite a common occurence for such a class of speculators in New York, to stop payment and resume it again in the course of a week.

Consolidated Lat ast.—Much excitement has taken place in our stock market during the past few weeks among the different friends and advocates of the companies herein mentioned; more especially was the excitement greater on the 25th inst., when it was publicly announced upon the street, that the long contemplated consolidation had at last actually taken place between the Uncle Sam, North American, and Baltic mining companies; they had agreed upon some terms and and all matters appertaining thereto were satisfactorily and amicably settled. These companies, it appears, all claimed the same ground on American Flat, Gold Hill, N. T., and for a length of time have been in litigation, and the expenses attending, we understand, have been enormous. The result of this settlement, however, leaves a company called the Sweezy, who set up a claim as being the first discoverers and workers of the Uncle Sam ledge, out of the arrangement. The Uncle Sam company must make some arrangement with them and include them in the consolidation or compromise, or else the litigation will continue. This case is now pending before Judge North, of Nevada Territory, and will be called up on the 20th of May. A morning cotemporary published in this city, came out (after the result of the consolidation was made known) with a long, flourishing article, and in connection with the details regarding the settlement of the companies endeavors to enlighten the community, with something about the bulling and bearing system, as managed by some interested parties in North American stock, who tried their utmost to depress the same on the market, with the idea of buying it in at reduced rates, and that their plans had been frustrated etc., etc. Now we make some pretention of knowing, generally, what is going on among the bulls, and bears; but we must confess that we have been unable to glean any reliable information respecting this affair, as stated by the local of the daily alluded to. It may be he has the "inside track" on this matter, and we have not; but we hardly think that such is the case.

North American.—There was a rumor in circulation on the street yesterday, to the effect that a larger number of shares than constitutes the Stock of the North American Mining Company, were advertised for sale for non-payment of assessments. After taking the trouble to add up the column of shares, as advertised, we found that the total number advertised is 4,035; there are 4,100 shares in all. It is fair to presume that the list is correct, as holders of shares are very adverse to the payment of assessments until compelled by due process of law. It may possibly be that there has been some carelessness on the part of the officers of the Company, but we are quite sure that if any over issue of shares has been made, the amount is too trifling to effect the stock. Under the late compromise this Company undoubtedly stands on a better footing than ever.

New Iron Works.—The Pacific Iron Works filed their articles of incorporation on the 25th inst. The purpose of the same is to carry on the iron foundry and machine business. The capital stock is $200,000, of one thousand shares at $200 each. The Board of Trustees is composed of W. G. Hoslep and John Stone, (of Tuolumne county), J. M. Wooster, B. D. T. Clough and W. Macdonald, (of San Francisco). The principal place of business of the association will be in this city.

Real Del Monte.—The meeting of the Real Del Monte Company for the election of officers, will be held on the evening of the 2nd of May, and it is conjectured that one of the prime causes for the late depression of the stock has been the "bearing" process adopted by certain parties to secure a controling interest in the way of votes.

Nova Scotia is going wild over the discovery of gold within her borders, and thinks she will rival California and Australia.

Mechanical Department.

Modern Typographic Improvements—The Type-Revolving Principle—"Russell's Automatic Printing Machine."

For a period of more than three hundred years after the discovery of the great principle of obtaining impressions on paper by means of moveable types, no considerable advancement was made in the art of printing. The rude wooden press, worked by hand, and scarcely capable of working 250 impressions per hour, was considered to answer all the requirements of the period antecedent to the present era of civilized progress and material advancement. Few men of learning and attainments thought it consistent with the dignity of scientific investigation to turn their attention to the development of an art which was destined more than any or all others to stimulate the advancement of civilization and aid the enlightenment of mankind. If Dr. Franklin, for instance, had, in connection with his other scientific labors, devoted his great talents toward the improvement of his own profession, he would have better earned his title as a benefactor of mankind. Far be it from our purpose to undervalue the efforts of those who labor in the fields of abstruse science and philosophical inquiry; but in the mechanical discoveries and labor-saving improvements of modern times is to be found the true secret of our great material prosperity. To knowledge and the mechanical arts, more than to any political dogma or religious creed, do civilized nations owe their present advancement.

About the commencement of the present century, the increase of population and the gradual dissemination of intelligence among the heretofore ignorant masses, created such a demand for facilities of rapid printing, that the clumsy presses of the time were found inadequate to turn off the requisite circulation of certain leading English journals. To meet the demand, the dawning inventive genius of the age was brought into requisition, and the result was the invention of several kinds of machine presses, inadequately answering, it is true, the purpose designed, but still possessing great advantages over the old process. Additional improvements were made from time to time, until presses were produced that would print from two to four thousand copies per hour upon one side of the sheet.

Nor was American talent idle the while. About thirty years ago, Seth Adams of Boston patented his bed-and-platen hook-printing machine, the best for doing *good work* that has ever been devised, although not so fast as some others. Messrs. R. Hoe & Co. also constructed an improved iron hand-press—this style of machines being still indispensable to almost all printing offices for small editions, and a variety of work unsuited to power-presses. To American genius the world is also indebted for the best styles of small jobbing presses, many of which are models of neatness and efficiency.

The invention of the "composition roller," which is indispensable to all machine presses, has erroneously been claimed by our countrymen. It was, however, the work of a German in England, about the year 1815, who applied it to a new style of press he was inventing. The press failed, but the roller was soon universally adopted.

The largely increasing circulation of the leading English journal, the London *Times*, stimulated still further improvements, and Messrs. Applegath & Cowper invented their mammoth eight-cylinder press. This marvelous machine was constructed on the rotary principle, and may be briefly described as follows:

A cylinder, some four feet in diameter, set up vertically, upon the periphery of which, and forming about one-fourth of its circumference, is placed the form of types, properly secured, which has been "made up" in such a manner that, although each column is flat, yet the necessary curve is given to the "face" of the whole "form," by making the rules which divide the columns thicker at the "face" than at the bottom. Placed at intervals around this central drum are eight smaller cylinders, to and around which the sheets of paper to be printed are conveyed and carried off by a system of tapes. At each revolution of the main drum the "form" impresses itself in turn upon the paper on each of the smaller cylinders, and of course eight sheets are printed. The "form" receives its supply of ink from rollers, which are stationed between each of the impressive cylinders. Two persons were required at each small cylinder to "feed" and "lay off" the sheets.

This principle was subsequently improved upon by Messrs. Hoe & Co., who placed the large drum horizontally instead of vertically, and applied a series of automatic "flyers," thus dispensing with the labor of persons to "lay off" the sheets. This firm also manufactures presses of from four to ten cylinders, the same principles of construction being applicable to all. The speed of this class of machines is only limited by the ability of the "feeders" to supply the sheets, which is at the rate of about 2,000 per hour to each cylinder. A quite inferior class of work is done upon these presses, as any one is aware who has perused the New York dailies; but they have been necessarily adopted by all those journals whose circulation is so large that they are obliged to sacrifice every other consideration to the paramount one of placing their paper before its readers at the earliest possible moment after their columns are closed.

In contemplating one of these enormous and complicated pieces of mechanism, when engaged in its mighty mission of spreading information among the millions, the beholder becomes impressed with the conviction that human ingenuity has here achieved one of its grandest triumphs, and that mechanical art has no field before it for further improvement in this direction.

But, notwithstanding this apparent perfection, it has been reserved to one of our California inventors to devise a machine which supercedes, in many essential particulars, and as far surpasses those we have just described as they exceed the clumsy contrivances of a by-gone age. We allude to the "AUTOMATIC PRINTING MACHINE," the invention of Mr. Geo. T. Russell, a practical printer, well known in this city and State, of which he has been for many years a resident.

We have carefully examined the models, drawings, and specifications of this invention, and we feel much confidence in predicting for it a decided superiority over any other style of press, provided a due amount of skill and perseverance is exhibited in the manufacture of the machine.

The principle is similar, in some respects, to that of the type-rotating presses, already alluded to; but, as the name indicates, the labor of persons to supply sheets is entirely dispensed with. The paper is printed in a continuous strip, and is carried from one impression cylinder to another in such a manner—i. e. by a geometrical combination of proportions—that it receives the impression of the revolving form at the proper intervals, leaving the requisite white margin between each interval. After the paper is printed on both sides it is cut and piled in regular heaps by ingenious and simple machinery.

The invention also includes a method of moistening the paper before printing, without manual labor.

The inventor claims for this machine the following advantages:

1. *Economy in paper*—this article costing somewhat less when furnished by the mills uncut, and the wastage inevitable in the "feeding" process is entirely avoided.

2. *Economy in manufacture*—A press thus constructed costing only about one-third as much as one of the same number of cylinders of the styles now in use.

3. *Economy of labor.*—The attention of only one person is required from time to time to see that the "color" and "register" run right; all else is automatic.

4. *Increased speed.*—Every motion about the press being rotary, and as it carries along its own paper, instead of depending upon the slow manipulation of "feeders," it is difficult to imagine a limit to the velocity of which it is capable. Judging, however, from the workings of the model, it would seem that the eight-cylinder press may probably be driven at the rate of forty or fifty thousand impressions per hour.

5. *Better work.*—On all fast presses now in use, thin ink is obliged to be used, in order to prevent the paper from remaining on the "form" after being printed, and fouling in the ink rollers, which makes a vexatious delay. In this machine, however, the paper must necessarily come off the "form," no matter how fine or "stiff" a quality of ink is used. A perfect "register is easily obtained, and, if required, the paper can be "dry-pressed" by passing it between steam-heated rollers before cutting, which would restore the gloss, which is much impaired by the process of wetting and printing.

Economy of space and noiselessness are among the minor advantages claimed.

We are not at present at liberty to more accurately describe its workings, but hope soon to lay before our readers a properly illustrated description of this wonderful *California Invention*.

The talented inventor, having taken the preliminary steps to secure patents in the United States and European countries, through our PATENT AGENCY, went East, some weeks since, for the purpose of bringing his improvement to the notice of press manufacturers and newspaper publishers. We commend him to the favorable consideration of all with whom he may have dealings, and predict for him the success his invention merits.

[Written for the Mining and Scientific Press.]

Practical Mining—Position of Lodes—Another Answer to Our Mining Problem.

MESSRS. EDITORS:—I have awaited with impatience the solution of the mining problem which you published on the 5th ult., hoping to gain something new. The response of "J. P." does not satisfy me. Either he is wrong, or I do not understand him. The law governing the "throw" of a lode intersected by a dike or cross vein, is correctly stated; but, in my judgment, the deductions therefrom are, in part, far from right. I hope I state my views with diffidence, as I have had, comparatively, but small experience in "mining engineering," although I may say I have been a miner twelve years.

To the point: Suppose you were driving on the lode from E.N.E. to W.S.W., your progress is stopped by the cross vein, the obtuse angle, formed with the plane of the level by the cross vein, is to the left; as the portion of the lode thrown out is to be discovered on the side of the obtuse angle, the "throw" is a left-handed and not a right-handed one, as "J. P." states. If you reverse the course, say drive E.N.E., the result is the same—the "throw" is to the left.

"J. P." says he would drift S.E. I infer that he would thus drift before he drives through the cross vein, since he says (I quote from memory—I have to lend my PRESS) that, perhaps for *safety*, he would first drive through the cross vein. Should he drive S.E. before he drives across, he would never reach the lode. We will suppose the level to have cut the cross vein, and continued on in the direction W.S.W. a certain distance; then in such cases driving S.E. would strike the "thrown" part of the lode; but that would be the longer way, as the two sides of a triangle are greater than the other.

The plan I would suggest is this: Upon driving through the cross vein, I would hug the vein on its west wall, and drive in the direction of its strike, S. 15° W. The distance to drive would be determined by the obtuseness of the angle.

I congratulate you upon the success of the PRESS. To those who are engaged in copper mining, the letters of your traveling correspondent are above all price. They have inspired with hope hearts hitherto heavy with assessments, and given a new impetus to a pursuit destined to rejuvenate the mining interests of our State. I hope he will pay our county a visit.

GRASS VALLEY, Nevada Co., April 20, '64. M.

THE ARGUS, a new weekly, published by John McComb, made its appearance last Saturday. It is peculiarly "English" in style, about one-half the size of the PRESS, and looks creditable. The editor thinks there is a wide field for another mining journal in this community, and so it would seem; but, alas, experience teaches that mining newspapers, like mining lectures—no matter how worthy or eloquent—are only appreciated by reflective minds, and not apt to be over-burthened with genuine patronage. However, we wish our neighbor good fortune and a happier experience than we can possibly anticipate. The *Argus* is finely printed, at the office of Wm. P. Harrison & Co.

BROWN'S VALLEY, Yuba county, still continues to attract considerable attention. Its mines and mills continue to give out an abundance of the precious metals. We note the fact with all the more pleasure for its being so near to the commercial center of the Pacific coast—about twelve miles from Marysville.

Patent Department.

A Quartz Mill.—We have seen, this week, in actual work, a new crusher which was fed with rock that would pass through a half-inch mesh, and turning out fine work that will compare with the tailings of ordinary pans, at the rate of half a ton per hour. It is a combination of the vertical crushing rollers of the inventor, Mr. Scovill, with a Chili mill, which grinds against the surface of the trough as well as on its bottom; it has also a further trough for amalgamating the gold. It requires from 6 to 8 horse power, and works with remarkable steadiness. It stands on a space 8 feet square. The weight is about 7 tons, but the whole machine may be set up by three men in as many days, as there is no necessity for any expense in foundations. Its price is $2,500. It is now on exhibition at Steen's Novelty Iron Works, on Fremont street.

A New Clock, with but one wheel, and a simple attachment of levers and springs, has recently been constructed by Mr. Otto Weidero, a watchmaker of this city, which, it is claimed, is the most perfect timepiece yet invented. Mr. W. thinks it will work an entire change in the manufacture of timepieces. A model will soon be in operation at his window, on Montgomery street. Most of our readers will recollect a similar invention made by this gentleman two or three months since. That was also constructed on a novel principle, and worked much after the manner of a low-pressure steam-engine. Mr. Weidero is one of the most ingenious workers in his delicate line of business, on the Pacific coast.

Breathing Apparatus.—At a late meeting of the French Academy of Sciences, M. Galibert described an apparatus for securing free and complete breathing to persons obliged to stay some time under water, or to penetrate into places filled with deleterious gases or smoke. This apparatus consists of a piece of wood, having the form and dimensions of the human mouth when open. To this piece of wood two India-rubber tubes are fixed, of any length, according to the exigencies of the case. The man engaged in the operation is further provided with a nose-pincher, or instrument for compressing the nostrils, so as to prevent the introduction of deleterious gas or of water, as the case may be. The operator puts the piece of wood into his mouth, and puts on the nose-pinchers; he stops one of the orifices with his tongue and inhales pure air with the other; after which he shifts his tongue to the latter orifice and exhales his breath through the other. He continues thus regularly shifting his tongue from one orifice to the other, in the order of the inspirations and the expirations; but even a mistake would be of little consequence. A man easily learns the use of the apparatus by a few minutes exercise. This contrivance has the merit of requiring no preparation, thus affording a speedy means of giving assistance in the case of fires or of suffocation by water or gases. It might also be used in medicine for the complete immersion of patients in a bath, which might sometimes be advisable.

Great Improvement in Nail Making.—M. Gustafson, a Swedish inventor, has contrived an ingenious machine for the manufacture of nails. Iron nails hitherto used have either been forged or cut by machinery from sheet iron or iron wire. Thus made they are necessarily costly—the first named by reason of the slowness of the manufacture, and the two latter by using too expensive material. This new machine supersedes all others by combining in itself the process of rolling, pointing, cutting off and heading, and produces from bar iron an excellent nail at a very low cost. The rapidity with which the nails are produced by this invention is truely marvelous. Using bar iron three-eighths of an inch square, the machine, with the labor of only one operator, will turn out in ten hours as many as fifteen thousand three inch nails. The nails produced are of the very highest quality, being compressed by the rolling process, and always having the grain of the metal in the direction of the length. They are formed with fluted sides, which is the most advantageous of all forms, but very expensive to produce by other process hitherto resorted to. By slightly altering and readjusting certain parts of the machine, different sizes and forms may be produced.

At a recent scientific lecture, the experiment of extinguishing petroleum lamps by a single note sounded on a brass trumpet, was tried successfully.

The Ram Dundenberg—Casting of Her Screw Propeller.—The screw propeller for the ram Dundenberg was successfully cast on Saturday, March 18th, at the Ætna Iron Works, New York, in the presence of a large number of engineers and officers of the navy. The composition of the screw is 88 parts of copper, 10 of tin, and 2 of speltor, and is the largest ever cast of like material. It is 21 feet in diameter, has 4 blades, and will weigh about 32,000 lbs. The process of casting, which occupied about two minutes, was a most interesting sight.

A New Locomotive.—At the last sitting in Paris, M. Combs describes a new system of locomotives now in use on the Northern Railway, so constructed as to surmount considerable declivities, and to describe curves of a small radius. These engines have four cylinders and six axletrees, divided into two groups of three each, moved by the pistons of one pair of cylinders. The wheels are so small that the fire-place of the boiler extends beyond them, whereby the fire acquires the unusually large surface of 3:33 square metres. The engines are provided on starting with 8,000 kilogrammes of water, and also 2,200 kilogrammes of combustibles; their total weight is 60,000 kilogrammes, equally distributed on the six axletrees. In order to facilitate the describing of small curves, a little play is left between the flanges of the wheels which keep the train between the rails and the rails themselves; moreover, the axles have some play in their sockets. By these various contrivances combined, the new engines have mounted gradients of 25 millimetres, and described curves of 60 metres radius.

The Mining and Scientific Press Patent Agency.

OFFICE, 57, GOVERNMENT HOUSE, SAN FRANCISCO.

Information About Obtaining Patents.

The Patent Law Amendment Act, of March 4th 1861, and March 3d 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be withheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent? A positive answer to this question is only to be had by presenting a formal application for patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the Mining and Scientific Press. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enabled to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or uncommon decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his had been used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian, Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of governments that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charges for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $30. If the patent is granted no further agency expenses ensues.—If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and papers and specifications cited in references, and we report the result as early as possible to our client. For this service we make no charge. If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The laws requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimensions; it should be neatly made, of hard wood or metal, or both varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express, or otherwise, to our address, namely: Dewey & Co., Mining and Scientific Press, rooms 56 and 57, Government House, corner of Sansome and Washington Streets, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail—The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due, and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued, the applicant will be notified to remit the last installment of the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicants case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-marks, labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statuary, or compositions in alto, or basso relievo, new dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most extensive character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the tariff of fees established by law:

On every application for a design, for 3 years and six months...	$10
On every application for a design, for seven years...	15
On every application for a design, for fourteen years...	30
On every caveat...	10
On every application for a patent...	15
On issuing each original patent...	20
On filing a disclaimer...	10
On every application for a re-issue...	30
On every additional patent granted on a re-issue...	30
On every application for an extension...	50
On the grant of every extension...	50
On appeal to the Commissioner from Examiners-in-chief...	20
On every appeal to the Judges of Circuit Court, D. C...	25

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunction from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the storekeeper, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

In rejected and other cases, the new law provides for an appeal from the Examiner-in-chief to the Commissioner in person, on the payment of a fee of twenty dollars. A further appeal may be taken from the decision of the Commissioner to the U. S. Court, of the District of Columbia. These appeals are heard by any of the Judges before whom the applicant elects to bring the case. No Jury. All the papers, models, etc., are sent by the Commissioner to the Judge, who then reviews the case, and either sustains or reverses the Commissioner's decision.

The party taking the appeal pays an additional fee of twenty-five dollars. The Judge appoints a day of hearing. The applicant can appear in person or by counsel to state his case and file a written argument. Five days are allowed the opponent to put in an answer, and a similar period to the appelant for a closing reply.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals, and our services are rendered on moderate terms.

Office in the Government House building, Northwest corner of Washington and Sansome streets, rooms No. 56 and 57, up stairs.

Terms of Subscription:

One copy, per annum, in advance,.....$5 00
One copy, six months, in advance,..... 3 00

☞ For sale by Carriers and Newsdealers.☜

Terms in Advance.—Having adopted the cash system, ALL payments for subscriptions must be made in advance. If old subscribers find their paper discontinued at any time, don't stop to grumble about it, but send in the cash for another year. "Equality is Justice," and we shall administer this doctrine to all our patrons, as well as "the rest of mankind."

For Sending East, no more valuable or appropriate publication can be selected than the MINING AND SCIENTIFIC PRESS. For sale by the principal newsagents.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past year.

San Francisco:

Saturday Morning, April 30, 1864.

A STRANGE FISH.—The fish styled by the reporters of the daily papers "Wolf Eel," "Sea Serpent," etc., which was on exhibition yesterday in front of McDonald's restaurant, corner of Leidsdorf and Clay streets, and which attracted so many curious visitors, was taken by some Italian fishermen near the Farralones. It measured about four feet and a half in length. Though it resembles very much the wolf fish or *Annarrhicas Vomerinus* of Massachusetts Bay, it is a distinct species, known to naturalists as *Annarrichys Ocellatus*. It is peculiar to this coast, and lives about rocky bottoms or shores; is supposed to subsist principally upon shell-fish and grows to the length of six feet or more. Though this fish is repulsive to many, it is cousidered by those who have tried it a very delicate dish for food. The first specimens known to naturalists were caught in San Francisco Bay, by some Italians, in 1855, and reported and described by Dr. W. O. Ayres, to the California Academy of Natural Sciences. From this report, Dr. Ayres has kindly permitted us to make the following extracts:—

"The greatest depth is at the origin of the dorsal fin (near the back of the head) and is contained nineteen times in the length; thickness, one half the depth; the depth tapering to a point at the caudal extremity. Teeth strongly developed. In the upper jaw four (in one specimen only three) stout canine teeth; behind these a transverse row consisting of three or four smaller, but of similar form; and on each side an imperfect row of three or four smaller ones extending back; all of these are on the *intermaxilaries*. The entire anterior portion of the *vomer* is covered with a mass of large, close set, rounded, grinding teeth. Each palatine bone is provided with a firm row of teeth, like those on the vomer, but smaller. In the lower jaw are four or five strong canine teeth in front, similar to those above, and interlocking with them as the mouth closes; all the jaw posterior to these is filled with strong molar teeth."

"The dorsal fin, arising almost at the back of the head, continues to increase for nearly a fourth of its length, attaining thus a hight equal to the head of the fish. A little posterior to this the elevation becomes less, and the fin gradually decreases in hight until near the caudal extremity, where it has only one-third of its greatest elevation."

"In color perhaps no more beautiful fish than this has yet been found in our waters. It is elegantly mottled with light ashy grey, and dark olive green, disposed in irregular rings, lines and blotches, which cover the head and body; they extend also upon the dorsal fin, which, in addition, bears a remarkable row of large, brilliant, sharply defined ocellations; these are of such size as to occupy about half the hight of the fin, each consisting of a light ring, enclosing a much darker space. At about the middle of the length, these rings (in one specimen) became blended, forming thence a black band, with a line above and below, which extends to the caudal. The *anal* is dark and brown, (black near the tail,) with a border almost white in its whole length. These notes of colors are taken from a young specimen only twenty inches long—In another, fifty two inches in length, the colors, though not essentially different, were less brilliant."

"A. Ocellatus is apparently rare. Only two specimens have been seen, which by a singular coincidence were brought into market within two days of the same time. None of the fishermen had seen the species previously. The stomach of the larger specimen contained fragments of a Sea-Urchin apparently a *Cidaris*, so that their habits appear to be like those of the *Annarrhicas*. Both specimens were taken in the Bay of San Francisco."

The specimen now in the city is in the hands of Dr. Blake, who has placed it in a bath of alcohol preparatory to its being forwarded to the Smithsonian Institute.

MINING SHARE MARKET.

The transactions of the Mining Share Market still continue to show a great falling off from the average of last quarter's business. This depreciation, however, is rather attributable to a neglect of first-class shares, from want of capital for investment rather than from any lack of confidence in the mines themselves. As a general thing, the speculative mines are showing a degree of improvement which is quite satisfactory. The transactions of the week foot up at $820,526.

Ophir has still further declined with but little business. Sales of six feet were noted on Monday, at $1,425@1,450, since which time it has been quiet. It is freely rumored that no dividends will be declared by this Company for at least two months to come.

Gould and Curry has been inactive at from $4,490 @4,550—about last week's figures.

Chollar shares are more in favor at an important advance. Inactive, last week, at $400. A report received on Monday of a favorable strike at the mine sent the stock up suddenly to $465 and $500; it subsequently fell back to $430, at which figure it closed at yesterday's board.

Daney advanced to $115, the middle of the week, but subsequently declined to $104 at yesterday's board.

Bullion was heard from yesterday at $68@71; Knickerbocker, at $36; Charles Caney, at $9; Independent, at $55. Burnside is inactive, at previous quotations—$10@13.

Central American continues to fluctuate from $12 @25. Pride of the West has slightly improved in favor, and is quoted at $75@80.

Imperial opened the week at $175, and closed at $160.

North Potosi has met with considerable business, at rates fluctuating according to the various estimates placed upon the final result of the suit with the Savage.

Potosi has met with a single purchaser at $850. Sacramento & Meredith has sold at $50, a slight decline from last week.

Nevada, J. G., is in less request at slightly declining rates; it may be quoted from $75 to 87.

Uncle Sam has slightly declined, since the consolidation arrangement. The same result has been noticed in the case of its associates the Baltic and North American. This has been entirely unexpected, as an advance was confidently expected.

Burning Moscow maintains about even figures with last week, but with much less business. It closed yesterday at $109, with an upward tendency.

Bajasette and Golden Era has been heard from at $35; Adriatic, at $8@11; California Tunnel, at $23; Mary Ann from $95@110; Lafayette at $12; Sweet Vengeance (a new comer), at $20; Kohler Bros, at $26.

Lady Bryan has maintained about its last week's figures, but with a large decline in the amount of business transacted.

Baltimore American has been in less demand, but at more uniform rates than last reported. It may be quoted firm at $50.

Seucca, which has been comparatively quiet for some time, at about $16, took a sudden start on Wednesday, in consequence of the reception of telegraphic advices of a favorable strike at the mine, and went up to 27, and subsequently still further advanced to 31, at which figure it closed.

Blue Ledge is steady at previous figures. The mill is expected to be ready to start on Monday, when the actual value of this mine will soon be ascertained.

We quote Shoshones at 2¾; Santa Rosa at 8½ Buckeye at 16; Laurel Hill at 1; Josephine, Coso, at 3½@4; Union, Russ District, at 1; Coso at 3¾; Crockett, Con., at 8.

Among the new comers we quote Index (copper) at $9@9½; Fair Haven at 3½; Larned at 1¾; Good Return at 1¾@3½; Green, Gold Hill, at 5½ @8½; Eclipse at 13; Johnson at 19; Mountain, No. 1, at 7½; Golden Age and Empire 32@35.

Mina Prieta has sold at $75; Codicia at 6; Melones at 38; Grass Valley at 45; Justice at 80; Michigan 31; Mount Davidson 2; Josephine (copper) 3.

Real del Monte has again become quiet. We notice sales of only 384 shares, at about last week's figures, from $68@83, closing at the former figure. The affairs of the Company appear to be assuming a favorable aspect. Bullion still continues to come in; another lot of $12,500, the result of one week's work, is now on its way to this city.

Wide West still continues at last week's figures. Reports from the mine are decidedly favorable.

Utah has been sold at from $24@39.

North Star, Reese river, has met with buyers at $56; De Soto, at 30; Lancaster, at 15; and Cuba, at $4.

SIERRA.—Our correspondent, J. E. Clayton. M.E., has recently returned from southern Sierra, where he has been examining various mines. He reports that rich section of new quartz discoveries one of exceedingly rare features. The readers of the PRESS may soon expect to hear something further about this district from him. We are under especial obligations to our excellent friends Kellogg & Cutler, of Alleghany, and M. A. Singleton, of Minuesota, for subscription lists forwarded. Parties who feel an interest in the success of our journal should emulate their example.

VENOUS TRANSFUSION.—A late member of the Leipsig *Medical Gazette* mentions a recent case of the successful transfusion of animal blood into a human subject. Twelve ounces of blood from the veins of a lamb were injected, with benefit, into the veins of the patient.

DISTINGUISHED STRANGER.—Captain Chonsoff, of the Mining Bureau of the Russian army, has for several days past been visiting and inspecting the various mining towns of Nevada county. He returns to San Francisco for the purpose of sailing on the Russian vessel now in the harbor.

POISONING FROM VULCANITE.—A writer in one of the English medical journals reports several cases of disease of the mouth, attributed to the red sulphuret of mercury in the vulcanite employed for plates in dentistry. A correspondent of the San Francisco *Medical Press*, says that the quantity of the mineral used in coloring the vulcanite is so small, and the combination so capable of resisting the action of any agent likely to come in contact with it in the mouth, as to render the statement exceedingly doubtful. The correspondent is informed by an intelligent dentist that experiments are in hand tending to the substitution of aniline as a coloring matter, which will obviate the possibility of mischief from the use of vulcanite.

Record of New Incorporations.

The following is a record of the names of the companies, location of the claims, and the names of the Trustees mentioned in the articles of incorporation, filed in the County Clerk's office, in this city, since our last report:—

Granite State G. & S. M. Co., Amador county, Cal.; W. J. Andrews Wm. Smith, Stephen Otis, A. C. Perkins, Thomas Dillon.

MINING AND SCIENTIFIC PRESS.—Having missed a few numbers of this excellent paper, we feared it had ceased to exchange; but as it has again resumed its regularity, we are a little easier on the subject. The MINING PRESS is an almost indispensable companion to the miner and mill man, and when in our peregrinations we find it in the cabin of the one or the office of the other, we look for, and invariably find, a superior intelligence and more satisfactory working than where it is unknown, and its precepts ignored. We would dislike to be deprived of it, either as editors, miners, millers, or mechanics.—*Reese River Reveille.*

Mr. Jarvis Jewett is our duly authorized advertizing agent and collector in this city.

MINING NOTICES—APRIL 30th.

SAGE BRUSH FOR STEAM MILLS.—J. C. Fall, Superintendent of Fall, Price & Co.'s mill, is exultant over a discovery made this week. Not being crowded with work, he concluded to run through some rock which he was aware must be worked economically, or he would not keep even. It would not do to use $10 or $12 wood for the boiler, in which a good heat must be kept up for amalgamating. He bethought bim of the common pest of the country—sage brush—and set a man to work cutting and an Indian to packing it in. He soon found that this brush makes an exceedingly good fire for the purpose. It requires almost constant feeding, but it keeps up a rousing heat. Since that experiment he has used no other wood, and the further trials confirms the estimation at the close of tbe first day's trial—and tbat is, that $4.50 expended in procuring sage brush, is equal if not superior, to $12 invested in cordwood. Fall is much rejoiced at the result of his experiment, and may well be, for it is destined to be an important saving if this brush will serve the purpose of wood. The sage brush grows in such abundance over the flats and mountain sides for long miles about as to be a great annoyance. If it can be made to serve so good a purpose, it will uot be regarded with the contempt it has hitherto; but will look up in the world, and say to the pine and the tall cedars, "Wbat a demand there is for us trees!" Mr. Fall thinks he has now good assurance of fuel in abundance for tbe new steam engine to be put up at the mill this season.—*Humboldt Register.*

All wbo have crossed tbe plains are well acquainted with the valuable properties of sage brush for fuel. It burns freely, and makes a very hot fire. Mesquit is also valuable for making steam. It is more difficult to gather, but the fibre is firmer, and it produces a more intense beat than sage brush. It will be recollected by many of our readers that about one year ago one of our correspondents in the southern portion of the State furnished some interesting particulars with regard to the use of mesquit for making steam.

EVERY DESCRIPTION OF IRON AND BRASS MACHINERY, the Best and Most Economical, manufactured in the State of California, will be furnished with dispatch at the Miners' Foundry and Machine Works, as:

Steam Engines and Boilers, Flour, Saw and Quartz mill machinery, Mining Pumps, Amalgamators, Retorts, Etc., Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections, designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

, Parties desiring to test their ores practically, in small quantities will be afforded ample facilities, free of cost.

All parties desiring accurate and highly finished drawings and Superior Machinery, at most reasonable rates are cordially invited to call before contracting elsewhere.

IMPROVED WATER-WHEEL,

—PATENTED BY—

John Tyler, West Lebanon, N. H.

GIVING THE MAXIMUM POWER WITH THE MINIMUN COST—HAVING THE FOLLOWING AS SOME OF ITS ADVANTAGES OVER OTHERS—GIVING THE BEST PER CENTAGE OF WATER USED, DURABILITY.

It runs Equally as well IN Back Water as OUT.

IT IS ADAPTED TO HIGH HEADS OR LOW—IT IS NOT LIABLE to get out of repair—it can be put to running by any Machinist in a very short time—It is the steadiest running and easiest regulated wheel in use—There are now some 60 of them in use in the United States and Canadas, running under all heads, from 4 to 80 feet, and giving universal satisfaction. Address

SMITH & HANSCOM,

WHEELER'S

Amalgamating and Separating Pans

IT IS ACKNOWLEDGED BY ALL WHO HAVE EXAMINED THE principles and witnessed the operation of these Pans, that they are decidedly superior for triturating and amalgamating purposes to any other in use.

The most important principle connected with the operation of these Pans is the separation of the triturating process from that of extracting the amalgam from the sand. The chief cause of loss of the precious metal arises from the passing off of the same in combination with the quicksilver, during the process of trituration, and in cleaning up. By the introduction of the Separating Pan to follow the triturating, this loss is entirely avoided. In working these machines there is no appreciable loss of quicksilver, and hence none of the precious metals.

Where these Pans have been introduced and operated by the side of others on sands from the same vat, the Wheeler Pans have uniformly gained a large percentage of metals, over its competitors, as well as a still larger percentage in the amount of work performed.

, These Pans may be seen in daily operation at the Miners, Foundry on First street, San Francisco, where all interested are invited to call and examine for themselves.

no16-tf ZENAS WHEELER.

To Quartz Miners.

ALL PERSONS INTERESTED IN MINING MACHINERY ARE invited to call at Donahue's Foundry and examine my improved Amalgamator. It is unquestionably superior to anything now known for amalgamating Silver and Gold. It works 1000 pounds at a time, and will amalgamate over three tons a day. By the motion of the revolving muller, the pulp is drawn through its centre and passes under it, between the grinding surfaces, to the circumference; from whence it passes again over the muller to the centre, through the holes and between the grinding surfaces to the circumference as before. Thus a constant circulation of the pulp is kept up, bringing the particles of ore again and again under the muller, and reducing the whole mass to an impalpable powder.

No quicksilver lies between the surfaces to be ground, but at the circumference and centre of the pan where the metal must pass through it as the pulp circulates.

A patent was granted for this Amalgamator in December last, and all persons are again warned against purchasing machines made at the Miners' Foundry, called "Wheeler's Amalgamator," as they are an infringement on my patent, and a suit is now pending in the U. S. Circuit Court against the parties infringing. My Amalgamators can be seen running at Donahue's Foundry, where all can judge of their operation and the very superior style in which they are being manufactured. THOMAS VARNEY.

To Druggists and all Prescribing for Neuralgic and Nervous Cases.—Your attention is called particularly to the efficacy of WATTS' NERVOUS ANTIDOTE for the above. Feelings of humanity, independent of pecuniary considerations, would prompt you to recommend it in all cases of Neuralgic Pains, Face Ache, from detective teeth, and the General Wasting Away and Debility of the Nervous System, if you could have the assurance that this was what it is purported to be—THE GREAT RELIABLE TRANQUILIZER AND RESTORER OF THE SYSTEM. It has been repeatedly prescribed in cases of excessive drinking, on the verge of Delirium Tremens, and even while laboring under its distressing influence, with astonishing results. It contains no preparation of Opium or Valerian, and is never accompanied with the unpleasant sensation always experienced after taking successive doses of them. It is also the best Soothing Syrup in use. Patients have taken Watts' Nervous Antidote many months in succession, and experienced no unpleasant effect whatever—while the same continued use of many other popular remedies has completely shattered the system.

PRATER'S
PATENT CONCENTRATOR.

THE PROPRIETORS OF THIS NEW CONCENTRATOR, HAVING completed arrangements for its manufacture at the Fulton Foundry, in this city, now offers it to the public, with the fullest confidence that for the purpose for which it is designed

It Has No Equal in Use.

The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use. It is now in operation at
WHEELER & THAYER'S REDUCTION WORKS,
NORTH BEACH, SAN FRANCISCO,
To whom the Proprietors are permitted to refer, and where all interested in mining are respectfully invited to call and examine the best Concentrator in use.
This machine is now running on waste sands, from which it is taking out an average of 3½ pounds of quicksilver for each ton of sand. Orders or letters of enquiry may be addressed to
HUNGERFORD & PRATER, Proprietors.

Steam Engines of Scott's Patent,
Can be furnished of any size, and of high or low pressure. These Engines combine so many points of decided improvement in their simplicity of construction, and in the economy of fuel for running them, as to make them superior to all others. One can be seen in operation at the works, where all information respecting them can be obtained.
16v8 THOMAS SCOTT & CO.,

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION OF THE Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from
Gold and Silver Ores,
Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First street, San Francisco.
These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

And in accordance with law, and an order of the Board of Trustees, made on the 6th day of April, 1864, so many shares of each parcel of said stock as may be necessary, will be sold at the sales-room of John Middleton & Son, No. 400 Montgomery street, on the 16th day of May, 1864, at the hour of 12 o'clock M. of said day, to pay said delinquent assos sment thereon, together with costs of advertising and expenses of the sale.

T. L. BIBBINS, Secretary *pro tem.*

Office, 302 Montgomery street, San Francisco, Cal.

San Francisco, April 16th, 1864. 16-4t

Before Cutting the Leaves of this journal, stitch each No. through the back, or fasten with a large pin, and you will have a paper in the most convenient form possible for reading or reference

Billett Gold and Silver Mining Company—Office, 509 Clay street, San Francisco, California, April 16th, 1864.—Whereas the Board of Trustees of the Billett Gold and Silver Mining Company, at a meeting duly called and held on the 5th day of March, A. D. 1864, directed, by vote, that an assessment of twelve and one-half (12½) cents per share be, and the same was thereby levied and assessed, on each and every share of the capital stock of the said Billett Gold and Silver Mining Company, payable immediately, in gold and silver coin of the United States, and that the Secretary of the said Billett Gold and Silver Mining Company sell the delinquent stock, first advertising the same for thirty (30) days, according to law, after causing notice of said assessment to be published according to law and the by-laws of the said Company; and whereas notice of said assessment has been published according to law and the order aforesaid, and the following named shareholders have made default in the payment of said assessment in the number of shares held by them, and set against their names respectively, as follows—to wit:

	Shares.	Amount.
A. Bryant	149	$18 63
Levi Lee	30	3 75
James Lefferts	5	62
M B Miller	20	2 50
A T Nesbitt	10	1 25
James Billett	217	27 13
C A Moore	278	34 75

And in accordance with law, and an order made by the Board of Trustees on the 12th instant, so many shares of each parcel of said stock as may be necessary will be sold, at the office of the Company, in the city of San Francisco, at 12 o'clock M., on SATURDAY, the 14th day of May, 1864, to pay said delinquent assessments thereon, together with costs of advertising and expenses of sale.

J. F. STIRLING, Secretary,
No. 502 Montgomery street, Room No. 1, 3d floor.

San Francisco, April 16, 1864. 16-td

Mount Zion Gold, Silver and Copper Mining Company, Clayton District, Contra Costa county, Cal.

Whereas, the Board of Trustees of the Mt. Zion Gold, Silver and Copper Mining Company did, on the 5th day of March, 1864, levy an assessment (No. 11) of twenty-five cents upon each and every share of the capital stock of said Company, legal notice of which assessment has been given to the Stockholders thereof; and whereas, the said Board of Trustees did, on the 5th day of April inst., declare delinquent all of said assessment then remaining unpaid, and order the same advertised for sale, in accordance with the laws of the State and the by-laws of the Company; therefore, notice is hereby given, that there will be sold, at the office of the Secretary, No. 240 Montgomery street, on MONDAY, the 16th day of May, 1864, at 12 o'clock M., a sufficient number of the shares of the capital stock of said Company, standing in the names of the following Shareholders respectively, to pay the said assessment, together with the costs of advertising and sale of the same, unless said assessments and costs of advertising shall have been sooner paid, to wit:

Name.	No. Cert.	No. Shares.	Amt. Due.
Paul Shirley	160	100	$25 05
Paul Shirley	161	25	6 20
